The 4 metre Convention organised by the Bromsgrove and District Amateur Radio Club, which was to have taken place on the 15th of June, has had to be postponed. It may now take place in September or October.

Jasmine Marshall, G4KFP, would like to thank everyone who participated in the Windmills and Watermills Special Event Day, which took place on the 12th of May. The event was run on behalf of the Windmills and Watermills Section of the Society for the Protection of Ancient Buildings. Each of the 31 stations active on the day offers a special QSL card featuring a line drawing of the mill and its history. A certificate is available for anyone contacting 10 or more of the stations. The event was organised at short notice, and it is hoped that next year even more mills will be on the air. For more details of the certificate, or if you are interested in participating next year, please contact Jasmine Marshall, G4KFP, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet:

From Togo, DL7ALM and DL7UBA will sign 5V7ML and 5V7HR from Monday the 3rd until the 18th of June.

From the Aland Islands, a German group plans activity from Friday the 7th of June for one week. Callsigns are OH0JWH, OH0JWL, OH0/DL4FAN and OH0/DL1ZBO. Operation will be on all bands and modes, including 6 metres, where the callsign will be OI0JWH.

And from Niue JA3IG is active as ZK2YY until Tuesday the 4th of June. He then goes to Tonga, where he plans to sign A35IG on Wednesday and Thursday, the 5th and 6th of June.

Now news of some special event stations:

GB8SF is being operated by the Scarborough Special Events Group today, the 2nd of June, as part of the Scarborough Fayre celebrations. Activity is around 3725kHz SSB, HF CW, and on 2 metres and 70 centimetres.

GB4BKF is on the air today, Sunday the 2nd of June, from the Basingstoke Kite Festival at the Down Grange Sports Complex in Basingstoke. The station is on all HF bands as well as 2 metres. The kite festival is open to the public and talk-in is on 2 metres channel S22.

GB800SA is being operated by members of the Stratford Radio Club to celebrate the 800th anniversary of the founding of Stratford-upon-Avon. The call will be in use until the end of the year. It is also exactly 400 years since William Shakespeare wrote 'A Midsummer Night's Dream' and 'The Merchant of Venice'.

Next the Rally News:

The Spalding Amateur Radio and Computer Fair is being held at Springfields Exhibition Centre in Spalding today, Sunday the 2nd of June. For further details, call 01775 722940.

The Northern Mobile Rally, organised by the Ripon and District Amateur Radio Society, takes place at a new venue - Ripon Racecourse - today, Sunday the 2nd of June. The event features the usual traders and a bring and buy stall. Doors open at 11.00am, or 10.30am for disabled visitors, and talk-in is on 2 metres channel S22.

Next Sunday, the 9th of June, the 27th Elvaston Castle National Radio Rally will take place at Elvaston Castle Country Park near Derby. The event, organised by the Nunsfield House Amateur Radio Group, features over 150 traders, a flea market for private vendors only, and plenty of attractions for the rest of the family. Talk-in by GB2ECR will be on 2 metres channel S22 and on 70 centimetres, channel SU22. For further details contact Ken, G3OCA, on 01332 720976.

The Aldershot Amateur Radio Rally takes place next Sunday, the 9th, at Badshot Lea Sea Cadets HQ, Lower Weybourne Lane, Badshot Lea, near Aldershot. Doors open at 10.00am and for further details you can ring 01252 837860.

On Saturday the 15th of June, the Royal Naval Amateur Radio Society mobile rally takes place at HMS Collingwood, between Fareham and Lee-on-the-Solent. The event features an RSGB bookstall and membership information stand. Doors open at 12.30pm and for further details telephone 01705 379265.

The RAIBC in Northern Ireland regrets that, due to circumstances beyond its control, it will not be organising the Belfast Rally in June this year.

Now for the HF contest news:

RSGB's National Field Day is taking place this weekend, the 1st and 2nd of June, until 1500 UTC today. The contest is on all bands from 1.8 to 28MHz, excluding the "WARC" bands, CW only. The rules are in the September 95 RadCom.

Next some VHF contest news:

The IARU 50MHz Contest is taking place this weekend, and ends at 1400 UTC this afternoon. The rules are in the September 1995 RadCom.

Next Sunday, the 9th, the 70MHz CW Contest takes place between 0900 and 1200 UTC. The rules are in the September 95 RadCom.

And now the solar factual data for the period from the 20th to the 26th of May compiled by Neil Clarke, G0CAS:

Widespread Sporadic E has taken place every day, with very strong signals on 50MHz from Scandinavia to North Africa and Greece. Also, the 28MHz band has been open all over Europe and to South Africa via sporadic E plus trans-equatorial propagation.

Solar flux levels remained steady and averaged 67 units. The 90-day solar flux average on the 26th was 70 units, one unit down on last week. X-Ray flux levels remained at A1 units every day. Geomagnetic activity started at "unsettled" levels, but by the 22nd had declined to "quiet". The average was Ap 8 units.

Now the ionospheric data for Central France. The period from the 17th to the 23rd saw levels decline from 6.8MHz to 5.8MHz by the 20th. Levels then increased and ended at 7.2MHz. The average was 6.5MHz. Darkness hour lows were more stable, and averaged 3.3MHz. The daytime highs took place at 2000 hours every day, except on the 18th and 19th, when they were at 0900 and 1300 respectively. Darkness hour lows took place between 0300 and 0400 hours every day. Over the period, 18 hours of blanketing E were reported, with a spell lasting four hours during the afternoon of the 18th.

And lastly the solar forecast. This week the active side of the sun is expected to rotate into view. Solar flux levels are expected to increase to the mid 70s. Solar activity could increase to "low" levels, with small solar flares taking place on some days. Geomagnetic activity is expected to be mostly "quiet to unsettled" throughout. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and

15MHz for the north. The darkness hour lows are expected to be about 11MHz. Sporadic E can be expected on some days, with the possibility of openings on VHF and the chance of trans-Atlantic openings taking place on 50MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Delta and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

If you don't have the paperwork to help determine the length of each of the three adjustable sections, then I have found that you can set them based upon weather markings. In other words, you will see a line demarking where the aluminum has been oxidized and where it hasn't, indicating where the sections were previously adjusted. For the center, horizontal section, you will likely find some set-screw markings to indicate where it should be set.

The tuning slide at the bottom may also show a set screw mark, though this is easily adjusted using an SWR bridge.

Hope these tricks will be useful. I currently have three Ringo Ranger II's in the air and they work well. If you break any of the three ground plane radials, I have found that 1/4" threaded stainless rod, cut to length, works just as well and is cheaper than getting new ones from Crushcraft. Another hint: when assembled and adjusted, spray the whole thing with a coat of clear kyrlon.

There has been a lot written about the numbers stations in the SWL
magazines. Some have been located, and if I recall correctly, some
have been in the continental U.S. I don't know if there is an SWL
newsgroup, but if there is they should be full of info.

>They come and go, they may transmit for an hour or so and then are gone,
>also they definitly pre-recorded or computer generated and are mostly in
>English, although I have heard some in German and Slovak languages.

Also on CW, also female voice in Spanish.

>The other anomaly is the single letter CW stations, these are the
>stations that continually send just a single letter of morse day in day
>out. The frequency never changes and nor does the letter. Any thoughts?

Some type of beacon probably. Airports use beacons for navigation
that send CW, but it's been so long since I heard the one over here
that I can't recall if it sends only one letter or more than one.
Commercial tuna boats also have bouys (sp?) they toss into a school
of fish to mark the fish that have radio beacons. I've climbed over
a bunch of them getting on/off a tuna boat but I never bothered to
ask what freq they are on.

>PL is the same as CTCSS.

I think the 'PL' decodes to Private Line and was a commercial system
name used by Motorola or GE or whomever for commercial radios.
Anyway, he meant you need a sub audible tone to key the repeater.
Keeps the rift raft away, you know (and also all the tourist who are
driving thru the neigborhood). Best reasoning I've heard for it on
a repeater is when another repeater is on the same freq close enuff
for band openings to have people talking on the wrong repeater.

While on a PBBS KA1VVS was apparently reading my messages and got
very upset and connected directly to me. I have seen this
type before. They get really angry at my views and they figure they
are going to let me have it. Some who can write but not think on their feet
post a response on a BBS but those like KA1VVS who are yellers connect
direct and find they are out matched. They just YELL insults, answer
no questions and when provided with facts and see they are losing the argument,
just leave. As a teacher of high school students I am used to being challenged.
So if you want to "get into it" with me, be prepared or I will make you
look like a fool. I can even make you look the fool even if you are right
but cannot debate.

There are a few who will make me look like a fool and that is fine.
I respect intellect. I respect courage and and ability to speak or write.
Hams have intellect but not much else, certainly little courage.

Now I bet KA1VVS will whine on about me on local repeaters where he thinks
he has a group of supporters. Please do VVS, make my day

From: mikemiller@dsm1.dsmnet.com
Message-ID: <4opqbr$p9e@dsm6.dsmnet.com>
Source record: 224181

In the June '96 issue of Computer Shopper (Page 589), there is an article about the LEO system. The primary developer is a company called Teledesic, whose principals include Bill Gates of Microsoft and Craig McCaw (late of McCaw Cellular) along with technical counsel from Huges Aerospace.

This threat is as real and dangerous as any threats to our allocated spectrum in the past - probably more so. I am afraid that the big-money will win this one - we do not have the clout to say "no". The trend is to gobble up vast radio spectrum for personal communications world-wide, thus leaving us with greatly reduced areas for rf communication and experimentation.

Unfortunately, the big-money will win here, I believe, unless nothing short of a miracle saviour appears to put a stop to hasty reasoning by people who don't have the technical expertise to know what they're doing.

Amateur radio is in big danger here. At least, let your Congresspeople know your thoughts on this. The ARRL can be of help, but they cannot do it alone. It is way too big and way too political for just the organization.

Just some thoughts....

Dont buy an MFJ tuner, period. They make some fine stuff, but their tuners are trash. I had a 3 KW tuner I bot at a hamfest....has a design defect. The inductor selector switch has chassis mounting bolts VERY close to some of the selector positions. If there is a voltage spike (and EVERY tuner will face this during tuning), the selector switch would arc to the mounting bolt and blow the switch. I bot several replacement switches before i gave up....

>
>KE4MBD
>Gerald
>

My MJF tuner (MFJ-941D) has been in service for over 10 years
with no problems. It has been used to tune numerous different types of
antennae from long-wires to full-wave loops and has done a credible
job.
I opted not get the tuner with a built-in dummy load, my
thinking being that I could use the dummy load at both my operating
position and on my workbench. A separate dummy load does make things
easier.
One note is that I annually clean the contacts, tighten the
hardware and do a general physical inspection. I just consider this
routine maintenance.

2446. ARRL info on 2m/70cm issue

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-01 00:00:00 UTC
From: disalvo@ix.netcom.com
Message-ID: <4oq0ho$jhp@dfw-ixnews2.ix.netcom.com>
Source record: 224186

The proposal to reallocate the 2m/70cm bands from the amateurs and give it to the LEO industry is apparently true, unless the ARRL is also in on the hoax. They have information on it at the following web address:

http://www.arrl.org/announce/

I guess they are looking at other bands as well. I would think that the amateur bands would be the last group of frequencies anyone would want to go after since that is where the most resistance would probably be.

What about taking some of the wasted UHF TV allocations. One little TV channel has the same bandwidth as the entire 2m band. The cellular industry and several others did it when they took chennels 70 through 83 and created the entire 800 MHz band. Television allocations have got to be the biggest waste of RF spectrum.

Hmm, since the Ham radio allocations are done on a more-or-less
international basis, can the FCC act unilaterally to reallocate these
bands? What would the Canadians and the Mexican radio authorities
say about it, for example?

Bob,
I haven't looked up the FCC regs on this in quite a while but I do remember
reading that the FCC prohibition on Amateur 10 meter amplifiers also applies
to 6 meters. As you know, the FCC prohibited 10 meter Amateur amplifiers
because so many CBers were using them to operate high power and illegal CB
transmitters. I think there may be an exclusion for 6 meter amps if they

require at least a certain driver level (like 25 or 50 watts or something) so that the use of a 5 watt CB transceiver won't get any useful amplification.

In any case, when 6 meters is open, you don't need high power anyway. I live near Seattle WA and have worked Salt Lake City, Utah on 5 watts FM using a groundplane antenna mounted on my deck. When 6 is open, you only need a few watts - that is one of the features that makes 6 meters a lot of fun and magical. I've since installed a 5 ele 6 meter beam - this improves reception too - something you won't get from a 6 meter amp.

The output of the Ten-Tec 6 meter transverter is nominally about 8 watts, depending upon some options you choose and your transmitter input level. With a beam, I think you'll find this more than adequate for 6m sporadic E openings. In 3-5 years when the sunspots return, we might even see F layer propagation again. Older 6 meter ops tell me that they used to work Japan on 2 watts during the peak of the sunspot cycle.

Ten-Tec has two 6 meter kits. One is a 14 MHz to 50 MHz SSB/CW mostly transverter (yes, you could use FM). It is not designed out of the box to operate up in the FM subands. Ten-Tec also sells a 2 meter to 6 meter transverter that is designed for FM band operation. Don't remember its power output level, though - probably around 5 watts or so.

Thanks for the comments. By our measurements the typical user operating at 21,600 to 28.8 kbps loads the main page in 20 to 30 seconds; at 14.4 kbps you'll see about 45 to 60 second loads. A 14.4 modem is our target user. However, the actual load time varies depending upon server load and Internet traffic. We rent our server space at AccessOne in Kirkland WA. They connect to the Internet over two T-1 connection (1.544 mbps each).

Depending on your browser, you may be able to disable the display of graphics or ensure that your browser caches images so that they do not need to be downloaded each time. My browser also lets me page up and down and read pages before the entire page has been loaded. This let's me select things to read without necessarily waiting for the entire page to load.

We are also in process of setting up the web site on a new ISP that may have higher performance. We'll post a message when that becomes availble - probably its a month out at least.

We know that as our hobby web site has grown, the size of the pages has also grown. We've redesigned the web site twice since starting and its time for another redesign to accomodate the increased content.

We would like to do a redesign some time but that's easier said then done. We run this web site solely as a hobby. My real job typically uses up 11 hours a day of my time; we've got 3 small kids. And other time pressures too. Sometime we will change the page design again but I would not expect more than perhaps a 1/3rd reduction in download time.

Humm... Having spent some time using a scanner to listen to the
local 2M traffic, my first thought was: Great Idea! Wonder how much
we can get for them? :-)
OK folks, all joking aside Hams are going to continue to face this
issue in the VHF and up freqs. for a while. (At least until spread
spectrum
technology matures some more. ie. costs less)
I'm an EE for a telecommunications firm, and I know how our management
would drool at the thought of getting a chunk of very valuable spectrum.
Bitching to the FCC isn't going to help much. Calling or writing your
congress persons might. Gov't bureaucrats hate being called by any
congressmans office to "explain" what the heck they think they are doing.
If the FCC persists in this plan:
I would also suggest threatning a "class action" suit to recover damages
for all the money you have invested in equipment you won't be able to use.
-Larry Ware
lrware@aol.com

PS: The thought of upset hams jamming the band doesn't bother
me much. If I bought the freq. at auction, I'd just sue the FCC until
they busted and jailed a few people. Most people with enough expertise
to "bother" my digital S.S. x-missions would have more sense.

There are other reasons to open up the transmit on amateur radios...For example, Military and governmental use. I purchase radios for military and governmental use and generally it is cheaper to purchase them off the shelf and convert them to all band use than to special order ones that are already opened up. In addition, many of the military operators purchase these radios and use them while on duty...

Some hams just don't seem to get it ... Between 1980 and 1989 in the U.S., we lost about 90 MHz of UHF spectrum allocations. In 1989, we lost 220-222 MHz. I live north of Line "A" where we have lost 420-430 MHz (which is especially used by ATV operations). Currently, only 430-440 MHz is an International Amateur allocation. That's right - the U.S. government is free to reallocate 420-430, and 440-450 (yep, right in the middle of all the repeaters) if they want to without even dealing with a ITU WRC (World Radio Conference) allocation.

FCC Chairman Reed Hundt is on a roll - sell as much spectrum as possible to help lower the national debt - this is part of how the government plans to reduce the deficit by 2002 (both Clinton Admin proposals and also Republic proposals).

The federal government has raised over $20 billion dollars through recent spectrum auction activity and now has its eyes on more auctions - some have suggested TV spectrum could fetch as much as $70 Billion.

Personally, I regard many of these numbers as hocus pocus. In the recent $10.2 Billion PCS "group C" auction, about 15% of the auctionees have bailed out already and the government will reauction the spectrum. Further, the US government has not earned $10 billion at all - instead, the auctionees must pay 10% this year (about $1 B). In years 1 through 6, they then pay interest only loans and years 7-10, they pay interest+principle in straightline amortization. Your tax money is financing 90% of the purchase price with no principle payments until year 7 (about 2002!). Its identical to buying T-Bills/savings bonds! No telling how many more of these purchasers will go belly up between now and then. We may never see a sizeable chunk of those auction revenues. But politicians can get one heck of a lot political mileage out of this before anyone finds out the real story!

All politicians have huge dollar signs floating before their eyes right now. Never mind that basic economics tells us that prices are based on supply of demand. Purchasers of spectrum today base their payments on what they believe "scarce" spectrum is worth. If suddenly all of it goes up for auction, the spectrum is no longer nearly so scarce and the prices may very well fall. Further, so far the government only has eperience auctioning spectrum for high value opportunities - paging, cellular mobile service, SMR, wireless local loop and perhaps upcoming TV. It is unclear that other applications would apply such a high valuation on spectrum because there is no money to be made.

The government has new proposals before it right now to find more spectrum to auction below 5 GHz. Essentially all Amateur bands at 420 and up are shared with the federal government. Any of these bands may potentially be placed on the auction block. Don't believe it? Just last year the NTIA (who makes recommendations on which bands the government should give up), recommended reallocation of 2300-2310, 2402-1417 MHz - both of which are shared with the Amateur service. Amateur arguments to retain these bands were only part of what "saved" them from the auction block - the most effective argument is that in the 2400-2450 MHz band, the band is already being used the public for unlicensed devices, Amateur use, etc. This was - effectively - not a conversion of government bands to public use - they were already publically used bands!

Sen. Larry Pressler (Dem., S.D.) is seriously proposing that ALL radio spectrum be put up for auction! The Progress and Freedom Institute (affiliated with House Speaker Gingrich) last year released a major report recommending auctioning off all spectrum - it received serious attention by government officials. Where Amateur radio fits into this model is unclear. These are extremely serious issues that all Amateurs should be following. You can follow these issues yourself by visiting various web sites operated by the NTIA, the FCC, the U.S. Senate, and others.

These issues are very, very real. You can read more about the preparations for WRC97 at http://www.fcc.gov/ib/wrc97/

2455. Seeking Info 144 MHz transceivers and repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-01 00:00:00 UTC
From: ptay@interlog.com
Message-ID: <4oq9tk$b4c@news.interlog.com>
Source record: 224195

I recently returned from a trip to Guyana. People living in the savannahs there generally have no access to communications. Some people there are interested in getting used 144 MHz public service transceivers and setting up a repeater(s) on a mountain. Can anyone help me find equipment sources and info on this subject? The country is very poor, so cellular links and new ham equipment are not an option. Also, I would appreciate finding appropriate sources for technical info and educational material, as the 'information vacuum' in Guyana is almost as great as the lack of capital. Thanks in advance for any help you can give.

2461. Wrc99 Timetable

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <833756622.AA06516@hamlink.mn.org>
Source record: 223952

Over the past week or so, I have seen a number of comments by
concerned amateurs which suggest that there is an incomplete
understanding of preparations being made by IARU and by ARRL
for the 1999 WRC regarding the issue of Morse testing for HF
amateur licensees, and other matters to be considered at
WRC99.
-
First, it is very important to note three things.
-
1 -- Neither of these organizations has reached any decision
on what their respective position will be going into WRC99.
Each of these organizations (and I assume other organizations
such as RAC, RSGB, DARC, JARL, WIA, NZART, etc.) have formed
committees to gather input and produce recommendations.
-
2 -- These two organizations are not bound to reach the same
decision.
-
3 -- Both organizations solicit reasoned and thoughtful input
in which you state your ideas in a persuasive and rational
manner.
-
Here is a quick description of the status of the timetables
for these two committees.
-
IARU FASC Committee: This committee has issued a Discussion
Paper which has been widely circulated. It is NOT a position
paper, but rather a paper designed to foster discussion by
the various societies of each of its member nations. This
committee continues to gather input and will issue a report,
probably in July. This report will be discussed (and perhaps
modified) at IARU regional meetings in Tel Aviv (9/96), Beijing
(9/97), and Venezuela (Fall/98). Only after all this
discussion, probably in January of 1999, will the IARU
Administrative Council release a final position.
-
ARRL WRC-99 Committee: This committee, chaired by Director
Tod Olson held its initial meeting in April, primarily to plan
an effective way to gather input from US licensees. In
August, QST will carry a mail-in survey to gather input from
all ARRL members. Also, ARRL will fund a separate professional
survey to gather input. In September the committee will meet
to review the information received from these two surveys, and
any other comments received from concerned persons. In November

the committee will write a draft report and recommendations. In December they will provide the Board with a final report and recommendations. In January the Board will have their first opportunity to formally consider the report. There are four possible results of that consideration. 1) They can adopt the report as the ARRL official position. 2) They can reject the report. 3) They can adopt parts and reject parts of the report. 4) They can decide to keep the issue open for further study and take no action until some later date.

-

As you can see from the above, both IARU and ARRL are FAR from having decided on a position relative to HF Morse (and other matters) for consideration at WRC99. Again, your inputs ARE solicited by both committees.

-

Of course there are those of us who would resort to other acts -
perhaps dynamyting communications towers and dishes of offending
LEO sat ops? Or maybe even selective targeting of politicians.

I for one believe that it's time we find new weapons against big
business just walking in and taking over.

2465. Has the sale of new 2m and 440 equipment dropped lately?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDsE9xt.n1L@netcom.com>
Source record: 223956

I imagine the sales of new 2m and 440 equipment may have dropped some, people holding off buying stuff until this LEO thing is over. The manufacturers and distributers should notice, and contribute comments to the "guilty" parties (FCC, state dept, the LEO company).

Someone mentioned "eminent(sp) domain" where peoples homes got knocked down to make way for highways and such. But those people were PAID for their houses and costs (presumidly fair market value). So, if our bands are taken, I'd want and expect compensation for the value of 2m and 440 equipment rendered useless.

With 220 MHz a few years back, they still left us with 222 to 225 MHz. so our 220 rigs were still usable. No presesident(sp) there.

2466. Did UPS ever actually use 220 - 222 MHz?

I purchased the '3 KW' Differential T-Tuner. Took me
about two days before the roller inductor melted into
a pile of goo.

But MFJ's service is as good as thier product - after a long
international telephone call I convinced them to send me a
new roller inductor instead of sending back the tuner and they
did - in a nice white box with 'REJECT' written in red on the
outside of the box. The 'new' roller was so warped it wouldn't
roll.

In my opinion, they live up to thier name - Mighty Fine Junk.

I'm just outside Louisville so maybe I can help out some. Write to
ae4pt@iglou.com and ask him about exam schedules. He's the head of
the VE team that I'm a part of. He should be able to get you info on
all the exams in the area.

As to what to study for, that depends on what you want to do. You can
go ahead and get the no code tech and work up from there. Gives you
vhf and above. Would only have to work on the theory for now and not
worry about the code yet. Or the tech theory and 5wpm code gets you
some hf privileges as well. The higher you go the more you can do.

Let me know if anything I can help with.

Are you sure that the bridge was calibrated, You can check the bridge with a known
resistive source
before each use, also the readout for the reactive componet can be frequency dependant.
Also make sure the
analyzer is seeing the same value as your rig as, unless you have a 1 to 1 swr the value
you measure
will change as you measure the impedance at other places in the line

I have to agree with this. The description of the kit should
mention the need to add external filtering. What they're selling
is a kit to build a comb generator, not a transmitter.

Also, price is irrelevant unless one assumes that cheap pricing
entitles a manufacturer to use deceptive practices to sell their
product.

My you are prejudiced aren't you. Almost all of the serious ones understand very well. There is not a lot of commercial gear on the upper bands (2304, 3456, etc)

>And how many V/UHF-only techs who only own an HT to talk on the local
>repeater would know what DX means?
I would suggest that a higher percentage know what DX means than know what boat anchor means

>Again (and again!), a particular group is not meant to target *every*
>ham worldwide.
No, but the name should be clear to most hams. The current evidence is that while this is true for American hams, it is not true for most foreign hams. Even more the on the bands, Usenet is international

*****ARRL NEW ENGLAND DIVISION SPECIAL BULLETIN 96-9A*****

QST to all Amateurs

May, 1996

Strafford, VT

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ (THE
CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could lose these bands if
we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to
be done! Your help is needed to defend two meters and 70 cm. Yes,
that's right -- the two most popular and crowded amateur VHF/UHF bands!
But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World
Radiocommunication Conference, WRC-97. In the past, the public has been
able to participate in the preparations for such conferences by
responding to FCC Notices of Inquiry. In March, the FCC announced a
streamlining of its International Bureau's preparatory processes for WRCs.
Under the new scheme, the NOIs have been eliminated in favor of increased
emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the
Advisory Committee has been created to address specific agenda items.
The output of each IWG will go directly to a joint FCC-NTIA-Department of
State Steering Committee of the Advisory Committee. There, draft
proposals as received from the IWGs will be reviewed and forwarded to the
FCC for possible release as preliminary U.S. proposals for public
comment.
In announcing the streamlined WRC preparatory process, the FCC tried
to reassure those who might be concerned about reduced opportunities for
public participation: "Interested parties should note that input to the
Advisory Committee may be sent at any time directly to the Chair of the
WRC-97 Advisory Committee; the Chairs of the Advisory Committee's
Informal Working Groups; Cecily C. Holiday, the FCC's federal officer
of the WRC-97 Advisory Committee,on C. Ladson, the alternate
federal officer."
Hold that thought while we shift gears to the substance of the
issue.
One of the WRC-97 agenda items includes consideration of possible
additional frequency allocations for the mobile- satellite service.
So-called "little LEOs," low-earth orbit satellites below 1 GHz, already
have allocations. Their proponents claim these are inadequate and are
trying for more. The needs of little LEOs are being addressed in IWG-
2A, chaired by Warren Richards of the Department of State. The ARRL
technical relations staff participates in IWG-2A to represent Amateur
Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a
list of "candidate bands" for little LEOs. The list includes a number of
bands that would negatively impact existing services, and does not
include others that would be technically
more feasible but to which strong objection from incumbents could be
expected -- the point being
that some political, rather than purely technical, judgment already has
influenced the list.
Incredibly, 144-148 and 420-450 MHz were included on the list! This
is the first time in memory that another service has been proposed for

the two-meter amateur band. We must make sure it is also the last time. We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.

Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.

Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97

It is a real proposal to an Informal Working Group(IWG-2A), for the
upcoming WRC-97. I doubt that it will make it beyond that
point - this time.

It only requires slightly different firmware. In most equipment,
this is programmed into the ROM that resides in the microprocessor
chip itself. Changing that chip is not a simple task, so this is
the perfrect means to protect the product from misuse.

>This is a good argument on paper but, followed to an extreme, my

That's life. She also can't legally buy you a drivers license or
register a gun in your name. The joy of receiving a surprise
2M rig is insignificant compared to the problems these sales create
in the wrong hands. What good will it do you to own that rig if
the bands are full of bootleggers?

>position is sensed by the ABS?

I don't know much about ABS, but I do seem to remember something
about fuel injection that has to do with the way some systems
meter intake airflow. If I'm not mistaken, they use a heated
wire at the input to the metering unit, and airflow is determined
by measuring the current change through the wire. As more air
flows, the wire becomes cooler and more current flows. This is
computed in conjunction with ambient air temperature and other
factors in order to arrive at instantaneous calculations of
airflow. Also, if I'm correct about the system, this particular
function is cut off during idle, at which time radiation from the
metering unit decreases. It's possible this might also be linked
to the clutch, as airflow metering is not so critical at no load,
even when the airflow valve is opened to accelerate the engine.

Perhaps someone more knowledgable with current designs will know
whether this system is still in use, and whether I'm correct
about the way it works.

The following really is the view of the typical ham wife.
The reason they are that way has to do with the way the ham is.

The following is a reprint from The Madison Institute Newsletter,
Fall Issue, 1894:
====
INSTRUCTION AND ADVICE FOR THE YOUNG BRIDE
On the Conduct and Procedure of the
Intimate and Personal Relationships
of the Marriage State for the
Greater Spiritual Sanctity of this
Blessed Sacrament and the Glory of God
by
Ruth Smythers beloved wife of
The Reverend L.D. Smythers
Pastor of the Arcadian Methodist
Church of the Eastern Regional Conference
Published in the year of our Lord 1894
Spiritual Guidance Press
New York City

To the sensitive young woman who has had the benefits of proper upbringing, the wedding day is, ironically, both the happiest and most terrifying day of her life. On the positive side, there is the wedding itself, in which the bride is the central attraction in a beautiful and inspiring ceremony, symbolizing her triumph in securing a male to provide for all her needs for the rest of her life. On the negative side, there is the wedding night, during which the bride must pay the piper, so to speak, by facing for the first time the terrible experience of sex.

At this point, dear reader, let me concede one shocking truth. Some young women actually anticipate the wedding night ordeal with curiosity and pleasure! Beware such an attitude! A selfish and sensual husband can easily take advantage of such a bride. One cardinal rule of marriage should never be forgotten: GIVE LITTLE, GIVE SELDOM, AND ABOVE ALL, GIVE GRUDGINGLY. Otherwise what could have been a proper marriage could become an orgy of sexual lust.

On the other hand, the bride's terror need not be extreme. While sex it at best revolting and at worse rather painful, it has to be endured, and has been by women since the beginning of time, and is compensated for by the monogamous home and by the children produced through it.

It is useless, in most cases, for the bride to prevail upon the groom to forego the sexual initiation. While the ideal husband would be one who would approach his bride only at her request and only for the purpose of begetting offspring, such nobility and unselfishness cannot be expected from the average man.

Most men, if not denied, would demand sex almost every day. The wise bride will permit a maximum of two brief sexual experiences weekly during the first months of marriage. As time goes by she should make every effort to reduce this frequency. Feigned illness, sleepiness, and headaches are among the wife's best friends in this matter. Arguments, nagging, scolding, and bickering also prove very effective, if used in the late evening about an hour before the husband would normally commence his seduction.

Clever wives are ever on the alert for new and better methods of denying and discouraging the amorous overtures of the husband. A good wife should expect to have reduced sexual contacts to once a week by the end of the first year of marriage and to once a month by the end of the fifth year of marriage.

By their tenth anniversary many wives have managed to complete their child bearing and have achieved the ultimate goal of terminating all sexual contacts with the husband. By this time she can depend upon his love for the children and social pressures to hold the husband in the home.

Just as she should be ever alert to keep the quantity of sex as low as possible, the wise bride will pay equal attention to limiting the kind and degree of sexual contacts. Most men are by nature rather perverted, and if given half a chance, would engage in quite a variety of the most revolting practices. These practices include among others performing the normal act in abnormal positions; mouthing the female body; and offering their own vile bodies to be mouthed in turn.

Nudity, talking about sex, reading stories about sex, viewing photographs and drawings depicting or suggesting sex are the obnoxious habits the male is likely to acquire if permitted. A wise bride will make it the goal never to allow her husband to see her unclothed body, and never allow him to display his unclothed body to her. Sex, when it cannot be prevented, should be practiced only in total darkness. Many women have found it useful to have thick cotton nightgowns for themselves and pajamas for their husbands. These should be donned in separate rooms. They need not be removed during the sex act. Thus, a minimum of flesh is exposed.

Once the bride has donned her gown and turned off all the lights, she should lie quietly upon the bed and await her groom. When he comes groping into the room she should make no sound to guide him in her direction, lest he take this as a sign of encouragement. She should let him grope in the dark. There is always the hope that he will stumble and incur some slight injury which she can use as an excuse to deny him sexual access.

When he finds her, the wife should lie as still as possible. Bodily motion on her part could be interpreted as sexual excitement by the optimistic husband.

If he attempts to kiss her on the lips she should turn her head slightly so that the kiss falls harmlessly on her cheek instead. If he attempts to kiss her hand, she should make a fist. If he lifts her gown and attempts to kiss her anyplace else she should quickly pull the gown back in place, spring from the bed, and announce that nature calls her to the toilet. This will generally dampen his desire to kiss in the forbidden territory.

If the husband attempts to seduce her with lascivious talk, the wise wife will suddenly remember some trivial non-sexual question to ask him. Once he answers she should keep the conversation going, no matter how frivolous it may seem at the time.

Eventually, the husband will learn that if he insists on having sexual contact, he must get on with it without amorous embellishment. The wise wife will allow him to pull the gown up no farther than the waist, and only permit him to open the front of his pajamas to thus make connection.

She will be absolutely silent or babble about her housework while his huffing and puffing away. Above all, she will lie perfectly still and never under any circumstances grunt or groan while the act is in progress. As soon as the husband has completed the act, the wise wife will start nagging him about various minor tasks she wishes him to perform on the morrow. Many men obtain a major portion of their sexual satisfaction from the peaceful exhaustion immediately after the act is over. Thus the wife must insure that there is no peace in this period for him to enjoy. Otherwise, he might be encouraged to soon try for more.

One heartening factor for which the wife can be grateful is the fact that the husband's home, school, church, and social environment have been working together all through his life to instill in him a deep sense of guilt in regards to his sexual feelings, so that he comes to the marriage couch apologetically and filled with shame, already half cowed and subdued. The wise wife seizes upon this advantage and relentlessly pursues her goal first to limit, later to annihilate completely her husband's desire for sexual expression.

2487. ***** ANNOUNCE: G4SGI Website update *****

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC

Hello all,

Thank you to all those who have visited my website since it opened
in January this year. There have been over 2400 visits!

http://www.ibmpcug.co.uk/~g4sgi/

The site has these exciting radio related features:

SWL working aids: Foreign Language Recognition, Modulation,
Propagation and International Bandplan. These working aids are
available on-line or for download in Windows help file format.
Invaluable for the beginner and experienced alike.

List of UK MW and VHF stations: This text file contains a complete
list of broadcast stations in the British Isles.

PC-MONITOR v4.03 free for download: This DOS program controls the
FRG8800 and FRG9600 radios. Available completely free.

FRG100 Sprite demo: Information on this Windows control program
for the FRG100 together with a free demo version.

MUFsight demo: Information on this HF Propagation predicition
Windows program which uses the MINIMUF algorithm to plot
propagation information on a world map. Download a demo free.

Information on AOR control software: Includes information and demos
of Searchlight (for the AR3000A), Concerto (for the AR3030),
PC-MANAGER (for the AR8000/AR2700), Hawk (for the SDU5000).

NEW! Information on new AOR software for the AR3030/AR7030:
Combines a Visual dBase application with new high performance
control software. Plot transmitter data on a world map and tune
using a point and click interface. Available soon.

Links to other radio related sites: Including broadcast stations,
major radio retailers/dealers/manufactuers, organisations, other
personal pages.

There is something there for everyone. Why not visit.

Simon

In <4ol4rr$ei0@anchor.cis.att.com> res@cmprime.cis.att.com (Richard E Stealey) writes:

>Congratulations on the formation of your new newsgroup!

>wishing you all the best of dx

>73
>Rick KT2Q

Hmmm, it seems it's not so straightforward. I went to the control group trying to find the newgroup message (so that I could point it out to the local news admins to get the group created, if they haven't already done so). The message I found instead was the following:

>Path: s-cwis.unomaha.edu!sol.ctr.columbia.edu!spool.mu.edu!munnari.OZ.AU!news.ecn.uoknor.edu!solace!nntp.uio.no!news.cais.net!news.jsums.edu!gatech!newsfeed.internetmci.com!in2.uu.net!bounce-back
>From: tale@uunet.uu.net (David C Lawrence)
>Newsgroups: rec.radio.amateur.dx
>Subject: cmsg rmgroup rec.radio.amateur.dx
>Control: rmgroup rec.radio.amateur.dx
>Approved: newgroups-request@uunet.uu.net
>Message-ID: <828973922.7326@uunet.uu.net>
>Date: Mon, 8 Apr 1996 14:32:02 GMT
>Lines: 5

The recent newgroup for this group in my name was a forgery.

rec.radio.amateur.dx is widely considered a bogus newsgroup given that it has not been approved by accepted USENET group creation procedures. Please remove the group from your active file.

--end of message

Now this too, of course could be a forgery, but it does raise some questions about whether the newsgroup really exists (I don't recall seeing an announcement in news.announce.newgroups, for example). I'm certainly not accusing any of the sincere proponents (including Rick) of any forgery, but I have to wonder who is playing games and for what purpose.

Hello !
I'm newborn into Yours radioworld.
I've a very big problem, with the all over tele and communicating people.
Well my problem is as follow.
When I am working under my MGA-57, and the telephone is ringing, my black fingers is not allowed to touch our white telephone.
What I need is an earphone in my ear and some rather smart equipment connected to my telephone (radio thing of course).
Is there anybody out there, can solve my problem.

Regards
Tor Loftesnes

>any forgery, but I have to wonder who is playing games and for what
>purpose.
>
Yes rec.radio.amateur.dx is now an official group. I am enclosing the
entire set of control messages for this group. Note the last one!
On April 1 (does the name April Fools Day ring a bell?) someone forged
newgroup messages (giving the name David Lawrence) for a large number of
groups, many of which were being discussed in news.groups. And on
May 4 and May 5, ellisd@netcom.com sent out newgroup messages for the
group. In reaction to these David Lawrence sent out more than 10
rmgroup messages between April 1 and May 13. However on May 30 he sent
out the official newgroup message for the group after it had officially
passed.

For your newsgroups file:
rec.radio.amateur.dx DX Amateur Radio

Anyone can create a newsgroup in the alt, biz, comp, earth, humanities,
misc, news, rec, sci, soc, talk, us, or any other Usenet hierarchy.
New newsgroup proposals may optionally be discussed in news.groups.

Dead SA, if you're reading this then your Usenet software may be misconfigured.
Please consider changing your /usr/lib/news/control.ctl file as follows:

NEWGROUP MESSAGES
honor them all and log in ${LOG}/newgroup.log
newgroup:*:*:doit=newgroup

RMGROUP MESSAGES
drop them all and don't log
rmgroup:*:*:drop

and no other rules for newgroup or rmgroup). This way you'll save a lot of time
and eliminate these annoying little e-mails. Thank you and have a nice day!!!

rec.radio.amateur.dx is an unmoderated newsgroup which passed its vote for
creation by 212:26 as reported in news.announce.newgroups on 25 May 1996.

For your newsgroups file:
rec.radio.amateur.dx Discussion, tips, notices and news for DXers.

The charter, culled from the vote result announcement:

The purpose of the "rec.radio.amateur.dx" newsgroup is to provide an
unmoderated forum for the discussion of topics of general interest
to DXers, including but not limited to:

o announcements of and invitations to join upcoming DXpeditions;

o information about QSL routes;

o tips and techniques regarding good operating practices;

o solicitations for schedules that will enable new DXers to get the last few "new ones" needed to qualify for DXCC;

o periodic postings of data files, such as the DXCC countries list, great circle coordinates used to determine beam headings, etc.;

o administrative policies and practices pertinent to DX operations, such as gaining recognition for a DXpedition by national societies, adding new countries to the DXCC countries list, etc.;

o the general joys and sorrows of participation in or making contact with a DXpedition.

Although the term "DX" is usually used in reference to global communications on the HF bands, operators who use other modes have different applications of this term. This is especially true of VHF and UHF operators, for whom a contact of only 1000 or even 100 miles might well be considered DX depending on the band in which the contact is made. There is currently no newsgroup dedicated to these operators. Although the majority of the traffic on "rec.radio.amateur.dx" is expected to concern HF DXing, proponents of the higher bands are welcome to use "rec.radio.amateur.dx" as a forum in which to discuss their DX activities and, in fact, are encouraged to do so.

Postings that would be considered inappropriate for this newsgroup are those whose topic falls more naturally under the charter of some other newsgroup in the "rec.radio.amateur" hierarchy. For example, discussion of radios used by DXers would be more appropriately posted to the "rec.radio.amateur.equipment" newsgroup. Similarly, general discussion of beam antennas typically used by DXers would be more appropriately posted to the "rec.radio.amateur.antenna" newsgroup.

June 3, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA2FIJ, WD4PDZ, AA5DX, DF4RD, DK9IP, DL7VOA, DL9GOA & DX News Letter, EI6FR, EY8MM, G3RTE, G4BUE & DX News Sheet, HL1SSG, I1JQJ & 425 DX NEWS, OZ8RO, VE1RU and VE6SRC for the following DX information.

4S, SRI LANKA. Over the past weekend, stateside stations (along with Europeans and Asians) report 4S7EA was quite active on 15, 20 and 80 meters SSB. Check 15 meters on 21250 kHz around 1130z; 20 meters on 14190 khz around 1515z and 0140z and 80 meters on 3799 kHz around 1920z. QSL via Ernest Amarasinghe, 275 6 Colombo Rd, Divulpitija, Boralesgamuwa, Sri Lanka.

9H, MALTA. Be looking for Heinz, DL6MDG, to be active from Valetta, June 7-20th. He will be signing 9H3SS and will be active mainly on SSB. QSL via CBA.

9N, NEPAL. The DX New Letter (DXNL) reports Brad, KV5V, will stay in Nepal and will try to become active from the stations of 9N1ARB (Dick) and 9N1RHM (Rich) from June 23-30th. Meanwhile, Dick can usually be found on 20 meter (around 14200 kHz +/- 20 khz) between 0100 and 0230z. QSL via KV5V. Rich, who seems to be not as active, can be found around about the same time and frequencies. Remember, YL Kyoko, 9N1KY, is on the air from Nepal until July. There have been no QSNs reported (on the Ohio/Penn Network) of her activity as of yet.

9U, BURUNDI. Well known DXer, Peter, ON6TT (currently signing 5X1T), was heard active from here this past week operating from Alfredo, 9U5CW, QTH. Using Alfredo's callsign and station, Peter was very active on CW on the lower bands. Check 80 and 160 meters between 2230 and 0300z. He was also heard operating on 17 meters and 20 meters CW/SSB/RTTY. His length of stay is unknown at this time.

EJ, GREAT BLASKET ISLAND (IRELAND). Declan, EI6FR, reports that the WestNet DX Group will activate IOTA EU-007 next weekend. Opertions will begin Friday, June 7th and last until Monday, June 10th inclusive. This will be an all bands (10-160 meters) operation with particular attention to the low bands. The callsign used will be EJ7NET and QSLs should go as usual to EI6FR. ADDED NOTE: Declan states this same group will be active in July for the IOTA contest were they will operate from Anglesey EU-124 using the callsign GW4VEQ/P (or a special contest callsign).

EY9, TAJIKISTAN (RARE PREFIX!). Nodir, EY8MM, reports he will be planning to be active as EY8MM/9 Sunday, June 6th (ed. I think he means June 9th, but just in case watch for him on the 6th) on 18 MHz. Nodir is looking for a good contest (160 m) position and will drive over mountains and install temporary 2-el quad for a 1 day test. He hopes it will be interesting for PX hunters to catch a EY9 since they are not active and are considered a rare prefix. All QSL via bureau or CBA.

FO, CLIPPERTON ISLANDS (DXPEDITION UPDATE). Jay, WA2FIJ, continues to seek a boat (or two) whose owner(s) would like to go to Clipperton or who may be passing the island and would be willing to stop for 7-10 days and then drop the team off in Mexico (or Costa Rica) in the February/March 1997 time frame. For this DXpedition, there is a planned FIRST YL operator and the first use of a Quad/tower combo on the island (if the vessel can handle the tower). Jay is quite confident he can get the necessary paperwork for an operation, but he needs a boat (or boats) committed so the paperwork can be inititated. Jay reports the Clipperton operation requires 3 levels of documents:
1. Permission for the specific boat to be in French waters.
2. Permission to be on the island.
3. The actual amateur license.
In order to file the paperwork he needs the name of the boat(s) to generate the proper permits. Thus the search for a vessel.

FR/T, TROMELIN. According to the 425 DX NEWS FR5ZQ should be active in July as /T for some weeks. The CW/SSB activity is planned.

GJ, JERSEY (An IOTA DXpedition). IOTA chasers should mark their calendars for this one. Jim, G3RTE, and Phil, G3SWH, will be active from "Les Minquires" - The Minkies, EU-099 from Friday 28th June until Monday 1st July 1996. Callsigns to be used will be GJ3RTE/P on SSB and GJ3SWH/P on CW. Operations will be on all bands from 80-10 meters depending upon conditions. It is planned to have two stations running. All QSLing will be handled by G3SWH (direct to CBA or via the bureau). This trip is dependant upon the weather.

HL0, BOGIL ISLAND (South Korea). Hanyang University Amateur Radio Club (HL0C) plans to operate at Bogil Island, Chunnam Provice, Korea. The island is in IOTA AS-085 group. The date of operation will be June 24-26. HL0C/4 will be the callsign used. Send QSL card to HL0C direct or via the bureau. Please add "Amateur Radio Club, HL0C" to the CBA if you send your QSL card direct.

QSL UPDATES.... Ken, VE1RU, reports that 75% of the CY0TP QSLs for the USA have mail. Mailings go out every Monday morning. Requests for QSLs via the bureau have been arriving over the last month with the first mailing of bureau cards taking place last week. QSL requests for 6 meters and satellite contacts have been mailed with none outstanding. If you have already sent for a QSL and it hasn't shown up in your mailbox as of yet, Wayne, VE1CBK, requests that you don't send again, at least until all the remaining QSLs have been answered and the questionable cards have been checked. Remember, all contacts for 6 meters and up which includes all satellites contacts go via VE1AOE (CBA). All contacts with CY0AOE, also go via VE1AOE. All HF contacts RTTY, CW and SSB go via VE1CBK, Wayne King, 63 Brook St., Lake Fletcher, Nova Scotia, CANADA, B2T 1A5.......
If you need QSLs for 9K2ZZ, 9K2ZC or 9K2YY, you better send for them soon. Ray, W8CNL, and Derek, KC3ELO, report that they will be removing the logs off their computers. Once the logs are off the computer, they will only reply QSLs about once every 6 months.........
9H0DX AND 9H3WK QSLs are printed (reports Win, DK9IP) and will be mailed to the DARC-HQ next week for further distribution to the bureaus. Cards received direct were mailed already......
Ray, OZ8RO, reports all direct QSLs for his JW5HE activities in April and May have been sent out now......
Dave, WD4PDZ, reports he is NOT the QSL Manager for KP4XX. He has been receiving cards for this station (mostly from Europe) and he has no knowledge of this station. He is the QSL Manager for YS1XS.

RARE GRID SQUARE FOR VHF CONTEST. Look for I8TWK/8 operating from grid square JM79, from the June 6-10th. Frequencies to be used are: 50.152 MHz (SSB and CW) and 144.100 (Random MS); also 144.300 *-QRM SSB Tropo calls.

SPECIAL EVENT STATION. Armed Forces Day will be held at Canadian Forces Base Calgary next Sunday, June 9th from 1600z to 2200z. Special Event Station CF6AFD will be on the air from Hanger 1, Currie Barracks, CFB Calgary. Activity planned will be on HF, local VHF (FM & SSB), packet radio and possibly 6 meters. QSL to VE6SRC.

UK SPECIAL CONTEST CALLSIGNS. The DX News Sheets (DXNS) report British club stations will be using special "1x1" and "2x1" callsigns in certain international HF contest. The callsign will consist of a "G" or "M", a regional locator (except England), a digit corresponding to the year (ie. 6 for 1996) and a single letter (example: G6A, M6B, GW6Y, MM6Z... etc). Fifty-two callsigns are available each year (G#A-Z and M#A-Z). The first contest in which these special callsigns will appear will be the IARU Championship (July 13-14th).

VQ9, CHAGOS ISLANDS. Ron, VQ9DX (AA6DX), will be leaving Diego Garcia on June 11th after 4 months of activity. QSLs will be printed upon his return and mailed promptly. QSL via home call AA5DX, Ron Marra, Marginal 301-C, La Rambla, Suite 205, Ponce, PR. 00731

-=-=-=

accessed and sent to a person requesting ALL the back issues (and special bulletins) of the Ohio/Penn DX Bulletin. Bulletins can be obtained by just sending E-mail to "opdx-request@nshore.org" along with the word "archive" in the "Subject:" line and then use the following commands:

archive help ...
get filename ...
ls directory ...
egrep case_insensitive_regular_expression filename ...

Aliases for 'get': send, sendme, getme, gimme, retrieve, mail
Aliases for 'ls': dir, directory, list, show
Aliases for 'egrep': search, grep, fgrep, find

OPDX Bulletins/files are listed in directories by years, as in volume91, volume92 ... volume95, volume96. Regular weekly OPDX Bulletins have a ".0" appended to the OPDX Bulletin number ... special bulletins, corrections/etc. have a dot 1-9 digit appended to the OPDX Bulletin number (001.0 to 255.0 are regular weekly issues, 186.1 or 197.3 which are special bulletins of those particular weeks). The following "volumes" contain the following bulletins: volume91 (001.0 to 042.0), volume92 (043.0 to 092.0), volume93 (093.0 to 140.0), volume94 (141.0 to 187.1), volume95 (188.0 to 235.0) and volume96 (236.0 to 256.0).

Examples:
ls latest <-- Will list a page of the latest bulletins
egrep some.word latest/* <-- This command will search for the latest word, callsign, country...etc. Neat feature!
get latest/LIST <-- Will send the current list of bulletin.
get volume[yy]/LIST <-- Will send the list of files listed for a particular year [yy].
get volume[yy]/###.# <- Will retrieve a bulletin (###.#) from a particular year [yy].

I guess, there will be lots of reasons.... Wasn't it the ham radio
community, who by voluntary action kind of invented what those LEO guys
now want to explore commercially? How about AMSAT claiming some patents
for the feasability of LEO communication on all VHF ham bands? I guess,
the claim can easily be proven by literature as well as by testimonies of
I have no idea how many hundred thousand witnesses....

I would think that the LEO group would rather have frequencies which had either few or no transmitters currently available. To try for a frequency range where the number of transmitters in use is astronomical and the resultant probablility for interference is as large doesn't seem practical. Unless they plan on recalling all 2M and 440MHz gear :)

2503. Hellllp - switching power supply assistance asked

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC
From: morris@grian.cps.altadena.ca.us
Message-ID: <morris.283.00717506@grian.cps.altadena.ca.us>
Source record: 224034
Cross-posted to: sci.electronics.misc,rec.radio.amateur.misc

My zero knowledge of switching power supplies is hampering me on two projects.

Here's the situations...

Project #1:

I picked up a second hand solar panel array that it is made up of four 12v 2a panels, currently wired as 24v at 4a (actually anywhere from 18-34v, depending on the light level). It could be rewired very easily as 12v at8a (potentially 9-17v). I'd like to come up with a switching regulator design that will take the 18-34v in, and output about 13-14v at whatever amps can be made available. Or if rewiring it for 12v is more appropriate, no problem.

The time frame is close - the annual amateur radio emergency prepardness exercise is coming up fast (June 22nd & 23rd), and I'd like to use this solar system then. I just need to come up with a decent design and any wierd chip(s) - I have a good sized junk box.

My fallback position is to use a linear regulator based on a 7812 and some pass transistors but we'd like to have something that makes use of the excess voltage/power, not just throws it away as heat.

Project 2:

I work with a local repeater group, and we've come up with some commercial audio processing equipment that needs +28v at 60 watts (i.e. a little over 2a). Everything at our repeater site runs off of +12v. So while I could come up with a 555 driving some power transistors and a toroidal transformer, and standard linear supply after that, I thought that a switcher could give me a much higher efficiency.

Comments? Ideas? Please?

>
>73, Jim KH2D

Jim, You should call them again and get a new roller. The old ones were made by Oren Elliot Products in Edgerton Ohio. They were a big problem, since the people at OEP don't have a clue about correct RF component design. The OEP people are machinists by trade, not EE's.

To avoid that problem, you need to use the MAXIMUM capacitance that permits a match in your system. Some MFJ manual's are VERY poorly written when describing how to tune the tuner.

You may try the new roller coil, since the Q is much higher than the old coils. That, in combination with the correct tuning procedure, will greatly improve things.

BTW, the worse possible loads for any T network are capacitive and low resistance. Avoid them like the plague.

: the group proponent for several newsgroups). One of the things I know that
: you obviously don't is that I need support, which I wouldn't get by
: insulting the people who could help me. Like the Hams involved in
: newsgroup creation.
: Ralph

There is nothing stopping you from proposinging your antique radio group,
a little research and you will find a similar active group in existence.
The rest of us would like to see a boatanchors group preferably under
rec.radio.amateur.

You are insulting a -lot- of us hams and readers, when you point out our
boatanchors are antiques. It doesn't really have to "glow in the dark" to
be a boatanchor. We are all waiting for the new group process to begin,
while you stand outside casting stones.

How do you think homebrew and the resent dx group were created? They are
natural subdivisions of rec.radio.amateur. rec.homebrew is an other
topic altogether ... but then you knew that.

In other words, you don't believe that the whole idea of amateur communications is to promote electronics and communications? In other words, there is also a "good ole boys" factor? Or perhaps you mean that the whole idea of "promoting amateur communications" also includes a competence test, like driver's licenses? Well, sir, neither driver's driver's licenses nor any sort of code test has ever promoted competence. If you were looking for competence, perhaps the test should include a small set of parts for which the potential operator is expected to assemble a working crystal set and decode the sequence of CW codes emanating from a reasonably strong receiver placed in the room. But merely being able to transcribe and/or key CW is purely a measurement of one's discipline, memorization ability, and motivation.

I, too would be in favour of a newsgroup, although you might want to
consider whether the new sub hierarcy should be repeater or, say,
vhf+uhf. Then you could have rec.radio.amateur.vhf+uhf.repeater,
or r.r.a.vhf.repeater, or even r.r.a.vhf

Either way, you will have my support, even if it only gets the repeater
coordination wars out of the other newsgroups....:-) :-)

That is all very well and good if there is a FAQ to read. I just
checked the news.answers spool at Netcom, which honors the Expires:
headers placed in FAQs, and there is nothing I can find with "amateur"
in its name.

As FAQ editor for rec.antiques.radio+phono, I can assure you that
these FAQ's you casually refer to don't come out of thin air. If you
are going to ask lid@clueless.newbie.com to read a FAQ, it helps to
have a FAQ posted both to the group AND news.answers. I don't recall
seeing any FAQ on the amateur groups I've read recently, although may
have missed something---but the place we send new users to read FAQs
doesn't have one for the other rec.radio.amateur groups.

On rec.antiques.radio+phono, there is a rather lengthy discussion of
"antique" following the charter in the first part of the FAQ. One
input factored into this discussion is what works well on the group
and what doesn't.
>
>2. There is already a radio group that contains the name antique:

>rec.antiques.radio+phono, and our topics are *not* welcome on that
>group (check its charter).
>
I don't think this is a fair representation of what is welcome on rec.antiques.radio+phono. I have sitting behind me a Hallicrafters S-36A "Ultra High Frequency" receiver and, next to it, an RME-45 communications receiver, and while the hams may be interested in these, they are quite "on topic" for rec.antiques.radio+phono.

Our exclusion is of amateur-radio-specific topics such as the Collins series of receivers and transmitters which operate on amateur bands only. We do not make any distinction between hams and non-hams who want to talk about a National HRO or a Hallicrafters S-38, or Collins broadcast transmitters. Much of what we feel we are avoiding in the amateur-specific exclusion are things like the code vs. no-code controversy, which any reader of the amateur radio hierarchy has to be aware of, and the recent flap over possible reassignment of the 2-meter and other ham bands to sattelite services.

When rec.antiques.radio+phono was proposed (as a split-off from rec.antiques), the comments and discussion did include amateur radio, and much of the "exclusion" is to allow amateur radio to operate on its own turf. But the technologies used by amateur radio in the forties and fifties are by no means exclusively "ham radio and nobody else" technologies, and much of the technical expertise and talk available on rec.antiques.radio+phono is quite applicable to amateur radio use of older items.

>>In closing, yes Jeff (KH2PZ/KH6) I have owned several 'boatanchors'
>>through the years; old military gear, Drake Twins, and a Drake TR6
>>(still the best SSB 6meter rig ever made). Also I am a Tech, so what, I've
>>also been a ham for over 25 years.
>
>Again (and again!), a particular group is not meant to target *every*
>ham worldwide.

Obviously. But is it meant to target only those Gnostics who know specific jargon and who have and use amateur radio licenses?

>Keep in mind that the BA email list generates at least 70 articles per
>day which is more than many rec.radio.amateur groups (.policy, .homebrew
>.antenna).
>
So? The old amateur radio traffic on existing Usenet groups, which anyone can check by reading them is, in non-jargon English, mighty low, even if you define your "boatanchor" as "pre-1980 technology."

You are assuming that a Usenet news group parallelling the existing "boatanchor" mail list is going to pick up a lot of traffic that is now on that list. I've never seen any ground swell of opinion on the list looking for a Usenet group. Indeed, most of the discussion of a Usenet group I've seen there has been "we don't want any Usenet group

instead of this list." It would also appear to me that some large percentage of list people don't have access to Usenet. I base this on the steady flow of mail messages culled from rec.radio.swap reposted to the mail list, and the number of queries I have gotten asking how to "subscribe to" rec.antiques.radio+phono, followed by discussion of the fact that it is a Usenet news group and not mirrored to a mail list. I'll also note that when the boatanchor list became subscription only, about half the subscribers were dropped, and the increase in old amateur radio item discussion in rec.antiques.radio+phono was undetectable, if there was any.

This discussion about a name, with no RFD information, formal or informal, has gone on for over a month. I can only guess what might be in a newsgroup proposal for rec.radio.amateur.old-iron or any other name. Whether the proposal is going to exclude non-hams, whether it is going to simply be a duplicate of rec.antiques.radio+phono with amateur radio included, what the position on tube audio is going to be (not specious---every plate-modulated amateur transmitter has a big audio amplifier in it), are all unknowns. Much less whether there is support that warrants carrying it to a vote.

I've read just about every "Never Say Die" from 1961 to near the present. Usually, he'd have *great* ideas about how to build up amateur radio, both in the US and worldwide. But even back then, he'd get into occasional rants about the IRS, ARRL, FCC, etc.

Nowadays, he's drifting into wierd science and the like, or pitching ragtime music. Occasionally interesting, but does this do anything for amateur radio?

We might lose 2 meters, and the general public doesn't even know, much less care. Outside of disaster communications, hams are known only as "radio nerds that interfere with my $5.00 cordless phone and ruin our planned suburbs with their antennas". Unlike the cellular phone people, we don't "rate" with the general public anymore . . .

interesting

If you want my feedback they, in my humble opinion (tunners) are an
absolute piece of shit. I really like that 300 watt balun, take a
look at it and tell me if you would want to run more than 50 watts
to it. Some people I know had good luck with their tuners, but
the balun is underrated, and the circuitry is in no way a 300 watt
tuner, QRP yes 100 watts, maybe depending on antenna, any more or
using anything but a antenna close to resonance and using the
tuner to broden it as in cutting a antenna cut for 3750 and tuning
the entire band which it will do, I would think twice and as a
matter of fact had one of them blow up the output cap in a collins
100 watt transmitter, Quite a reality check. If you intend multiband use
with tuned feeders go find a johnson matchbox it will beat the pants off
of about anything else you will find, the matchbox dont cover 160
without modificationbut with a 135 foot flattop and 450 ohm feeders
after you get use to the way they work
you will have a good setup, no rap really against the mfj they just arent
what most people think they are and they get into trouble trying to
match systems at power levels they cant handle.

I hear these 'roger-beeps' all over the two meter band every where I
travel. They sure are popular. Does it really mean the club repeater
needs money? When I first started hearing them, they were called courtesy
beeps. Supposed to keep a little order on a busy frequency, slows down
tail-enders to allow breaks in conversation. Seems to work well on club
repeaters.

I agree with this approach. Congress has the purse strings so
bureaucrats must listen and discern (so difficult to do in an
election year).

>If the FCC persists in this plan:
>I would also suggest threatning a "class action" suit to recover damages
>for all the money you have invested in equipment you won't be able to use.

I think the FCC may be the wrong target in this campaign. As some have
noted this LEO thing is probably going to be international which
explains why the state dept.is involved (getting treaties and
international frequency agreements shoved aside, etc.). I do hope
the ARRL, CRRL, JRRL, RSGB etc. has plenty of money in their lobbying,
litigating war chests. With the richest man in the U.S. supporting LEO,
it may be the mother of all VHF/UHF frequency takeover attempts.

I recently read somewhere when the Radio Astronomy Folks raised a
concern about being blinded by the LEO's they were told very nicely
to take a hike.

>
>PS: The thought of upset hams jamming the band doesn't bother
>me much. If I bought the freq. at auction, I'd just sue the FCC until
>they busted and jailed a few people. Most people with enough expertise
>to "bother" my digital S.S. x-missions would have more sense.
>
I am not so sure about this. These puppies have to receive also.
What would happen if the LEO belt accidently strayed into my EME
10 KW ERP beam? -sort of my version of HAARP you know. One good
thing about this is that there are probably 100's of HAMs actively
involved in the LEO project. Since they are brothers of this same
fraternity would it not stand to reason the achilles heel of the
LEO's can be known in short order?

As far as busting people, the FCC has been defanged or put on a
short leash lately by the Fed. judiciary and congressional budget
cuts. Witness the closing of monitoring stations, field offices,
demoralizing personnel cuts and the court reversal of the pirate
fm broadcast action at UCB. Confiscation of EME equipment, digital
S.S. receivers, etc. would probably be turned over to the BATF and
FBI in the U.S.

More than likely, it's not that sinister. Most of the folks I've
worked with who were involved in spectrum acquisition would take
anything they could get. We've probably been targeted simply
because the frequencies aren't occupied by a commercial service.

>>Jack WB3U
>

I had some time tonight. I redesigned the main web page for faster download times. At 21,600 bps, the main page downloaded in 15-20 seconds. The newsletters, propagation and start/welcome sections have been simplified and moved to their own pages accessible off the main page. Everything is still there - just moved to new locations.

The main page has (at the moment) 3 graphics: the Ham Radio Online title banner (highly compressed JPEG at about 8kbytes), a picture of the Yaesu FT-50R (JPEG compressed at about 3.7 kbpytes) and the background graphics (4 kbytes). The overall text is about 12 kbytes, plus maybe another misc 2 kbytes (EFF logo, WA logo). That works out to about 30 kbytes total for the main page which should download quickly at 14.4 kbps. As soon as the 12 kbytes of text (hronline.htm) is downloaded, your browser should allow you to scroll around, even if the graphics are still coming in. 12 kbytes ought to download in 10 to 20 seconds depending on your modem speed, server load and Internet traffic.

Please write us at vbook@vbook.com and let us know what you think of the new design.

The June edition of Ham Radio Online is up on the web site. The number of articles should more than double from what is up there now. It takes a while to get the new articles edited so watch for new stories appearing over the next couple of weeks. Great product review on the Yaesu FT-50R. Lots of other goodies coming up soon.

Also, we redesigned the main page a bit for faster downloads.

Ah, thank-you Jim! You proved my point very well. Not all hams are
expected to know all of our terminology. That Ralph and his wife
have never heard of the term BA should not prevent a new group
from holding that name.

Now, where's that RFD?!

Hi Jim, The topics on the BA list now include *any* communications
radios with tubes. Originally, the list was just a mail alias devoted
to the DX-100.

I heard somewhere that it was because they could get a foot in the door here and nowhere else. With 8000+ satellites in orbit now, more are all we need anyway. Space junk floating around at 80000 miles an hour, and we can get beeped. I love it.

We should be dead ? Is that the idea of this all ? Hey, I got a great idea, why don't we do whatever we want on the airwaves, because as soon as someone says money, they can do whatever they want to, right ? Rumor has it that one of the biggest supporters of LEO is Bill Gates of MS, although I really don't know why he'd be interested. Every day I'm seeing more and more that supports the total " assholiness " of the plastic generation. I suppose if they had it their way, we'd all just be able to bend over and kiss their asses on request. Because hey, they're some really good guys, and one look at us will tell you how bad we suck.

Have they ever done anything on their own, original, or is this another attempt at crass commercialization of someone else's good idea? We're just curious, because we don't really have anything to lose anymore. See, they came and ripped us off before they put the bid in, and I'd worry about that statement, if there wasn't ample proof. Seems maybe they are interested in us, after all. God help the clueless.

2531. Re: Ham radio threat

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC
From: pcook@spieg.INTerealm.COM
Message-ID: <Pine.SOL.3.91.960601232307.10048C-100000@spieg.interealm.com>
Source record: 224084

To Ms.(or Mr.) Leslie Taylor:

I was going to send this via my ampr.org address as it would've been more effective, but connections just simply didn't allow it. But nevertheless here's MY $.02 worth....

I am a licensed Amateur Radio Operator. I have read some information about your "little LEO" program, and have to say that I am disturbed to say the VERY least.

Although I am not at all surprised at you directly, as you are just doing your job, HOWEVER, I *AM* surprised that the FCC would even consider such an idea (especially since it involves the 2 meter band).

However, instead of just "flying off the handle" and pointing the finger at you and basically being a "potty mouth" via cyberspace, I *will* show you just HOW the loss of the 2 meter & 70 cm. frequencies will affect the Amateur Radio Service.

First off, for all those who are receiving Cc's of this letter, I will be explaining (as best as I can) this in a manner in which Ms./Mr. Taylor can understand (sorry I don't know your gender, Leslie), which will be in "layman's" terms. :-)

Let's start out with that funny looking address in the Cc field that says kb0oxd@bbs.n0iak.ampr.org First off, kb0oxd is my callsign (only we use all caps when we type it so it's *actually KB0OXD). That explains the prefix. The next part is really self-explanatory. I am sending this message to my mailbox on a BBS (Bulletin Board System) n0iak is a human being who is an Amateur Radio Operator like myself. His name is Ted Cross, and he is the sysop (System Operator).

The ampr.org part is where the problem resides between your idea and our usage of the frequencies you propose to consume. The term "ampr" stands for AMATEUR PACKET RADIO. There are MANY Amateur Radio Operators like
^^ ^ ^
myself who have put similar stations on the air. This group of Amateurs have formed a network consisting almost NOTHING but 2 meter & 70 cm Amateur Radio frequencies (the phone system makes up the rest).

When I send this message off, MANY of these stations will see - AND TRANSMIT - this message (over the same 2 meter & 70 cm. frequencies that you propose to take) AS IT IS DELIVERED TO MY MAILBOX.

There is yet another form of what we commonly call "packet radio". This form is AX.25 packet. This network HAS no telephone gateways or anything of that nature for users to access the system and mail to be delivered. It is all

done SOLELY by 2 meter & 70 cm (as well as other bands) Amateur Radio frequencies.

In short, your proposal will DESTROY all the work and effort ALL the work put in to make this system BOTH reliable AND easy to use in BOTH normal AND emergency situations. There's NO other system like it short of the Internet itself.

The ampr.org is part of what is also commonly referred to as the AMPRnet. Because this network is TCP/IP based (like the Internet itself), and because this system is still fairly new, and there are fewer stations using this software on the air, this system will not only be DESTROYED, but all the work and time put in by EVERYONE within the TCP/IP Working Group would be a SHAMEFUL waste of their time, energy, sanity, and expertise IF your proposal should come to pass.

Next, we have the emergency communications side of things. Tucked away up in the hills, atop tall buildings, and even (in some cases) people's OWN HOMES, are devices that are commonly referred to as REPEATERS. These devices can enhance the signal put out by a single handheld ham radio. With these MARVELOUS little wizards, we can use them to pass emergency traffic during major disasters such as earthquakes, floods, or even forest fires, to appropriate people and agencies to assist them in overcoming their own communications barriers or when their systems become overloaded or are completely down, so they may focus on providing relief efforts to victims, or those who have lost loved ones.

How many times have YOU been thankful that someone was there with you during these situations?? There have been MANY people who have been thankful, and even some of them have gone on to become Amateur Radio Operators THEMSELVES!!! Should your proposal come to pass, YOU will end THE BEST - if not MOST EFFECTIVE - way possible for us to continue to provide emergency communications when we are called upon to do so.

While it *is* true that as technology improves and brings about change in our daily lives, and will eventually create the "phasing out" of Amateur Radio involvement in CERTAIN situations, it will NOT be able to replace the ONLY _RELIABLE_ means of radio communication known to mankind during those times when telephone service is down, or when there is no other way to communicate to the outside world. Our fellow Amateurs on the Islands can concur with this assessment during hurricane season and a hurricane is battering them.

Finally, there's the EDUCATIONAL side. Did you know that Amateur Radio Operators are the ONLY civilians who can talk DIRECTLY with the astronauts on the Space Shuttle during certain missions?? We can. Through the advent of Satellite technology, we can talk DIRECTLY to the astronauts just as if we were on the telephone with them. We can do so via digital communications (another advantage of packet radio) or voice communications. The program that makes all of this possible is called SAREX (Satellite Amateur Radio Experiment), and the space program flies certain missions under the program's umbrella to do basic routine maintenance of all those satellites orbiting around us, or to deploy another one. Whatever the mission, the SAREX program

makes it possible for those astronauts, who are licensed Amateurs themselves, to communicate with us.

There's another satellite program spearheaded by Amateurs that has not only utilized - but has made possible - satellite technology as a means of communications between OURSELVES!!! This program is called AMSAT (for Amateur Satellite). They even have a Web site that (I believe) has the URL of:

http://www.amsat.org (Somebody correct me if I am wrong)

I encourage you to view the AMSAT Web site. I think that once you do, you'll want to work WITH AMSAT and the Amateur Radio Service, instead of AGAINST us, IMHO.... :-)

We "Amateurs" are better known as "experimenters". We experiment with things (and ways of communicating) that eventually come to make our daily lives easier. One last example, did you know that when you pick up a Cordless or Cellular telephone and start talking into it, you're *really* talking into a radio?? Believe it or not, you are?? ANYTHING that's wireless AND has to do with communications generates what is called RF (Radio Frequency), and that RF signal can be heard by ANYONE with a receiver capable of receiving the transmitter's (meaning your phone) frequency (although technology has improved to the point whereas it's rather difficult to receive your conversation PROVIDED your Cordless phone is one of the newer models (the reception of Cellular phone communications is illegal, however).

I have perhaps bombarded you with enough information to last you a lifetime. I just wanted to write to you to PLEASE re-consider what you're about to do if your proposal to the WRC in 1997 passes. IMHO, *I* think your idea has great potential for the benefit of the Amateur Radio Service. I just hope you'll take the time to consider this letter as you reach the final draft stages of your idea.

Finally, I also hope that we can work WITH each other and NOT against each other.

Best Regards (`73' in Amateur Radio jargon),

Patrick Cook, KB0OXD
Denver, CO

Internet: pcook@spieg.interealm.com
AMPRnet: kb0oxd@bbs.n0iak.ampr.org
AX.25: KB0OXD @ N0IAK.#NECO.CO.USA.NOAM

P.S.: I'll scan the rec.radio.amateur.misc newsgroup here as well as all the appropriate areas on my AMPRnet BBS where 2 meter and/or 70 cm. Amateur Radio communications have provided aid in the wake of relief efforts following recent disasters. I'm sure some of the others can do the same. :-)

2533. FTP-51R Modifications For 800 MHZ as well

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-02 00:00:00 UTC
From: ronen@netmanage.co.IL
Message-ID: <Chameleon.4.00.6.960602115224.ronen@ronen.netmanage.co.il>
Source record: 224086

Hello All

Following is a Instructions for the FT-51R Modif for Out of Band As well as 800 MHZ

1) Jumpers 1 and 3-7 have to be opened and Jumper No 2 have to be closed
(for eropean models jumper No 4 have to be closed as well)(closed = Jumpered)

2) Turn on the radio While you simultanuesly pressing the up two volume Buttones
(Volume Up and Volume Down) and the call button.

3) Press F (function for more then One Second)

4) adjust the Display With the up or Down arrows) to see Band 7 , When done
Press F and afterword Call buttones.

5) Turn Off the Radio

6) Turn it on While you press simultanuesly the up and down Arrows

7) Repeate steps 2 to 6 twice per every VCO (Every Band).

After the Modifications are done , the Radio will receive (show in the Display)
50-999 MHZ for VHF
60-999 MHZ for UHF
and (supprise) 800-999 As well...
Note , The radio I have done it Did NOT receive anything on the 800MHZ , which lead
to a suspect that the radio have NO RF Unit for 800 MHZ , But another radio ,
(the one I got the modification from) Receive very well the 800 MHZ

Good Luck
Ronen - 4Z4ZQ

Hams would roll over in a second. In fact for the few that didn't the
others would turn them in.

One of the people heading up the effort to reallocate our freqs is Warren Richards of the state dept. I called him today (202 647 0049) to express my concern and to get more info. This guy was very very hostile, saying the ARRL is spreading "bullshit". He accused hams of trying to intimidate him (we wouldnt do that, would we?), and said "do you know how many GODDAMN emails I have from you people? (email richardswg@ms6820wpoa.us-state.gov). He also said he wasnt interested in our opinions, and that the freqs will continue to be considered for reallocation.

From K1OIK:
Every ham should make every effort to call Warren Richards and send him EMAIL and give him 100% support

FOR IMMEDIATE RELEASE

MAY 30, 1996

LAMBDA AMATEUR RADIO CLUB ANNOUNCES REVISED WORLD WIDE WEB SITE
AND NEW EMAIL ADDRESS

The Lambda Amateur Radio Club, (LARC) is pleased to announce the
availability of our newly-revised World Wide Web home page. The URL is:

http://www.netaxs.com/people/skeptic/larc

This web site contains general information about the club, its history,
goals, and accomplishments, and includes contact information in several
different foreign languages.

LARC has also established a new club email address for inquiries and
requests for information. The new email address is:

LARC@net-quest.com

The Lambda Amateur Radio Club (LARC) is an international public
service-oriented organization of gay, lesbian, bisexual and transgendered
amateur radio operators ("hams"), short wave radio listeners and persons
interested in amateur radio and computer technologies ... and their friends
and supporters.

Since we believe that we can only do public service work if we're visible,
LARC is non-closeted. We are the only open and visible club for G/L/B/T
hams, electronics enthusiasts, and computer hobbyists, and their
non-G/L/B/T friends and supporters.

>What does this have to do with Amateur Radio? It is bad enough getting
>junk snail mail, now we have junk e-mail on the newsgroups. This guy
>needs to get motivated and do something useful besides junking up the
>internet with chain e-mail.

Well, Stanley, I guess it has a much to do with amateur radio as it
has to do with all the following newsgroups, which is where you sent
the above message:

rec.org.sca,rec.pets,rec.pets.birds,rec.pets.cats,rec.pets.herp,rec.puzzles,rec..puzzles..
crosswords,
rec.pyrotechnics,rec.radio.amateur.misc,rec.roller-coaster,rec.running,rec..scouting,rec..
scuba,
rec.skydiving,rec.sport.baseball,rec.sport.baseball.fantasy,rec.sport.basketball..misc,rec
..sport..cricket

Most of us agree that the chain letters don't have anything to do with
anything, but the best way to fix the problem is to let the sender
know you feel that way, as well as admin, webmaster, and postmaster
at his site. If three people in each of the above newsgroup agree
with you and send a reply like you did, then we have 99 more pieces
of junk mail in 33 different news groups. Most people who send the
chain letter have no idea what the results are going to be when they
send them, but they usually find out quickly the next time they read
their email. I doubt if they check newsgroups looking for replies.

73, Jim KH2D

2543. Chicago Area Hams - Volunteers Needed

It happened for real a few years ago when UPS paid off the FCC to give
them 220-222 MHz from the amateur band. Then again, at the time the
FCC didn't have a mandate to sell of the electromagnetic spectrum to
balance the budget. The FCC did it once they can certainly do it
again if someone crosses their palm with a few pieces of silver.

As for hams using frequencies that are not allocated to amateur radio,
that would be illegal and would be punishable by revokation of their
licence and a monitary fine. Personally, I'd rather gripe and
complain and use my radios as paperweights than lose my licence
forever.

When I first saw the bulletin, I immediately assumed it was a forgery.
I e-mailed the New England director and vice-director and they wrote
back to confirm that the bulletin and threat is real.

Personally, I think it is just bureaucratic stupidity that made them
not take the amateur frequencies off their list of candidates than any
malicious activity. Then again, if you believe that black helicopters
are flying over your house....

Burt: YOU are the one who's spreading BS in this newsgroup.
YOU are the ONLY one who would LOVE to see Amateur Radio as we
know it come to an end.

So, therefore.....

YOU should be the one to write, email, FAX, even PERSONALLY visit YOUR
congressional representatives, and leave the REST OF US ALONE!!!

Better yet, Burt: Next time the Space Shuttle goes up on a SAREX mission,
book a one-way ticket to the MOON!!! (Although PLUTO would be a MUCH better
place).

This way, we can hear the astronauts (who are hams) announce via repeaters
that re-transmit live shuttle audio, that you have been safely deposited on
the planet surface. Who knows, you could colonize a whole NEW world!!!

Gee, I wonder what ITU Region covers the Planet Pluto.....

We've only heard from ONE government representative. ONE representative's opinion does NOT reflect that of the ENTIRE US Government, however, as Dave Sumner said, THE FACTS _ARE_ ON *OUR* SIDE!!!!

So, with that, I'll say that WE will win!!! I could care less what Mr. Richards thinks of us as he obviously seems to think that those who chase storms ARE those in the Amateur-based SKYWARN program. :(

The thing that really pisses me off about UPS is that they didn't even
end up using it. Although I think they are today it was a complete
waste.
>

{Begin theoretical situation}

Ok, so my friends and I continue to use 2m and 70cm. Hell, I'll even
ID my station. So they send me an NAL and I refuse to pay it. When they
come to get me they'll be staring down the barrel of a 12 gauge.
So tell me, do they send out the National Guard to bring me down? Just look
at the mess in Montana, or those at Ruby Ridge and Waco.

{End theoretical situation}

I'm thoroughly sick of government and big business doing what they
want to the little guy. It's time to fight back! And fighting back
may very well mean the next american revolution. I'd say it's long
overdue.

Of course the more interesting thing will be the race war that starts
in California and then Florida. The U.S. Military is by and large
comprised of minorities and do you think for one minute they'll
defend the U.S. against their "brothers"? Government had better start
looking at the real problems in this country before it's too late.

Sorry to go off on a political tangent but I just had to.

Boatanchor is an affectionate term for older, usually tube based, out of
production radio equipment. Many of us are interested in the restoration
and use of this kind of equipment.

> My association with this word I think of out dated, not properly working
> equipment, that are only good enough to be used as ballast or dead weight
> or withg a rope on it as a boat anchor.
>
> But if that is true, why spend a news group on it?

It is one meaning, but not the only one, and certainly not the one used
mostly by hams in the old radio mailing lists.

> I don't like to see again those posts about my rig is better than yours;
> yours is dog s??t; toss it overboard ("boatanchor"). Whit this kind of
> postings we all can do without.

I agree, but that's not the kind of postings we're talking about. What
you see typically are questions about where to get parts for Heathkit
Apache, or how to adjust your Johnson Viking, or discussions on what
kinds of tubes can be used to replace one you don't have.

If you like, I can send you instructions on how to subscribe to the
"boatanchor" mailing list to see for yourself.

On the other hand, I found the signal to noise ratio to be very low on
many occasions. I unsubscribed for several months.

>I don't discount the fact that the proposal to create a boatanchors
>newsgroup grew out of problems with the list subscription concept, but
>about half of us bailed after it went to subscription.

Quite true . I unsubscribed permanently when the list went on a
fee-basis. Just a matter of principle. I am on a number of other
lists relating to other hobbies. Folks run them for the love of the
hobby, and there doesn't seem to be hardly any "bitching and moaning"
like I saw occasionally on the boatanchors list. Maybe photographers,
scuba divers, pilots and musicians aren't as prone to "bitching" as
radio buffs!??

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

* Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights
into DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Steve Coletti

MAINTAINER OF ADVANCED COMPUTER CONTROLS (ACC) AND LINK MAILING LISTS

The ACC list has approximately 60 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

LINK COMMUNICATIONS WORLD-WIDE WEB HOME PAGE:

http://www.link-comm.com/linkcomm/

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having

gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

Matthew A. (Matt) D Alessio KC6VIM

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76

of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

Jack G.F. Hill W4PPT

Jack, W4PPT/M (75M SSB 2-letter WAS #1657/#1789 -- both from the mobile! ;^)

root@jackatak.ThePorch.com - "Plus ca change, plus c'est la meme chose"

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

HIGH-PERFORMANCE SOFTWARE MODEM PROJECT

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory

for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "PACKET AND DIGITAL NETWORKING" category in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the

National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server

above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority

delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

CIVIL AIR PATROL

CO-HOST - HAM RADIO AND MORE

Ham Radio and More is available for free to any AM station that is willing to run it with national ads intact. If you want there to be a nationwide amateur radio talk show, call your local station and ask them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at +1 508 460-0588.

Effective 4/7/96: WWCR shortwave will air the show LIVE each Sunday at 6:00pm ET, (2200 UTC) on 7.435 Mhz AND 12.160 Mhz. Also, tape delayed at 5:00am ET (0900 UTC) Mondays on 3.315 Mhz and Saturdays at noon ET (1600 UTC) on 12.160 Mhz.

Call in and be part of the show. The toll free number is +1 800 293-5366 and outside the country at +1 602 230-2755. Fax at +1 602 241-1540.

See the entry for Cheyenne Greatorex for the Ham Radio and More World-Wide Web Page.

ANTENNAS

Terry Muncey WB5OAS

tsm@flash.net

TERRY MUNCEY DBA RADIO ERA ARCHIVES:

http://www.flash.net/~tsm/

Schematic information, service information and original replicas of operation manuals for most ham equipment are available. We have over 100,000 schematics already converted digitally for mailing or faxing as well as thousands of original operation manuals.

Bob Myers KC0EW

Hewlett-Packard Co.
Ft. Collins, CO

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a

display engineer in "real life", have done my share of digital design,
and have taught communication electronics at the local community
college. I'm also active in some display and television standards
activities.)

AMATEUR RADIO: ELMERS LIST SUBJECT QUICK-SEARCH INDEX

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Schwartz (NYC EC for Operations)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Roth (Portland, OR Area Coordinator)
* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Brothwell (BARTG Secretary, WWW Page, and Anonymous FTP Archive)
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of
PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)

* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Ihry
* Mouw
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Reynolds (including HF)
* Rymell
* Salnick
* Salyzyn
* Sarrio
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* Thomson (wire HF)
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's and WWW Page)

* Hill (Mailing List)
* Keys (including HF and CW)
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Paperman (Manuals, Service Information, and Literature)
* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Greatorex (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page)
* Stader (List of Amateur Radio Software)

BATTERIES

* Hammill (Sealed Lead-Acid)
* Myers
* Sefranek (including Solar Operation)

BRITISH AMATEUR RADIO TELEDATA GROUP (BARTG)

* Brothwell (Secretary, WWW Page, and Anonymous FTP Archive)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Meredith (F6FBB Packet BBS Support)
* Reeves
* Stillinger (IBBS)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Ihry
* Keys (including CWIST HF CW Net)
* Salyzyn
* Sarrio
* Silva
* Stine
* Stockton
* van de Kerk
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Ihry (General Electronics)
* Lord (including Radio Doctor's WWW Page)
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Standerfer (Test Equipment and Measurements)

* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation, Test Equipment, and Measurements)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dawson (Linux HAM and AX.25 HOWTO's)
* Dodell (rec.radio.info Newsgroup)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)
* Salyzyn (Hams on Usenet)
* Seney (Digital Storage Scopes)
* Stader (Macintosh Amateur Radio Software)
* Turvey (United Kingdom)
* Twigger (Amateur Radio Exam Practice WWW Page)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)
* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)
* Merritt (WWW Page)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al
* Tice (Manager, Courage HANDI-HAM System)

HIGH FREQUENCY (HF)/CONTESTING/DX

* Bertolino (425 DX News and IOTA WWW Page)
* Brubaker
* Chilton
* Coyle (including Station Setup for New Hams)
* DePolo
* Elmore (DX'ing, Contesting, and Propagation)
* Gilbert
* Hill (Mobile)
* Kumagai (CQWW Committee Member, JIDX Committee Chairman, Japanese DX Contest Mailserver and Mailing List)

* Madsen, et al
* Martz (Bay Area, California, DX'ers WWW Page)
* Nerenberg (DX Mailing List)
* Salnick
* Sarrio (CW)
* Silva
* Simpson (Best of 75 Net)
* Thomson (Mostly CW)
* Tidd (DXCC Databases)
* van de Kerk (CW, Low Profile)
* Veres
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Bruhns (including Low-Level/Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Carruth (Digital Design, Software)
* Chilton
* DePolo
* Edwards (including DSP)
* Elmore (Construction Practices)
* Gilliver (DSP, Blind Issues)
* Gunton (Microwave Components/Techlock Distributing WWW Page)
* Halbert (QRP)
* Hall (including DSP WWW Page)
* Hill ("Glowbugs" Tube Homebrewing Mailing List)
* Ihry (General Electronics, Towers, Computers and Computer Programming)
* Keys (Junk Box Projects, National Electrical Code for Hams)
* Kohnen (Tubes)
* Lau (Transverters, VHF/UHF, Filters, Repeatable Projects)
* Myers (Transmission Lines, Analog and Digital Design)
* Ornitz (Chemical and Toxic Material Use and Handling)
* Rymell (Electronics and Computers, Low-Cost Projects)
* Salyzyn
* Sayer (Class-C Bipolar Amplifiers and Phased-Lock-Loop Circuits)
* Sefranek (Amplifiers, Battery/Solar Operation, Power Supplies, and Repeaters)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Stine (Tube Amplifiers, Receivers, and Exciters)
* Stockton (including QRP)
* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Woods (Mail-Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

* Angus
* Bellville

* Bono (AutoExam, et al)
* Cole
* Crick (Windows, Ham University)
* Currie (DOS, Windows 3.x & 95, Linux, Hardware)
* Dawson (Linux on Intel)
* Ehrlich
* Hieber (DOS and OS/2)
* Keller
* Perens (Linux for Hams CDROM)

INTERNET SERVICES

* Bellville
* Currie
* Schleck
* Taylor

LOW FREQUENCY (LF)

* Thomson (LF/MF Radiobeacon DX'ing)

MAIL/FILE TRANSFER PROTOCOL (FTP)/WORLD-WIDE WEB (WWW)/MULTIPLE-USER DUNGEON (MUD) SERVERS/ARCHIVES

* Stockton (UK)
* Witte (Japan)
* Zurn (Italy and Germany)

REPEATERS

* Bellville (2m/6m/440)
* Chilton
* Colwell (Advanced Computer Controls and Link Communications
Repeater Controllers Mailing Lists)
* DePolo (VHF/UHF Design and Construction, Database Manager -
EPA/SNJ Repeater Coordination Council)
* DeWolf (Repeater Linking, St. Lawrence Valley Repeater Council
Frequency Coordinator, Past President of the Champlain Regional
Repeater Association)
* Gilbert (State Frequency Coordinator, TX VHF-FM Society)
* Halle (AZ Repeater Association)
* Keller (220 Mhz)
* Killebrew (VHF and UHF)
* Madsen, et al
* Rose (AZ Repeater Association)
* Sefranek (Building and Maintaining)
* Wilkins (including UHF)
* Witte (VHF and UHF)

SATELLITES/ORBITAL SATELLITE CARRYING AMATEUR RADIO (OSCAR)/SHUTTLE AMATEUR
RADIO EXPERIMENT (SAREX)

* Bertolino (RadioSputniks and DOVE Telemetry)
* D Alessio (Branson School SAREX Project Coordinator)
* Estes (Mostly Analog, Some Digital, and SAREX)
* Gilbert

* Karn (SQPSK Software Modem)
* Marchant (SAREX School Group Technical Mentor)
* Roth (Portland, OR Area AMSAT Coordinator, All Modes including AO-13 Mode S and Weather Satellites)
* Stillinger
* Williamson, P (InstantTrack, OrbitDRV, AMSAT Services)

SCOUTING

* Cieslak (Radio Scouting Merit Badge Advisor)
* Halle (Explorer Post Advisor)

SEMINARS/LECTURES

* Humphries
* Redding
* Sussman (Speaker and Host of PACTOR Forum at Dayton Hamvention)

TELEVISION, FAST-SCAN (ATV)

* Chilton
* Hammill
* Larson
* Ruh (ATV Quarterly)
* Veres (UHF and 2.5 GHz ITFS TV)

TELEVISION, SLOW-SCAN (SSTV)

* Langner

TUSCON AMATEUR PACKET RADIO (TAPR)

* Ackermann (Net-SIG)
* Buelow (BBSSIG)
* Goldstein (WWW Page, TNC-2 Firmware)
* Nielsen (File Server and E-mail Contact)

UNIX

* Angus (including SCO Xenix TCP/IP and Sendmail)
* Carruth (System Administration, Phoenix, AZ Linux Users Group)
* Cole (including Linux)
* Dawson (Linux HAM and AX.25 HOWTO's)
* Ehrlich
* Hieber (Linux)
* Killebrew (including Linux and TNOS)
* Nerenberg (especially System Administration, Networking, and Electronic Mail)
* Perens (Linux for Hams CDROM)
* Salyzyn (including NeXTSTEP)
* Sayer (especially SunOS)

VERY HIGH FREQUENCY (VHF)/ULTRA HIGH FREQUENCY (UHF)

* Bellville (2m/6m/440 AM/FM/SSB/Packet/QRP/Repeaters)
* Coyle
* DePolo (VHF/UHF Repeaters, Weak Signal, and Contesting)
* Deutschmann (Radio Amateurs International Awards Registry)
* Glago (including Public Service Communications)
* Hammill (including ATV, Weak Signal, and DX)
* Humphries (2m FM)
* Killebrew (VHF and UHF Repeaters)
* Larson (Weak Signal)
* Lau (CW/SSB to 222 Mhz)
* Reynolds (VHF/UHF)
* Silva
* Stillinger
* Thomson (Commercial VHF and UHF)
* Veres (Amateur and Commercial Radio and UHF TV)
* Wilkins (UHF Propagation)
* Witte (including VHF and UHF Repeaters, Portable, Mountaintopping,
and Colorado 14er Radio Event)

VOLUNTEER EXAMINER (VE) AND INDUSTRY COMMUNICATIONS CANADA (ICC) EXAMINER
PROGRAMS

* Ardai (ARRL VEC Mailing List)
* DePolo (Univ. of Pennsylvania ARC VE Team Leader)
* DeWolf (Industry Communications Canada Designated Examiner)
* Jahnke (ARRL VEC Manager)
* Kohnen (W5YI)
* Kumagai (Tokyo, Japan W5YI Contact VE)
* Maia (W5YI VEC)
* Reeves
* Sefranek (ARRL and W5YI)

As is typical of you, you didn't tell the whole story. You conveniently omitted the last couple of words in my post..."the government." Tell me, Jim, just how has an act of the government rendered my computer and modem worthless?

Propagation Forecast Bulletin 22 ARLP022
From Tad Cook, KT7H
Seattle, WA May 31, 1996
To all radio amateurs

SB PROP ARL ARLP022
ARLP022 Propagation de KT7H

Last week we reported that the solar flux for May 22 was 66. For those who keep records, It was actually 66.4.

There were no visible sunspots for the past six days, and solar flux was down a couple of points. Expect very quiet conditions to continue, with very little solar activity.

Around June 8 a slightly rising solar flux should peak just above 70, and then fall below 70 after the middle of June. The most disturbed days over the next month are predicted to be around June 9 and 10, but with a predicted A index of only 12, so a major storm is not expected. This is from disturbed areas observed during the last solar rotation coming back into view.

Sunspot Numbers for May 23 through 29 were 12, 0, 0, 0, 0, 0 and 0, with a mean of 1.7. 10.7 cm flux was 67.2, 67.2, 66.9, 66.9, 66.6, 66, and 66.5, with a mean of 66.8.

2565. Re: HF AM operations

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: dslosty@usa.pipeline.com
Message-ID: <4otu8p$5hg@news1.t1.usa.pipeline.com>
Source record: 223906

Do I detect a little bias against AM operation?
Except for a few abusing stations, no AM stations that I've
recently heard or worked are splattering 12khz. While,
the average bandwidth of an AM station is indeed 6kHz versus
3 khz for SSB, there are not AM stations on the air for this to
cause a problem.

I've heard many more over-modulated, over-processed, splattering
SSB stations than I've heard from AM stations.

In any event, the most popular frequencies for HF, AM operating
are 3.885khz (plus or minus 25 khz), and 7290 khz.

73,
Doug/WA1TUT

>I started to think that Wayne had flipped about 10 years ago. I distinctly remember reading one of his famous editorials extolling the virtues of the code. Last year I read an article where he said abolishing the code was the best thing that could happen. Huh?

Then he started in with the Scientology crap and how it changed his life back in the 50's.

I will in no way subscibe to his 20 page magazine. He's managed to run off advertisers and subscribers with his dumb assed editorials that make absolutely no sense.

If I read one more time how he pioneered 2 meter repeaters, HT's, SSB, packet, internet, AM broadcast radio, nuclear energy, cold fusion, fire, the ARRL, and that he was a war hero in the Navy, I'm going to puke.

Love and kisses:
Just shutup and learn the code!

2567. SPECIAL EVENT

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC

The Garden City Amateur Radio Club of Garden City, Michigan will be holding
a special event station on June 15 and 16. The operating times will be from
1400 to 2000 UTC and will be operating on 7.255, 14.255, 21.330 and 28.380.

The G.C.A.R.C. will be operating out of Greenfield Village and is in conjunction with the 100 anniversary of the Automobile and the Motor Muster road rally that will be passing through the Detroit area.

So if you have nothing to do during the weekend of June 15 and 16 look for
the Garden City Amateur Radio Club's Special Event Station and try and make contact with us. We will be listening for you...!

>Something about ACSSB?

Whatever the narrow spectrum stuff UPS was going to use they were supposed to drop it in favor of readily available FM gear. Why doesn't someone look at the usage (several cities) and see if it is being used. If the usage is light maybe a report to the FCC and ARRL might be in order.

2572. HAMS BUST A POLICE JAMMER !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: narc@pacifier.com
Message-ID: <4ov8fa$hj3@news.pacifier.com>
Source record: 223913

held, A group of hams belonging to the PARG (Phantoms Amateur Radio Club) were down on the beachfront enjoying their yearly bonfire. One of the hams (kb7yzs MIKE) was monitoring the local Seaside Police Dpt. He heard someone cursing and yelling at people. At first he thought it was comming from his uhf side on his ht, but to his surprise it was comming from the vhf police side.
He promptly notified everyone at the fire to listen. After about 4 minutes of listning to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.
So 4 members in the group (kb7yzs, kb7yzr, n7xmd, and yes even aa7up) left the fire to search for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his ht and and speak into it. At the very same moment the voice on the police freq was saying " Hey, fat ass, ya you in the black pant and the white shirt" while he was saying this on the SPD frequency the memebers noticed a man wearing those cloathes, a little on the heavy side walking directly underneath them.
One of the members saw a patrol car in the area. He approached the officer and asked him if he was looking for a person causing interference. He seemed very upset and replied YES! We informed him we knew where it was comming from.
The other 3 memebers were on their way to the third floor when they saw the of the people running down the stairs and away from the shilo.

The officer took a report and spoke to the hotel manager. After 2 hours the jamming started up again. The SPD officer went directly to the room the PARG members pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. the aftermention is second hand knowledge from speaking to a friend of the officers and a friend of the suspect.

The man in question is from Central California up here for the ham convention. Aparently he was realesed from jail only a few days before this incident. The charge he was in for was malscious interference to the local police in his area. (REAL SMART GUY) . This obviously did not teach him his lesson. I understand the charge seaside brought againsted him was, interference of a police officer while performing his duties.

Signed, PARG BOARD of DIRECTORS

Sells new for $320. Purchased, unpacked, repacked by original owner.

Three element trap yagi antenna, very solid, all aluminum with stainless steel hardware. Compact, only 27 pounds, gives roughly 8 db gain with 25 db front/back ratio.

15.5 ft turning radius,

I got it with an HF rig and can't put it up. Still in box, I unpacked it and repacked it (did my best to verify everything was there).

Perfect (new) condition, in box with manual. Asking $250.

Anyone ever hear of this cable type, or better yet, have any specs on it? I purchased some at Dayton; it's supposed to be 50 ohm 1" hardline. Before I invest the time into changing the antenna to an "N" connector & installing the cable, I'd like to be sure of what it is.

Thanks!

One of the objections to the proposed boatanchors newsgroup has been the question of exclusion of non-hams from the discussion. How much of an issue was exclusion when your newsgroup was being discussed?

>You are assuming that a Usenet news group parallelling the existing >"boatanchor" mail list is going to pick up a lot of traffic that is >now on that list. I've never seen any ground swell of opinion on the >list looking for a Usenet group. Indeed, most of the discussion of a >Usenet group I've seen there has been "we don't want any Usenet group >instead of this list." It would also appear to me that some large >percentage of list people don't have access to Usenet. I base this on >the steady flow of mail messages culled from rec.radio.swap reposted >to the mail list, and the number of queries I have gotten asking how >to "subscribe to" rec.antiques.radio+phono, followed by discussion of >the fact that it is a Usenet news group and not mirrored to a mail >list. I'll also note that when the boatanchor list became >subscription only, about half the subscribers were dropped, and the >increase in old amateur radio item discussion in >rec.antiques.radio+phono was undetectable, if there was any.

When I was on the boatanchors list, most participants were happy with things the way they were on the list. Sometimes lists work better than newsgroups, in terms of signal-to-noise ratio.

It will be interesting to see how much traffic the newsgroup will carry. I don't see a lot of people who are on the list, moving to the newsgroup. Rather, it seems as if some of those who are on the list, will participate both places.

I don't discount the fact that the proposal to create a boatanchors newsgroup grew out of problems with the list subscription concept, but about half of us bailed after it went to subscription.

>This discussion about a name, with no RFD information, formal or
>informal, has gone on for over a month. I can only guess what might
>be in a newsgroup proposal for rec.radio.amateur.old-iron or any other
>name. Whether the proposal is going to exclude non-hams, whether it
>is going to simply be a duplicate of rec.antiques.radio+phono with
>amateur radio included, what the position on tube audio is going to be
>(not specious---every plate-modulated amateur transmitter has a big
>audio amplifier in it), are all unknowns. Much less whether there is
>support that warrants carrying it to a vote.

There's an interesting article currently on news.groups, about how to
get a new newsgroup passed painlessly. Specifically, how all of the
pre-RFD discussion that has occurred here might prejudice the voters.

If the prospective use of the equipment is for an emergency type
situation (which I thought it might be judging by your use(?)), i
would stick well clear of a homemade switcher. The reliability of such
devices is generally pretty awful. One possibility might be to design
some kind of reflector system that would increase the typical output
of the 12V system. Maybe using Aluminium foil. If the voltage is still
too low for some of the time, it might be possible to use high
performance Nicads as a back up - the type often used for RC cars are
often good as they are well suited to heavy duty use, are small, and
you can often get them with solder tags making joining them together
easy.
If you are determined to use no batteries, or if you really need the
regulation then I'd stick with the wasteful linear regulators and run
them at 24V. I suggest you use one of the following chips:
LM338K-STEEL or LM338K or even LT1084CT (but check that this one can
handle the intermitant 34V input) which is a low drop out type so it's
input voltage can be taken real close to the output. All these
regulators can handle 5A anyway (with heatsinking!!)so you won't have
to mess about with pass transistors. After all if your energy is
coming from the sun it don't matter too much if you waste a bit.
You could also try some kind of intermediate solution using the solars

to charge batteries in times of excess light- such charging circuits
are pretty widely available, and then using the batteries when the
solars output drops low, again such alternate power circuits are
available in mags. and books.
Switchers are good for efficiency.But take a look inside a modern
switcher!- they are complex as hell. Homemade devices just don't
compare efficiency or reliability wise.
>Project 2:

>I work with a local repeater group, and we've come up with some

>a toroidal transformer, and standard linear supply after that, I thought
>that a switcher could give me a much higher efficiency.

Yes a switcher might not be a bad idea here. Look in some switching
power supply books for ideas - if you are building switchers it's a
good idea to know as much about it as you can- a book on the topic
would be a good idea. (I live in the UK so I don't know where you'd
look for such books. in the UK electronics mags have such titles
advertised as do catalogues.)
Your inverter type design might well work fine. but from experience
I'd use a circuit from a book, you can end up getting about 20%
efficiency otherwise. I use a very similar circuit for producing 35kV
from a car ignition coil, and that only gives around 15-20%
efficiency. Though that's a rather extreme example I admit!
If you are running from Lead Acid batteries. you likely have more than
one. Have you tried using a series config. of batteries. 28V equipment
may well work off 24V without any problems.

Hope this helps a bit. Maybe someone else could suggest some good
switcher books for plans etc.

John

In article <31AA0599.7040@aloha.net> Jim Reid <jreid@aloha.net> writes:
>
>All nation's amateurs use the present European amateur band frequency
>operating plans. An amateur licensed by any nation signatory to the
>ITU treaty, may operate, with his certified operating endorsements,
>in any other treaty nation with notification to that nation's proper
>authorities.
>
Nope, sorry...this SUCKS! The ITU and the IARU needs to get it thru
their !@#$%^&* thick skulls that there is ABSOLUTELY NO REASON AT ALL
for shortwave broadcasting to occupy the 7.0-7.5MHz region of the HF
spectrum!

I know, I know.."Its a traitional place for broadcasters.." Yeah right!
..fuck em! It's easier to move several hundred broadcast transmitters
(and NO RECEIVERS, since most shortwave units also have 8.0-9.0MHz) up
1 MHz than it is to relocate the 40m band.

And I hear the pathetic wailing of the boaters: "But 8.0-8.9 is a
High-Seas band!"...no, not any more! That stuff's all obsolete! Most of
the Ocean going fleet is using sat gear now, and besides - there's a
whale-load of spectrum that the miserable, backward, Third World ships
can use - and actually we all know they're gonna operate wherever they
want to, because no one will actually DO ANYTHING about all the bootlegging
that the Third World morons do on every HF frequency!

Then the IARU and ITU need to work out similar AMATEUR EXCLUSIVE bands
that would include:

1.8-2.5, (The Americas dont have 2.0-2.5) etcetra on HF, including 7.0-7.5
220-235MHz (Most of the Europeans are denied this, America has only 222-225,
make it all the same and include the whole 15MHz!)

a 70MHz band for everyone. This is also do-able.

420-450, There is absolutly no !@#$%^&* reason to run land mobile in this
area!

Unless and until the ITU and IARU are willing to settle on a plan that
uniformly MAXIMIZES Amateur frequencies, I'm not willing to choke-back to
running the subset of frequencies the Europeans have been willing to settle
for! It's a crock! The business interests, especially broadcasting, are liars
and SWINE! They have a history of dirty dealings that dates back to the 1920's
with every move they've made in grabbing spectrum!

The other problem is what to do with those non-ITU signatories? How about
some UN-sanctions until they sign up??

(no? Why not?)

Message-ID: <2.2.16.19960603130142.25c77b6c@mail.earthlink.net>
Source record: 223924

If you are not a golfer and have received this message in error, please accept our apologies, and delete this message.

If you are a golfer, this will make you a better one, GUARANTEED! This is not a gimmicky club, audio tape, video tape, or book for your head. This is a nuts and bolts training system, designed to improve your game.

Have you ever seen a golf pro offer a money back guarantee if you don't improve. Well this system has such a guarantee. If you've taken a lesson, you know how expensive they are for an hour, and how little you actually accomplish in that hour. My system will work with you continuously throughout this year, the next year, and the next. You may never need another lesson. The system I have created is actually a workbook and game analysis program that will help you improve as long as you play golf. You will also learn how to track your game, so you can pin point the areas where you can improve the most in, and you will be surprised by what you find out.

Order now and you will not only improve your game, guaranteed, but you will automatically be entered into a drawing for a free Titanium Driver. (Your choice, Great Big Bertha, BubbleBurner, Yonex, Cobra, etc.)

This is a system I know you can use, and it has an ironclad money back guarantee. If you work through this system and do not improve, I will refund your money. You have nothing to lose except strokes off your game.

So the only question is do you really want to play better golf?

Order now to improve your game. Send check or money order for $29.95 to:

J4 Marketing
P.O. Box 148
Lake Bluff, IL. 60044-0148

(make payment to J4 Marketing. Due to demand, please allow 2-3 weeks for delivery.)

P.S. Do not treat this like another sales pitch. I know with certainty this is going to help you. If you were my best friend, I would tell you not to pass this up. As a matter of fact, my friends are using this system and improving daily. Someday you will thank me. ORDER NOW to be entered in the Titanium Driver give-away.

>take rocket scientist intellect to figure out what the "upgrade" is all about.

Yeah but do you think for ONE MINUTE they're gonna actually DO ANYTHING about this? Oh sure, they'll bust anyone they find bringing in those "EXPORT" radios but do you think they'd just flat tell UNIDEN: "Hey! NO MORE! Or we're gonna yank your permits and business license and put your CEO in jail!"

Not a fart's chance in a tornado!

And just who is it that UNIDEN is building those rigs for anyway? After all, the band from 28.0-29.7MHz is an Amateur Exclusive on a worldwide basis! So why is it that they build stuff like the "SuperStar" which covers 26-28.5 RIGHT OUT OF THE BOX? Or the "Pluto", with coverage from 26-32??

It's pretty obvious to me that UNIDEN isnt dealing in good faith! They KNOW that these radios are going to wind up in the hands of those filthy bootleggers!

In fact I'd bet $5 that were the links of distribution followed up, one might find that SOMEONE at UNIDEN is in on it! Its just all too ducky to be anything but "By Design"! The build these radios..."For Export"..uhuh...and a large percentage of them windup in the US...I wonder how that happens?

I called Gary Hendrickson at the FCC Laboratory, he was very informative and said that the FCC would be interested in "Any and all information about the sellers, importers, etc of these radios.." He also claimed that UNIDEN was "being cooperative"...(Im a little confused by that, and even Gary couldnt explain the rational for UNIDEN to be making radios that arent FCC/CEPT/etc approved ANYWHERE IN THE WORLD!) ..yeah right!

So if anyone else is interested in helping the FCC regarding this matter, Gary advised we contact:

Larry Brock
FCC
9330 LBJ Freeway
rm 1170

Dallas, Tx 75243-3429

Apparently Mr. Brock is coordinating the effort to dry-up the supply of these radios and will be only too glad to hear where the stuff is coming from or who is selling it!

>the 18-34v in, and output about 13-14v at whatever amps can be made available.
>Or if rewiring it for 12v is more appropriate, no problem.

Check out Linear Technology LT1070 and LT1074 Family.

The 1074 is designed for buck mode, but it has high forward drop. the
1070 (or 1270 for more current) has much lower drop when jerry rigged
into buck mode.

Digi-Key carries these parts. Make sure you use appropriate schottky
commutation diodes.

You should re-wire panels, UNLESS it is a long way from panel to load.

If you can get 90% on the switcher, you are doing well. You can save
some IR drop by running more voltage on connecting wires. If the wire
is long, it may make up for losses in the switcher.

1070 Family is _excellent_ choice for your 12-28V application. It's
native mode is boost configuration. Used a bunch of them, work great,
Read Carl Nelson's excellent application note (booklet!). Used one to
run CB off 4.8V Nicad pack....worked great, no hash problems.

>My fallback position is to use a linear regulator based on a 7812 and some
>pass transistors but we'd like to have something that makes use of the

2594. A short e-letter I sent to the various LEO satellite suspects

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDsG3Gq.G07@netcom.com>
Source record: 223935

This is a short letter I wrote up and sent to the various people in the LEO re-allocation thing:

Subject: Amateur radio and the LEO proposed reallocation
Dear Sirs: Please consider removing the amateur radio bands from the list of possible bands for re-allocation to the low earth orbit satellite. Amateurs provide volunteer emergency communications to help out in major disasters when they occur. They have invested thousands of personal dollars in their equipment, equipment that would be rendered ususable if a re-allocation happens. We wouldn't be able to "write it off" on our taxes and such, like big companies could. So, please do not damage an existing capability for disaster communications (emergency comm) that has cost the government almost nothing to be set up and in place.

Sincerely,
Robert Casey

sent it to:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.
Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

via e-mail.

I tried to be cordial and non-combative, just mentioning the public servide and emergency communications we do in disasters, and that re-allocation would damage this. And make useless equipment real people spent their real and limited money on.
I'm no English major, that's sure. So edit the above, or write a better letter and e-mail.

I have For Sale a 10-Meter SSB/CW Mobile Transceiver, Radio Shack Realistic,
Model HTX-100 which is a Top of the Line Product.

The unit is 2 years old but used only ONCE! Manual is included

Features:

RIT (Receiver Incremental Tuning) Control
10 Memory Channels
High or Low Output Power
RF Gain Control
CW and SSB Modes

Unit is compact and durable (so says the manual)!
Like I said, I used it only once.....

Price for the unit is $200

Will ship via UPS ground on receipt of check, money order or cash!

If interested, Please email: PWK2177@tesla.njit.edu

Thanx....
Phil

But the original point was that they would have to make the hardware different for each country. The way it stands now it's a programming issue. The amateur rigs imported to the US are FCC registered and are programmed to only operate (tx at least) in the amateur bands. What you suggesting here would be a changed in hardware - that would increase the cost of equipment.

Modification is usualy not difficult. I support the idea of having radios that are modifiable and would not support a type acceptance proposal. I have modified two radios to operate out of band without worrying about type acceptance. I would like keep it that way.

>>This is a good argument on paper but, followed to an extreme, my

>the bands are full of bootleggers?

In most areas she could have bought him a car without having a driver license either.

I really don't see the problem as being unlicensed persons buying radios with the intention of being bottlegers (those types of people are out there - but I don;t see it as a big problem). I think we should worry more about ignornant sales people in places that sell ham radios along with cordless phones and microwave ovens. These are the people that make bad sales suggestions or give customers bad infomation about the radios they sell.

Henry van Cleef (vancleef@netcom.com) wrote:

: You are assuming that a Usenet news group parallelling the existing
: "boatanchor" mail list is going to pick up a lot of traffic that is
: now on that list. I've never seen any ground swell of opinion on the
: list looking for a Usenet group. Indeed, most of the discussion of a
: Usenet group I've seen there has been "we don't want any Usenet group
: instead of this list." It would also appear to me that some large
: percentage of list people don't have access to Usenet. I base this on
: the steady flow of mail messages culled from rec.radio.swap reposted
: to the mail list, and the number of queries I have gotten asking how
: to "subscribe to" rec.antiques.radio+phono, followed by discussion of
: the fact that it is a Usenet news group and not mirrored to a mail
: list. I'll also note that when the boatanchor list became
: subscription only, about half the subscribers were dropped, and the
: increase in old amateur radio item discussion in
: rec.antiques.radio+phono was undetectable, if there was any.

I didn't realize that subscribers to the boatanchors list had to pay for the sharing of information. Seems to me the folks on the list would welcome a r.r.a.boatanchors newsgroup. Someone could cull the newsgroup for good discussions and repost just as they now import the r.r.swap articles of interest. Mirroring the newsgroup or list may overwhelm those who need it most, our friends who only have e-mail as a source of discussion.

Didn't Pat Towsend try to corner the market on telecom discussion only to find after a couple of newgroup votes that an unmoderated technical discussion news group could use the c.d.t. naming? This time it looks like it is the tail that is wagging the dog.

That design was used by Finco and several other TV antenna manufacturers, there is nothing new about it. It appears in old antenna articles from the 50's.

As a matter of fact, Finco used that design in an amateur six and two meter beam antenna that was popular in the sixtys.

It's easy to get a patent, it's tough to get one that "sticks".

> emotional. Tell them sharing is not in the public interest.

Why NOT share??? In fact why not try working WITH these people instead of AGAINST them??? Not that we would lose, but as I stated in MY letter, this idea of theirs has GREAT potential for HAM usage AS WELL AS commercial usage (of course the commercial use will have to take place somewhere either above or below the 2 meter & 440 bands, but IMHO, *I* feel it *can* be done).

Besides, isn't that why the PL Tone System was created???

Something to think about. Food for thought, perhaps....

73's for now my friends!!

I don't think Burt even cares about the "public service" side. He probably sees it the way most people do - An OBLIGATION!! And it's tragic because there a lot of people who get into this hobby just to communicate between husband and wife. Do you EVER hear ANY of THESE people checking into nets???

I don't!!! And when I do, it's probably just because they happen to have the radio on and they're mobile. Otherwise, they just pay their $20 just to have access to the club's autopatch. They don't want to be bothered with such things as volunteering to WORK the club hamfest in some way. Afterall, that's what the elected officers are for as they just don't have the time themselves...

I will now climb down from my soapbox.....

The best thing to do with the 2m Ringo Ranger is to throw it in the trash and put up a homemade 1/4 wave groundplane. You will get the same results from the 1/4 wave. Or better yet sell the Ringo to someone who don't know how bad they are.

Good luck

Big difference with 220. One of the main reasons it was taken was that
it was being underutilized. Of course, one of the reasons for the
utilization was YE OLDE FAHRTZ' refusal to allow a no-code license at the
time.
>
>
>As for hams using frequencies that are not allocated to amateur radio,
>that would be illegal and would be punishable by revokation of their

Sure. Just like the thousands of freebanders on 11-meters. The FCC has
shown the ability and/or desire to regulate that effectively, too...right?

> Personally, I'd rather gripe and
>complain and use my radios as paperweights than lose my licence
>forever.
>

Speak for yourself. I'm sure most of us feel a little more strongly
about having expensive equipment suddenly rendered worthless by an act of
the government. What GOOD is your license gonna be anyway if they

reallocate the frequencies and tell you that you can't use them anymore?

Please excuse this brief intrusion, but we are trying to locate any and all holders of academic degrees conferred within the last ten (10) years.

The Kitty Knight Corporation, Boston, MA, is currently searching for qualified individuals to participate in a ***PAID*** study focusing on post-secondary, graduate, and professional education in the United States.

Holders of ALL types of degrees in ALL fields of study are needed. We would like to hear from you as long as your degree was earned at an accredited institution in the United States.

After an initial screening, qualified participant will be asked to complete a questionaire of approx 150 questions. Everyone who completes the survey will receive a $100 stipend. Naturally, *ALL* information will be held in the strictest confidence.

To express interest, please send your name, mailing address, and photocopies of **ALL** degrees you have earned to: The Kitty Knight Corporation, Attn: Study 96-3H, Back Bay Annex, P O Box 546, Boston, MA 02117. (If not obvious from the degree, please indicate the field of study.)

Thank You Very Much!

Don't know the Tucker tuner, but my MFJ-948 had a bad coil. After some
months of operation at 100 Watts (it is rated at 300 Watts), the coil
overheated and two windings shorted. That caused more heat and stability
problems with the tuner - in the midst of some rare DX, of course :-(

I now use the MFJ-948 as a (expensive) antenna switch.

2620. HAMS BUST A POLICE JAMMER !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: narc@pacifier.com

Source record: 223971

This week in Seaside Oregon, where the SEAPAC ham convention was being held, A group of hams belonging to the PARG (Phantoms Amateur Radio Club) were down on the beachfront enjoying their yearly bonfire. One of the hams (kb7yzs MIKE) was monitoring the local Seaside Police Dpt. He heard someone cursing and yelling at people. At first he thought it was comming from his uhf side on his ht, but to his surprise it was comming from the vhf police side.
He promptly notified everyone at the fire to listen. After about 4 minutes of listning to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.
So 4 members in the group (kb7yzs, kb7yzr, n7xmd, and yes even aa7up) left the fire to search for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his ht and and speak into it. At the very same moment the voice on the police freq was saying " Hey, fat ass, ya you in the black pant and the white shirt" while he was saying this on the SPD frequency the memebers noticed a man wearing those cloathes, a little on the heavy side walking directly underneath them.
One of the members saw a patrol car in the area. He approached the officer and asked him if he was looking for a person causing interference. He seemed very upset and replied YES! We informed him we knew where it was comming from.
The other 3 memebers were on their way to the third floor when they saw the of the people running down the stairs and away from the shilo.

The officer took a report and spoke to the hotel manager. After 2 hours the jamming started up again. The SPD officer went directly to the room the PARG members pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. the aftermention is second hand knowledge from speaking to a friend of the officers and a friend of the suspect.

The man in question is from Central California up here for the ham convention. Aparently he was realesed from jail only a few days before this incident. The charge he was in for was malscious interference to the local police in his area. (REAL SMART GUY) . This obviously did not teach him his lesson. I understand the charge seaside brought againsted him was, interference of a police officer while performing his duties.

Signed, PARG BOARD of DIRECTORS

Dittos,

I think Wayne really is showing evidence of senile dementia now...

The cover story on 73 this month is abouth the 'scam' that NASA
pulled, faking the moon walks. Wayne has indisputable evidence.

Of course you can read all of the evidence in the book , written by
some idiot who won't reveal his last name. The only place you can buy
this book is from Wayne !

Or you can buy the authors only other book proving Einstein was all wrong.

(I'm not making this up.... Pretty pathetic isn't it ;))

Well, that's one reason right there to keep it. The radiolocation service, as I believe the Govt. has on the Uhf band we share, shouldn't have to relocate, now should it ? After all, that's where radio is located, and if we move it , we might never find it again.

All kidding aside, the real reason amateur bands are the apple of the public eye right now is that they're so well kept. Believe it or not, 2 meters cannot even be considered for any type of automatic services. Something to do with Band memory, and type acceptances, and that stuff. SO the most we could possibly be looking at is 440-450. Or 430-440, in actuality, because the bulk of the satellite spectrum is already on there. Someone mentioned that SS was going to be the preferred mode of LEO operation, and the presence of SS on the 430-440 bands might be an improvement, since SS is known to have a cleansing effect. FM carrier transmissions on the other hand, could be relegated to space in the 33M band, IMHO, because that's basically where all the other garbage is spewed up. ISM, the other vehicle locator mobile services, computer hash, and the like. That's one of the wonderful recent acquisitions we amatuers have had the good fortune to happen upon, back in the 80's, with all the real difficulties. Write the FCC, and beg them to give away the 902-928 mhz spectrum to LEO. They really deserve each other.

At the risk of being redundant, does anyone know if the list for these freqs include 33cm, and if they do, write your congressman, and tell him that that would be a great band for LEO, and alothough we'll shed some tears, we'll be better off in the long run. In fact, no reason to move SSTV, if they're willing to not interfere with, and accept interference from LEO equipment. We picked up this band back in like, 1986, I believe, when all the trouble started. We would be more than happy to shed it. I personally, believe that SATAN lives in that segment of the band, so if the feds want it back, they can have it. Tell me it's on the list for consideration. 73.

I have the short two page manual for this if you need. I think it is
a good little antenna.

If you already have the manual:
If I remeber correctly, all I did was keep measuring swr until it was
at a minimum in the middle of the band. Any swr meter will work, all
you are looking for is a minimum not an exact measurement. Keep
sliding the little bar on the ring until it is at a minimum and then
screw it down tight enough to keep it from moving.

I wonder why a tuner using the same basic components obtained from the same vendors has better quality?

With a low Z and/or capacitive load, or QRO, NEITHER VCI's "clone" or the original MFJ tuner are any good.

The best tuners under those conditions are L networks (sometimes incorrectly called Pi's or other incorrect names), but they have the poorest matching range on low bands!

All tuners have limitations. It's virtually impossible to market (let alone design) a tuner that works in every circumstance. The best design I can think of is a T for the low bands with lots of capacitance that switched to a pi configuration for the upper bands, or a link coupled tuner with oodles of coil taps.

2631. Digest of Articles - QST Apr 96 (Long - 40k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4ouif1$1ak@news1.infinet.com>
Source record: 223982
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the April, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Solar Power for Your Ham Station - It's Easier than
You Think
Author>Casler, David C. - KE0OG
Source>QST Apr 96, pp. 33-37
Abstract>Describes a solar energy system that supplies all power for a
100-watt amateur station. It uses 33 solar cells and a 12-volt, 220

ampere-hour storage battery.

Digest>KE0OG describes the solar energy power system that supplies all of the power used by his ham station. His is not a QRP station; he operates a Yaesu FT-747 HF rig that transmits a 100-watt output. Nevertheless, it obtains all of the power necessary from a small array of 33 solar cells that produces a total of about 2-amps maximum, in full sunlight during cold weather (less in warm weather).

The output current of the solar panel is collected in a nominal 12-volt storage battery. On a cloudless day in summer, the panel produces a 1.5-amp charging current from about 9:00 a.m. to 5:00 p.m., or about 12-amp-hours per day. The shortened days produce charging current for only about 5-hours in winter, but at higher current, so that the total charge is about 10-amp-hours. At the author's location in Boulder, CO, he gets the equivalent of three or four cloud-free days per week all year long, so he charges some 36- to 48-amp-hours per week.

Operating on 12-volt power, his FT-747 draws up to 19-amps when transmitting at full power, but only about 1-amp during receiving. He operates all modes from CW to digital, and averages about 8-hours operating time per week. With that level of activity, he finds that the single solar panel is usually sufficient to keep his battery fully charged.

The system includes a 220-amp-hour tractor battery, which the author feels is "overkill" for his use, but he obtained it, reconditioned, for a good price. The solar panel is a Model 32-W ARCO unit. He does not use a charge controller; only a diode to block reverse-current flow when the sun goes down. In his situation, the battery is so large compared to the maximum charge rate that the solar panel never produces more than a trickle charge and does not require a controller to reduce the rate as it approaches full charge. Larger systems, with higher current capability, would benefit from sophisticated charge controllers that would not only improve the power efficiency, but also extend the productive hours of sunlight.

The article contains much useful information about solar power systems of all types, and for various uses, in addition to radio.

Title>TA2:Microprocessor-Controlled Repeater Voting System - the RVS-8
Author>Kincaid, Dwayne L. - WB8OYG
Source>QST Apr 96, pp. 38-43
Abstract>A repeater that uses remote satellite receivers to cover a large area requires a system that will switch input to the one that is showing the best signal-to-noise level. This describes such a system.

Digest>The kind of voting system that this article discusses is the type used in repeater systems that cover a large area through the use of remote satellite receivers, located remote from the main repeater site

and connected with it by UHF or telephone links. When such a repeater is accessed by a remote caller, the controller must instantly determine which receiver is getting the best signal-to-noise ratio and switch to it for input. The article describes such a system that can handle up to eight receivers. It uses a microprocessor with a signal/noise measuring circuit based on audio noise. It can be interfaced to virtually any repeater.

In operation, the unit continuously monitors the signal received from each of the receivers connected and evaluates the signal-to-noise ratio 100-times per second. It responds sufficiently quickly to avoid loss caused by signal dropout as, for example, when mobile transmitters are driven behind buildings. To avoid rapid switching between channels for which the signal/noise ratios are almost equal, an adjustable amount of hysteresis is programmed in. This means that, while one receiver is selected and before access will be switched to a different one, a substantial improvement must be detected. The hysteresis can be set in 1-dB. steps from 0- up to 20-dB., but values between about 5- and 10-dB. are most commonly used.

A complete schematic diagram and full parts list, as well as full circuit descriptions, are included in the article. Source code for programming the CPU is in file: RVS8.src available on the Internet by ftp from oak.oakland.edu, in directory: \pub\hamradio\arrl; or on the ARRL BBS at (860) 594-0306. It can also be obtained on a floppy disk from LDG Electronics, 1445 Parran Road, St. Leonard, MD 20685 for no charge if the requester sends a self-addressed envelope with two first-class stamps and a postpaid disk mailer with a 3.5-inch blank disk. LDG will also supply a complete kit of parts including a pre-programmed CPU, less only power supply, enclosure, and hardware, for $187 including shipment in North America. Orders from outside of the USA, Canada or Mexico must add $20 for postage.

Title>TA3:Mathcad 6.0 - A Tool for the Amateur Experimenter
Author>Sabin, William E. - W0IYH
Source>QST Apr 96, pp. 44-47
Abstract>Describes a computer program that will analyze, and optimize, the parameters of electronic circuits. It is being offered to ARRL members at a discounted price.

Digest>Mathcad 6.0 is a computer program designed for use on IBM-compatible personal computers. It is a commercial product, manufactured by MatSoft, Inc. and designed to make mathematical analyses of electronic circuits.

The article illustrates how useful the program can be by showing two circuit design problems that are typical of amateur projects. The first is a lumped-LC impedance transformer to match a smaller load resistance to a source having larger output impedance consisting of resistance and capacitance.

To begin the calculation, the user assigns values to certain of the parameters: frequency, load resistance, output resistance and output capacitance. From that setup, the program calculates the remaining values. Seeing the results, the user can modify the assigned values in any desired way until the calculations produce the desired results.

The second example is a narrow-band audio filter using two operational amplifiers connected in a Q-multiplier circuit. In this case, the program not only calculates all of the operating parameters; it also plots the filter response curve over a range of frequencies specified by the user.

From these simple examples, readers can evaluate the potential utility of the system. The manufacturer is offering Mathcad to ARRL members, along with an associated program, for $115 plus shipping and handling, which is a discount of 50-percent from list price. Anyone who is interested in purchase should call MathSoft at (800) 628-4223. Ask for Charles Camiel at extension 716.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:Yaesu FT-1000MP MF/HF Transceiver
Author>Lindquist, Rick - KX4V and Swanson, Glenn - KB1GW
Source>QST Apr 96, pp. 68-73
Abstract>Review of Yaesu's latest top HF transceiver. It features two receivers, both crystal and DSP i.f. filtering, and many other features. Some test measurements are the best of any receiver ever tested by ARRL.

Digest> The Yaesu FT-1000MP offers all of the features of a top-line amateur transceiver plus a number of features that are unique. Whereas it seems that all manufacturers of amateur radio gear try to add more and more features into their latest product offerings, Yaesu with this new model has arguably gone farther than any other manufacturer, until now. It contains not one receiver, but two; not either crystal or mechanical or DSP i.f. filters, but all three; not one r.f. preamplifier, but three; and not one noise blanker, but two. In fact, the number of features and options that the rig provides requires the front panel to display more than 90 knobs and buttons. Some reviewers criticized the design, at least initially, as containing "too many toys".

In spite of the similarity of names, the FT-1000MP is not just an update, but an entirely new design, quite different from the older FT-1000. Like the latest models from ICOM and Kenwood, it contains a sophisticated Digital Signal Processor (DSP) system in a low-frequency i.f. (10.24-KHz.) Also like its competitors, the DSP filters are outside the AGC loop; consequently, the noise reduction and filter performance of the built-in DSP is as good as, but not much better than, that available from external DSP systems currently on the market.

Unlike one of their competitors, however, Yaesu does not make the ridiculous claim that the DSP obviates the need for crystal filters. In fact, Yaesu uses crystal filters early in the i.f. chain, including optional narrow band units optimized for CW and SSB, plus a Collins mechanical filter in the third i.f.

The two receivers are characterized as the "main-" and the "sub-" receivers. The main one contains both the standard and optional i.f. filters as well as the DSP system. The sub-receiver offers many, but not all, of the features of the main one: it does not use a DSP system nor the range of optional crystal filters. It can, however, be equipped with a 500-Hz. bandwidth Collins mechanical filter for CW.

There is clear evidence that Yaesu design engineers pay close attention to the wishes of their ham customers. Providing two complete receivers is one manifestation of that. One reviewer called the two independent receivers the "ultimate secret weapon in any pileup". They also can be used with separate antennas in a dual-diversity mode. Additonal evidence of the designer's concerns for amateurs' needs is the attention that they have paid to the rejection of second-order intermodulation distortion (IMD). ARRL laboratory tests show FT-1000MP IMD-rejection figures that are the highest yet measured among amateur transceivers. Yaesu designers obviously took to heart the information that was presented by Dr. Ulrich Rohde - DJ2LR/KA2WEU in his 1994 QST articles titled: "Key Components of Modern Receiver Design".

Other data obtained during ARRL Laboratory tests show that the receivers and the transmitter in the FT-1000MP meet or exceed the published specifications, and are at the leading edge of current commercial amateur transceivers.

The manufacturer's list price of the FT-1000MP is $3599. Optional narrow-band i.f. filters, both crystal and Collins mechanical types, are priced at either $179 or $189, each. Other optional accessories are available, including a desk mike, a temperature-compensated crystal oscillator, a digital-memory recorder, and a remote keypad.

Title>PR2:MFJ-8621 Packet-Only Radio
Author>Ford, Steve - WB8IMY
Source>QST Apr 96, pp. 73-74
Abstract>Review of an inexpensive 2-meter transceiver for use only in packet operation. It is easy to use and performs well on either 1200- or 9600-baud packet.

Digest>The MFJ-8621 is a complete 2-Meter FM transceiver for use in transmitting and receiving 2-Meter packet on a single frequency, only. Both the receive and transmit frequencies are crystal controlled, and the crystals must be obtained for the specific frequency desired.

The package is tiny, only about 5- x 5-inches, (13- x 13-cm.) and less than 2-inches (5-cm.) high. The only control on the front panel is the

ON/OFF switch.

The unit is equipped for either 1200- or 9600-baud operation. The transmitter output is 5-watts, which is adequate for accessing a local node. Used with a gain antenna mounted high and in the clear, it is probably also adequate to reach fairly distant nodes.

The MFJ-8621 does not contain a receive-audio squelch circuit. Therefore, the user's TNC must contain a data-carrier detector (DCD).

In summary, the reviewer found the MFJ-8621 to be an ideal performer for monitoring a packet cluster more than 10-miles away with "several granite ridges in between", not a line-of-sight path. The manufacturer's list price is $119.95. A wall-adapter power supply adds $39.95 and a connector cable is available at $14.95. Custom crystals, installed, are $24.95.

Title>TC1:The Case for Wide-Shift RTTY
Author>Beezley, Brian - K6STI
Source>QST Apr 96, pp. 78-79
Abstract>Narrow (170-Hz.) frequency shift is best for most amateur use, but when a band is nearly empty, and fading is severe, changing to wide (850-Hz.) shift may give better performance.

Digest>This letter cites the fact that, although many years ago amateur RTTY (as well as other digital modes) was changed from the old 850-Hz. shift to the narrow-band, 170-Hz. that is now standard, most commercial RTTY still uses 850-Hz. shift. Amateurs made the change in the 1950s to avoid problems caused by selective fading, so the author analyzed why commercial operators do not find that to be a problem.

He concluded that the reason is probably not only that commercial equipment has very efficient automatic threshold correction (ATC); he realized, also, that the combination of ATC with wide shift provides a kind of automatic frequency-diversity reception that is highly insensitive to selective fading. This is because ATC causes the demodulator to subtract the amplitude of the space-channel wave from that of the mark-channel, thus forming a composite signal. In the worst case, for example when the mark-signal disappears completely, the ATC causes the demodulator to use only the space-channel signal for data flow. Since that channel is separated relatively far from the other, nearly full diversity effects should prevail.

Because of the current crowding in the amateur bands, the author does not suggest that hams revert completely to the old wide-shift standard. He does suggest, however, that when one is operating on a nearly empty band and encounters deep fading, they might try wide shift.

Title>TC2:Measuring a Meter's Internal Resistance
Author>Pagel, Paul - N1FB
Source>QST Apr 96, p. 79
Abstract>Describes a third way of measuring the internal resistance of a meter movement.

Digest>In QST Jan 96, K8TM described two ways to measure the internal resistance of an analog meter movement. This letter describes a third way.

Connect the meter in series with a variable resistor across a voltage source and adjust the resistor so that the meter indicates full scale. Then place a second variable resistor across the meter, itself, and adjust it until the reading is half-scale. In that condition, the second variable resistor is set to a value exactly equal to the internal resistance of the meter. One can then remove the resistor and measure its value with an ohmmeter.

Title>TC3:Welding Reinforcing Bar
Author>Fusler, Allan - KI7NF
Source>QST Apr 96, p. 79
Abstract>Explains why concrete reinforcing bar cages should not be welded.

Digest>In Technical Correspondence, QST Jan 96, KI7NF described the construction of a reinforcing-bar (rebar) cage to be used to reinforce the concrete base of a tower. He advised that the cage not be welded, but rather be wired together with flexible wire. Many have questioned why the bars should not be welded, and this letter contains the answer.

Rebars are made from scrap steel and vary substantially in carbon content. If the amount of carbon is too high, it is not possible to make high-strength welds. Even if the carbon is low enough to allow welding, it may require preheating to a known temperature and use of special welding rods. It is unlikely that amateurs will have available the necessary equipment for preheating, measuring the temperature, and welding the bars, so welding should be avoided.

LAB NOTES (LN)

Title>LN1:Different Grounds for Different Shacks
Author>Tracy, Mike - KC1SX
Source>QST Apr 96, pp. 80-81
Abstract>Electronic equipment should be securely grounded for safety against shock from internal faults, transients, and lightning.

Digest>This article is in the form of questions and answers. The subject matter is ground connections in a ham shack.

Strictly speaking, grounds are not necessary for radio operation. A transceiver connected to a balanced antenna, such as a dipole, will perform perfectly well without grounding. But grounds are required for safety and the National Electrical Code (NEC) requires buildings' electrical wiring to be correctly attached to a secure ground connection. A copy of the code can be obtained from: National Fire Protection Association, P.O. Box 9101, Quincy, MA 02269-9101. Their World Wide Web site is: http://www.wpi.edu/~fpe/nfpa.html.

Grounds enhance safety against three classes of potential damage: that caused by electrical faults in wiring and appliances inside the building; that caused by lightning or dangerous transients originating outside the building; and destructive interference to the functioning of communications, computers, and other types of electronic equipment.

The NEC contains detailed specifications concerning how building wiring must, and must not, be grounded. For lightning protection, all antennas should be directly grounded through heavy copper conductors, preferably strip material having appreciable width, run as straight as possible to ground stakes with no sharp bends in the conductor.

R.f. grounds often require extensive experimentation to find the best coombination to avoid RFI.

The ARRL publishes a great deal of information about grounds for eliminating of RFI, as well as for lightning safety. A comprehensive summary is contained in the book: RADIO FREQUENCY INTERFERENCE, HOW TO FIND IT AND FIX IT (ARRL order No. 3754)

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:LF/MF/HF/VHF Return-Loss Bridge
Author>Lau, Zack - KH6CP/1
Source>QST Apr 96, p. 76
Abstract>Describes simple return-loss bridge that can be used to measure SWR in an antenna feedline, and for other purposes.

Digest>KH6CP, ARRL Laboratory Senior Engineer, has built three versions of a simple return-loss bridge using seven quarter-watt carbon-film resistors, three disk ceramic capacitors, and a diode in each unit. The three differ only in the size of the package and the type of connectors used. All are usable from 0.1- to 148-MHz.

A measurement of return loss is precisely convertible to a standing wave ratio (SWR). In use, a source of r.f. energy, limited to 0.5-watts maximum, is connected to the input jack; the antenna, or other r.f. load, to the output jack. The circuit provides a d.c. voltage between

0.0- and 1.0-volts proportional to the return loss. It can be measured by any voltmeter across the "Meter" terminals. All recent editions of the ARRL Handbook contain a table of return-loss vs. SWR values.

Title>HK2:A Minimum-Parts ATU
Author>Baird, Bob - W7CSD
Source>QST Apr 96, pp. 76-77
Abstract>Construction information for an antenna tuner made of a coil and a variable capacitor mounted on a wooden board, small enough to be carried in a back-pack.

Digest>In this letter, W7CSD illustrates, by a schematic diagram and a photograph, a simple antenna tuner that he carries with him on camping trips. It is made of a single coil and variable capacitor, both mounted on a small wooden board. A short jumper wire is attached to each end of the coil; the loose end of each jumper carries an alligator clip. They are used to short out numbers of turns on both ends of the coil, varying with the band in use. The 50-ohm input from the transmitter is attached to one end of the coil; the antenna to the other end. The capacitor connects between a center tap on the coil and ground.

The article gives detailed tuning instructions.

Title>HK3:A Quick and Easy Tower Bracket for Wire Antennas
Author>Edwards, A. W. - K5CN
Source>QST Apr 96, p. 77
Abstract>Describes a steel bar notched so that it fits securely into a Rohn 25 tower section and can be used to support a wire antenna or a small beam.

Digest>This Hint describes a simple steel bar that fits over the horizontal members that connect the three legs of a Rohn 25 tower section. When fastened in place, it protrudes about two feet from the tower and can be used to support the center of an inverted Vee wire antenna, or even a complete UHF/VHF beam.

The bracket is made from a single 36-inch (0.9-meter) length of 2- x 3/16-inch (51- x 4.8-mm.) mild-steel bar stock. For a secure fit on the tower, the author cut two slots in the bar by drilling two 3/8-inch (10-mm.) holes for the ends of the slots and cutting each side of the slot with a hacksaw. A dimensioned drawing illustrates the cuts and also the way the finished bracket fits on the tower.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Apr 96, pp. 55-56
Abstract>An "April Fool" technical spoof, in Question and Answer form.

Digest>Many years ago, QST ran an "April Fool" article in every April issue. They were technical spoofs, invariably signed: "Larson E. Rapp". Since the term: "larceny rap" is rarely heard today, there may be many readers who do not recognize the allusion.

This issue of "The Doctor is IN" is that kind of a spoof, but written in the Question and Answer format of the "Doctor..." article that appears monthly in the New Ham Companion.

Title>NHC2:Test Your Knowledge!
Author>Silver, H. Ward - N0AX
Source>QST Apr 96, p. 57
Abstract>This item is a questionnaire, giving answers that are printed upside down, for readers to test their knowledge of radio. It is not amenable to digesting.

Title>NHC3:The Road Less Traveled
Author>Ford, Steve - WB8IMY
Source>QST Apr 96, pp. 58-61
Abstract>, Use the slower, 1200-baud Oscars 16 and 19 when 9600-baud Oscars 22, 23, and 25 get too crowded. This describes a relatively low-cost station that will do so.

Digest>The PACSAT amateur satellites, Oscars 22, 23 and 25, have become the most popular because they operate at 9600-baud. In many areas of the world, they are so popular that it is difficult, at times, to access them. The older and slower Oscars 16 and 19 operate at only 1200-baud, but are not nearly so crowded. Hence, WB8IMY, QST's managing editor, assembled a relatively low-cost station using mainly second-hand equipment to operate them.

By visiting hamfests, he was able to find an old 2-meter HT with 1-watt output and a power amplifier to boost the signal and form the uplink necessary. For his receiver, he bought a Uniden 10-meter transceiver that was being sold cheaply because of the current poor propagation conditions on that band. To it, he added a Hamtronics converter that converted the 70-cm. signal to the 10-meter band and, for good measure, bought a used UHF-receive preamp to make a really hot receiver. His most expensive purchase was a PacCom packet TNC that includes a phase-shift-keying (PSK) modem as part of the package. Since he already had a personal computer more than adequate for the job, he then had all the equipment necessary for his packet station.

For antennas, he used a 70-centimeter "Eggbeater" that he had evaluated for a QST Product Review, and formed a "highly-sophisticated" 2-meter groundplane out of bent coathanger wire. For operating software, he obtained a registered copy of WISP from AMSAT, Box 27, Washington, DC 20044. This is a WINDOWS program that does everything necessary for packet operations with the satellites.

With the station equipment assembled and the antennas in place in the attic of his house, his computer (via WISP) notified him that OSCAR 16 was about to pass overhead. Soon, everything being transmitted from the satellite was being printed on his monitor.

After watching the screen for a few minutes, he gave the command to attempt an access and, in a very short time, he saw that he was connected. The WISP then requested a download of the Directory, showing everything on the satellite that was available for downloading, and it was received before the bird had finished its pass overhead.

The PACSATs contain a large number of files of all kinds, including operating software, reports and other information on many subjects, snapshots and other images, as well as personal messages. They are used by hams all over the world.

Title>NHC4:Electric Fence Interference - A Case History
Author>Hare, Ed - KA1CV
Source>QST Apr 96, pp. 62-64
Abstract>How the author helped a ham find the source, and cure, RFI caused by an electric fence.

Digest>Ed Hare, who heads the ARRL Laboratory, makes an amusing story out of trouble-shooting RFI caused by an electric fence. Such a fence is usually a single strand of aluminum wire charged to a high voltage by a power supply with very high internal impedance. Any animal (including humans!) that touches it will get a shock that is somewhat painful, but not dangerous.

The essence of the story is that the power supply, otherwise known as the "Controller", is usually not the source of rf noise. It commonly comes from arcing caused by faulty electrical joints or splices in the wire. Any arc that occurs anywhere along the length of wire causes an oscillatory current to flow, and the long wire is an excellent antenna to broadcast it over a considerable distance.

Using a portable AM radio as a sensor the author, accompanied by friends, walked the full length of the fence and found several places where noise seemed to originate. In each case, there was a splice that was not tightly wrapped and they could actually hear the sound of the spark as well as see it when they looked closely. Making good connections solved the noise problems in every case.

Title>NHC5:Let's Just Listen for a Change
Author>Teale, John - N7FKV
Source>QST Apr 96, pp. 65-67
Abstract>"Shortwave" broadcasts make interesting listening. Here are a few stations to try.

Digest>This article reminds readers that news, music and special features of all kinds are still being broadcast on the "shortwave" bands. The quality of programming is, in many cases, superior to

domestic commercial television and radio. News programs, in particular, are often more thorough and more authoritative than those available from local broadcasters and, at least, give another point of view.

The article contains a list of a few of the most prominent and long-established shortwave broadcasters, as follows:

Frequency (KHz) Source
5950 Voice of Free China
5960 Radio Japan and Radio Canada, Intl.
5965 British Broadcasting Company (BBC)
5975 BBC - Antigua
6020 Radio Nederland
6040 Voice of Germany (Deutsche Welle)
7325 BBC
9435 Voice of Israel
9580 Radio Australia
9720 Voice of Russia
9740 BBC
9775 Voice of America
9820 Radio Habana (Cuba)
11775 BBC
11820 Radio Habana (Cuba)
12050 Voice of Russia

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Kermadec, ZL8 - Now or Never!
Author>Fletcher, Barry P. - ZS1FJ
Source>QST Apr 96, pp. 28-30
Abstract>Describes a DXpedition to an isolated Pacific island.

Digest>This is the story of another DXpedition to an isolated Pacific Island. Kermadec is administered by New Zealand and is located about 650-miles (1050-km.) north-northeast of that country's North Island.

Unlike many such stories, the author did not face life-threatening hazards in reaching the island or getting ashore with his equipment. The "hazard" that he had to overcome was an administrative one. The island is a wild-life refuge and noone, other than New Zealand Department of Conservation personnel, is allowed to visit. Mr. Fletcher was so eager to provide one more country for DX-hounds that he underwrote the cost of an expedition by a scientist wanting to write a book about the birds on the island. Since the scientist was welcomed by the authorities, the author and his wife were able to get permission to go along!

Once they were on the island, they found the resident naturalists to be very friendly and hospitable. They allowed him to establish his hamshack in a room in their meteorological building. He operated his

station for eight days and made 6000 contacts in 93 different countries.

Title>GI2:Zero to Technician in Two One-Day Sessions
Author>Lamb, C. Mike - N7ML
Source>QST Apr 96, pp. 31-32
Abstract>How one radio club conducts very popular training sessions for prospective hams.

Digest>In January, 1994, the Gallatin Ham Radio Club of Bozeman, MT, conducted a 1-day class in amateur radio, followed one week later by a short review session and a license examination for Novice- and Technician-Class licenses. In order to be sure that all participants took the class seriously, they charged a $25 registration fee, which included a videotape syllabus as well as the examination fee.

The primary course material used in teaching was the ARRL Technician Class Video Course. Thirty-four students commenced the class; thirty-two of them returned the following week for the review and examination. ALL passed the Novice written exam and twenty-eight of them (87.5-percent) passed the exam for either the Technician or Technician Plus licenses!

Encouraged by their success, the club conducted two more such classes during 1994. A total of 61 students got licenses. Two years later, at least 33 of the 61 are active on the air; three have upgraded to Tech Plus, three to General Class, one to Advanced, and one to Extra. In addition to the ones known, 15 have moved away and it is highly likely that at least some of them are also still active.

From their experiences, the club has found that a one-day intensive class appeals far more to people than does the typical program of one- or two-hour sessions that lasts for many weeks. Before their first class, the total ham population in the county was about 180. With the first class, alone, they were able to increase that figure by 15-percent.

Title>GI3:Amateur Radio in Morocco
Author>Pataki, George - WB2AQC
Source>QST Apr 96, pp. 48-49
Abstract>A visitor meets many hams in Morocco.

Digest>Mr. Pataki paid an extended visit to Morocco and met many hams there. He found them to be very hospitable and, in fact, they even invited him to stay at the Headquarters of the Royal Association of Radio Amateurs of Morocco (ARRAM) while he was in the capital of Rabat. The major part of the article is made up of photographs of many of the hams that he met.

Title>GI4:Hams on Bikes
Author>Paul, Bil - KD6JUI

Source>QST Apr 96, p. 50
Abstract>The story of a biking tour on the Pacific Crest Bicycle Trail.

Digest>Nine people, aged 30 through 65, including 6 hams, toured the Pacific Crest Bicycle Trail in July, 1995. All the hams carried HTs and three also carried QRP HF rigs. They camped out at night and the three with HF rigs successfully worked CW during the night. They even worked some DX (Japan, et al.) This is the story of the tour.

Title>GI5:The 811A - Grandfather of the Zero-Bias Revolution
Author>Badger, George - W6TC
Source>QST Apr 96, pp. 51-53
Abstract>Describes the early history of zero-bias (high-mu) triodes, especially the RCA 811.

Digest>Two of the most popular tubes used in modern amateur linear amplifiers are the 811A and the 3-500Z. Both are high-mu triodes, otherwise known as zero-bias triodes. The 811 is a venerable design, but it is not quite correct to call it "The Grandfather". The Taylor TZ-40 was also a zero-bias triode and very popular among hams before 1939, when RCA first introduced the 811.

A zero-bias triode power tube has the great advantage of simplicity and low cost when compared to the alternatives: low-mu triodes or beam tetrodes, because it needs neither screen-grid nor grid-bias power supplies. However, those advantages are not nearly as important, today, as they were 50-years ago because modern power supplies can be built cheaply. In the 1930s, any power supply required tube-type rectifiers with their own filament transformers, iron-core chokes, and relatively expensive capacitors, in addition to the high-voltage transformer.

This article gives a detailed history of the development of the 811 before, during, and immediately after World War 2.

I suggest that if you think calling a boatanchor an Antique is an
insult, you need to rethink things. By definition a boatanchor is a piece
of junk, while an Antique is a valuable piece of equipment.

>We are all waiting for the new group process to begin,
Sigh.. the new group process begins with convincing people that the
proposed name is the best one possible

>while you stand outside casting stones.
What you are failing to understand is that several people are trying to
help. We honestly think that the proposed name is only useful to a part of
the Ham community. Right now I can't recall a single foreign Ham (in this
discussion) who understood the term. While I certainly don't believe that
it needs to be perfectly clear outside the r.r.amateur hierarchy, it
should be clear to the majority inside.
Trust me, I've been in the same place, having to modify the newsgroup
name we wanted, to one that was acceptable to those outside the nitch.

2639. Digest of Articles - QST May 96 (Long - 40k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-03 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4oure6$44d@news1.infinet.com>
Source record: 223990
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the May, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A High-Performance AGC/IF Subsystem
Author>Carver, Bill - K6OLG
Source>QST May 96, pp. 39-44
Abstract>Construction details for a high-performance i.f. system. It features two AGC loops, high sensitivity and low IMD, resulting in excellent performance.

Digest>This article describes a high-performance i.f. system, including innovative AGC, to be used in conjunction with a front end covering any desired frequency range. It features a sensitivity level (minimum discernable signal strength) of 0.03-microvolts. In-band intermodulation distortion (IMD) is down 40-dB. for S-9 plus 70-dB. interfering signals. Constant-gain interval of the "hang" AGC is variable from 0.1- to 2.0-seconds, controlled by a panel-mounted knob. The i.f. frequency can be either 4.434-MHz., with the use of European color-burst crystals in the filter, or 9.0-MHz.

The AGC system uses not one, but two AGC loops. The reason for this is that, if only one AGC loop were used when receiving weak signals, wide-band noise would desensitize the system. But if a narrow filter is placed between the controlled stages and the AGC detector, its time delay would destabilize the system. The use of two detectors makes it possible to use an unfiltered AGC detector, with rapid response, to control the gain of stages ahead of the filter, and a second one, with slow response, to control the post-filter stages.

All gain-controlled stages are parts of Analog Devices' AD600 dual-IC chips. These amplifiers provide a control voltage vs. gain curve that is almost precisely linear in dB. Consequently, the S-meter is perfectly linear over a total range of about 130-dB.

The article contains a complete schematic diagram, parts list, and a relatively complete description of circuit operations and adjustment procedures. No complete kit of parts is available for this project, but a PC-board can be obtained from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for $19.50, including domestic shipping. A template package, that also contains some assembly instructions, is available from the ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a price of $2.00 for ARRL members, or $4.00 for non-members. To order, identify the item as the "Carver IF/AGC Circuit Template".

Title>TA2:New Life for Dentron MLA2500s
Author>Daughters, George T. - AB6YL
Source>QST May 96, pp. 45-48
Abstract>Instructions for upgrading an old amplifier. A single tetrode is substituted for the dual triodes, thereby improving performance as well as greatly saving tube cost.

Digest>The Dentron MLA2500 was a relatively inexpensive amplifier, quite popular among hams. The circuit used a pair of Eimac 8875 triodes, but its performance had some limitations, so the units were much modified.

Now, a pair of replacement tubes is priced at $800, so the amplifiers are often available at hamfests, without tubes, for very low prices. AB6YL rebuilt one to use a single Svetlana 4CX800A tetrode to replace the two triodes. The tetrode can be bought, new, for $180!

In rebuilding the rig, the author made several changes, including those required by the switch from triodes to a tetrode, plus others meant to improve performance. Among the changes required are: changing the filament supply from 6.3-volts at 6-amps to 12.6-volts at 3.6-amps; modifying the warmup delay controller to provide 2.5-minutes of full heater power before any other voltages are supplied; substituting the proper tube socket; reinstalling the cooling fan, which requires sheet metal and Teflon baffles and ductwork; installing a 350-volt regulated screen power supply and 180-volt bias and ALC supply; modifying one of the panel meters to monitor screen current; and changing the amplifier input circuit from cathode drive to passive grid drive.

Passive grid drive means that there is no grid current drawn; the driving power from the exciter is all dissipated in a 50-ohm non-inductive resistor. Since significant grid current would cause distortion and splatter, an op-amp circuit was added to light an LED warning light whenever more than 1- or 2-milliamps of grid current flows.

The author acknowledges that this project includes a long list of modifications, but states that none is difficult. A package of information is available from the ARRL Technical Secretary for $5.00 to ARRL members, or $7.50 for non-members. It includes the author's expanded comments, ARRL lab test data, and several photos of the amplifier, as modified. The same information can be downloaded, free, from the ARRL "Hiram" BBS, (860) 594-0306; by ftp from oak.oakland.edu in the directory: pub/hamradio/arrl/qst-binary in file: MLA2500B.zip.

Title>TA3:Computer Control for Ramsey's FX-146 and FX-440 Transceivers
Author>Kowalsksy, Richard - N7RAY and Jamieson, Mike - KB7QCQ
Source>QST May 96, pp. 49-52
Abstract>Upgrading a kit transceiver to add sophisticated features, including memories, tone encoding, scanning, and other capabilities.

Digest>N7RAY and KB7QCQ, with a small group of friends, like to experiment with VHF/UHF equipment. One of their projects was to build a sophisticated VHF transceiver by starting with a Ramsey FX-146 kit bare-bones transceiver and modifying it to add computer control, memory channels, CTCSS and DTMF encoding, memory scanning, and other features. This article describes the final result and gives construction details for duplicating it.

Their design approach was to add a microprocessor controller, with some associated circuitry, to take control of most aspects of the transceiver's operation. Using an Intel '80C51H, they built their electronic assembly on a small PC-board that fits on top of the Ramsey circuitry inside the cabinet. They call the assembly the "FX-Extender".

The original transceiver provided twelve preset frequency channels, each of which was selected by an array of diodes soldered onto the main circuit board. For the FX-Extender to control the frequency, it was only necessary to substitute a multi-pin connector for one of the diode arrays and let the microprocessor provide the pattern of open- and closed-circuits to the pins in the same manner as the diodes. The microprocessor also has a serial port; using it makes it easy to interface directly to a remote computer so that the operator can actuate control directly from the keyboard, or call up control routines from the computer memory (e.g. scanning a predetermined list of frequencies).

The FX-Extender PC-board contains only three ICs, four transistors, two crystals, and a handful of passive components. The control software that was developed as part of the project was written in the Visual Basic language so that the authors could include a WINDOWS-style display with icons, and other familiar operating conveniences. The controls are easy to use by anyone who has used a WINDOWS-based computer.

Information about the Ramsey FX-146 was published in a Product Review in QST Oct 93. A partial kit for building the FX-Extender can be obtained from: Akula Technologies, Inc., 18518 52nd Ave. NW, Stanwood, WA 98292, including PC-board, ICs, crystals, a programmed microprocessor, and software for $83, including shipping in the USA. The bare PC-board can be bought for $4.00, plus shipping and handling, from FAR Circuits Inc., 18N640 Field Ct., Dundee, IL 60118-9269.

PRODUCT REVIEW (PR)

Asst. Technical Editor

Title>PR1:QST Compares: Tiny 2-Meter Hand-Held Transceiver
Author>Swanson, Glenn - KB1GW
Source>QST May 96, pp. 66-73
Abstract>Reviews of seven ultra-small 2-meter transceivers.

Digest>In this article, the ARRL Headquarters staff reviewed seven tiny 2-meter HTs of the current generation. The largest of these is only 6-inches (15-cm.) high; the smallest fits easily into a shirt pocket without even the top showing!

The models reviewed are: Alinco DJ-191, ICOM IC-T22A, Kenwood TH-22AT, Standard C-108A, Standard C-178A, Yaesu FT-10R/A16, and Yaesu FT-11R. All share many common features: they transmit only on the 2-meter amateur band and receive over a broader frequency range, typically 130- to 174-MHz. The single exception is the Standard C-178A that, in addition to the 2-meter coverage, receives the 70-cm. band and also transmits a 50-milliwatt output on that band.

All receive and transmit amateur FM; three also receive AM to cover the aviation band. They are: Standard C-108A, Standard C-178A, and Yaesu FT-11R. The ICOM IC-T22A can be modified to do the same.

All, except the Alinco DJ-191 and Kenwood TH-22AT, can be programmed to scan preset frequencies. All except the tiny Standard C-108A have standard battery capacities of the order of 600- to 700-mAh, can be operated from 12-volt power at higher output, and contain DTMF autodial memories. All provide a CTCSS encoder, and all except the C-108A provide also a CTCSS decoder.

Alinco DJ-191
The reviewers called this the most user-friendly radio of all. It is also the least expensive. It is the largest of the group and provides the largest LCD display window and keypad. Its typical street price is $220.

ICOM IC-T22A
This rig is about 5-inches (12.7-cm.) high and provides the most number of features. The typical selling price is $236.

Kenwood TH-22AT
This one is about 4.5-inches (11.4-cm.) high. The reviewers praised it for the smooth operation of its controls. They criticized its small display window as "difficult to read". Its street price is $265.

Standard C-108A
The tiniest of the group, this rig is only slightly over 3-inches (7.6-cm.) high. It uses two AA-size batteries and provides power output of slightly less than 1/3-watt. It weighs only 5-ounces and sells for about $225.

Standard C-178A
This unit is under 5-inches (12.7-cm.) high and receives on both the 2-meter and 70-cm. bands. It transmits on 2-meters with the same power output ratings typical of the group, and also transmits on 70-cm. with output limited to 50-milliwatts. It is the most expensive of the lot, selling for an average of about $395.

Yaesu FT-10R
This rig is slightly over 4-inches (10.2-cm.) high. It offers a variety of keypads and numbers of memories; the reviewed model came with a "A-16" keypad with 30-memories, but others offer up to 99-memories and one also includes a digital voice recorder module. Its display window was rated only "fair" for readability. Programming the radio from the keypad was more difficult than with other models, but with an optional cable and software, it can be easily programmed through a personal computer. Its average price is $250.

Yaesu FT-11R
This unit was among the most popular. It is just under 5-inches (12.7-cm.) high and contains the most memories: 150. Its display is legible under all lighting conditions. Its street price is $308.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Improved Feed for the Off-Center-Fed Dipole
Author>Formato, Richard A. - K1POO
Source>QST May 96, p. 76
Abstract>Describes a modification to the antenna described by G0FAH in QST Feb 96, to eliminate the need for changes to the balun when switching bands.

Digest>In QST Feb 96, G0FAH's article: "Four Bands, Off Center", described an off-center-fed dipole that would operate on 40-, 20-, 25-, and 10-meters without an antenna tuner. However, it must be fed with 300-ohm ladder line cut to an odd number of half-wavelengths on the 15-meter band, and also requires a 4:1 balun on 40-, 20-, and 10-meters, but a 1:1 balun on 15-meters.

In this letter, K1POO describes a similar antenna design he developed that will operate on the same four bands without requiring any changes between bands. He achieves this performance by changing the feedpoint, using any desired length of 50-ohm coax, and a 4:1 balun at the feedpoint. The dimensions of the antenna wire are the same as those described by G0FAH: 21.03-meters (69-feet) long, No. 12 wire (2.05-mm. diameter), but the feed is made at a point 3.65-meters from one end. The author's computer calculation shows the SWR to be 2.0, 1.7. 1.9, and 2.4 on 40-, 20-, 15-, and 10-meters, respectively. However, that calculation does not consider feedline losses. When losses are included, it is likely that the SWR will be below 2.0 on all four bands.

In actual practice, environmental factors will require slight modifications to be made to the dimensions for optimum performance. As is usually the case, trimming the dimensions with the antenna in place is probably the best way to optimize performance.

Title>TC2:Surplus Wattmeters for Amateur HF/VHF/UHF Use
Author>Whiting, R. Alfred - K3BRS
Source>QST May 96, p. 77
Abstract>Describes the URM-120 stand-alone wattmeters that are often available in U.S. government surplus. They are comparable to Bird meters, and are sometimes available at very attractive prices.

Digest>Many amateurs use stand-alone wattmeters manufactured by Bird, but they are very expensive. K3BRS points out that the U.S. Government bought large numbers of similar wattmeters that are now being sold on the surplus market and are identified as: TS-1285/URM-120. Like the Bird meters, they use plug-in capsules to change the frequency range. Typical capsules cover 2- to 30-, 25- to 250-, and 200- to 1000-MHz. Each capsule has a pointer knob on the top that can be turned to select wattage ranges, typically 50-, 100-, 500-, and 1000-watts.

The meters are highly damped, so the response speed is so slow that it is difficult to use them for tuning transmitters. A kit is available

from Hy-Res Communications, Inc. to make a modification so that the meter will read peak power. For information, contact Hy-Res via E-mail at: KF8AT@detroit.ampr.org.

It is reported that URM-120s are being sold at hamfests for prices between $20 and $40, including all three plug-ins. However, ham surplus houses are listing them at prices from $200 to $350, so potential buyers may have to shop a good number of hamfests to try to find a "bargain".

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:More Ways to Stop Walking Telegraph Keys
Author>Easler, John E. - KC5DSN and Vosicky, Ed - W0JT
Source>QST May 96, p. 74
Abstract>Two hints of how to prevent keying paddles and "bugs" from sliding around when they are used.

Digest>CW operators using bugs and/or paddles face the problem that the key tends to slide around (or "walk") on the operating desk during use. KC5DSN suggests using a type of adhesive called "Handi-tak". It can be bought at the stationery department of WalMart stores for about one dollar.

It comes in the form of strips that can be rolled into cylinders. He suggests standing such a cylinder on each foot of the key base, then "squishing" it down on the working surface. He reports that the key will stay in place, but can be easily removed.

The second part of the hint comes from W0JT. He suggests using a piece of nonslip rug pad, available from any carpet store. He "guarantees" that it will solve the "walking" problem.

Title>HK2:More on 28-V Coaxial Relays
Author>D'Anneo, Paul - K6UZK
Source>QST May 96, p. 74
Abstract>Warns that the capacitor-discharge current in the circuit described by WD5FFH in QST Dec 95 to operate coax relays may be so high as to burn switch contacts. Reduce it by using a series resistor.

Digest>In H & K, QST Dec 95, WD5FFH described how to use a charging capacitor to store the peak voltage to "pull in" a 28-volt relay, after which the 12-volt steady supply will be adequate to hold the relay in place. In this hint, K6UZK points out that the instantaneous charging current into the capacitor may be very high, enough to burn the contacts of the operating switch unless a resistor is used in series with the capacitor. He suggests a value between 10- and 100-ohms would be appropriate.

Title>HK3:How to Reach and Clean the IC-720A Rotary Relay
Author>Shongut, Richard - W2QFR
Source>QST May 96, p. 74
Abstract>Rotary switches in the IC-720A often need repair after long use. This describes how to get access to the component.

Digest>The ICOM IC-720A is a popular rig that uses a 3-gang rotary switch driven by a rotary solenoid stepping switch. Apparently many users encounter trouble with that component after years of use. This letter, and also one by K8KWD in H & K, QST Nov 95, address these problems. This letter contains detailed instructions of how to remove the covers and unplug components to reach the rotary switch.

It involves removing the top cover; unplugging the speaker cable; removing the bottom cover; removing the r.f. amplifier box; unplugging two multi-contact plugs and a cable so as to be able to get the r.f. section shielding box out of the chassis; and, finally, prying off the bottom cover of the r.f. section to expose the switch assembly.

The author advises spraying the contacts of all three switch wafers with contact cleaner/lubricant, which should solve any problems of intermittent operation of those contacts.

Title>HK4:A Cure for Sticky Mike Switches
Author>McCune, Ralph - KE6DJB
Source>QST May 96, p. 74
Abstract>Some mikes contain push-buttons that have a piece of sponge-rubber to return them to open position, after actuation. Old age may cause the rubber to fail; the cure is to replace the rubber.

Title>HK5:Ramsey FX-146 Hints
Author>Sabutis, Joseph L. - NW0A
Source>QST May 96, p. 75
Abstract>How to add an attenuator to the antenna input to the receiver to eliminate severe IMD on strong signals.

Digest>NW0A built a Ramsey FX-146 2-Meter FM transceiver to use in packet mode. The radio showed severe intermodulation distortion (IMD), when receiving strong signals. It was not eliminated even after he installed a modification to narrow the receiver's front end bandwidth. To solve the problem, he placed a switchable attenuator in the front end.

The attenuator is made of three resistors in a "Pi" configuration that is switched into and out of the circuit by a double-pole, double-throw switch. (Closing the switch substitutes a jumper for the attenuator). It is placed near the antenna r.f. connector, connected between capacitor C25 and the junction of diode D2, resistor R21, and capacitor C47.

The Pi resistor ciruit is formed by a series resistor (which the author calls RR2) and two shunt resistors that lead from each end of RR2 to

ground; they are called RR1 and RR3. The resistor values can be selected from a table, accompanying the letter, to provide attenuation from 3- to 18-dB, always preserving a 50-ohm input and output resistance. The table is as follows:
Attenuation (dB.) RR1, RR3 (ohms) RR2
3 292 17.6
6 150 37.3
9 105 61.6
12 83 93.2
15 71.6 136.1
18 64.4 195.4

To decide how much attenuation to use, he suggests temporarily inserting a step-attenuator into the circuit and trying it at various dB. settings until one is found that reduces the distortion to an acceptable level. Then the resistors can be selected from the table.

He further notes that the adjustment of FM deviation is very critical for packet use. Performance is satisfactory only over a narrow range of settings. To find the proper adjustment, operate the rig with a dummy load and listen with a second receiver while the transmitter is generating the packet signal. Adjust the deviation until the "brrraaappp" sounds similar to those of other signals on the band.

Title>HK6:Another Way to Install Ground Rods
Author>Goins, Michael - WB5YJX
Source>QST May 96, p. 75
Abstract>How to use water to make it easier to sink a ground rod.

Digest>This hint suggests that sinking an 8-foot ground rod into the soil is easy if one first digs a small diameter hole about 12-inches (30-cm.) deep and fills it with water. After waiting a short time for the water partially to soak into the ground, jam the rod down as far it can easily be pushed, then pull it up to allow the water to flow into the newly-formed cavity. Repeat this again and again. The procedure will allow one to sink the rod to any desired depth with relatively little effort, even in heavy clay.

FEEDBACK (FB)

Title>FB1:"An In-Room 80-Meter Transmitting Multiturn Loop Antenna", QST Feb 96
Author>Tracy, Mike - KC1SX
Source>QST May 96, p. 48
Abstract>Regarding the capacitor C1, the text should indicate that the stator plates should be connected to the upper end of L1. In Fig. 1, the words "Stator" and "Rotor" should be transposed.

Title>FB2:H & K, QST Feb 96
Author>Erikson, Wally - WB0LPB
Source>QST May 96, p. 48
Abstract>In Fig. 3, the PC-board on the left side should be labeled: "IF unit in rear half of case".

Title>FB3:"Cure for the 'Missing Dot Problem'...", QST Nov 95
Author>Bruce - AA6KX
Source>QST May 96, p. 48
Abstract>In Fig. 3, each pin of the 4N35 optoisolator that was labeled "6" should be labeled "4".

Title>FB4:"JVFAX APT Adaptor", QST Mar 96
Author>Zehr, Grant - AA9LC
Source>QST May 96, p. 52
Abstract>Note 6 indicated that the BayCom Team would provide support for the JVFAX. Instead, inquiries sent to their address will be forwarded to Dieter Dipple - DF4RD; E-mail: dipple.rrze.uni-erlangen.de.

Title>FB5:"Measuring a Meter's Internal Resistance", Technical Correspondence, QST Apr 96
Author>Pagel, Paul - N1FB
Source>QST May 96, p. 75
Abstract>The true author of the subject letter is W. J. Stanley - KT4HF.

Title>FB6:Product Review: "ICOM IC706", QST Mar 96
Author>Pagel, Paul - N1FB
Source>QST May 96, p. 75
Abstract>It is not correct that the IC-706 is capable of cross-band split operation.

Title>FB7:"Build the Rotator Pal", QST Feb 96
Author>Pagel, Paul - N1FB
Source>QST May 96, p. 75
Abstract>Several parameters should be changed from the values shown in the original item.

Digest>In Fig. 1, R36 should be a 150k-ohm resistor. The bottom end of C26 should be connected to U31D, pin 11, not V-minus. Author K1KP recommends adding a 1500-ohm resistor from the cathode of D33 to Pad F. This will ensure that the brake will release when the rotator is run against the CW stop and the switch is activated to drive it CCW. Additional information is available from Tony Brock-Fisher, K1KP, 15 Webster Street, Andover, MA 01810, E-mail: fisher@an.hp.com.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST May 96, pp. 55-56
Abstract>Questions and Answers on subjects of interest primarily to newcomers.

Digest>Questions discussed in this issue include: modifying a Heathkit DX-60B to make it a QRP rig; interference from an HF transmitter to TVRO receiver; audible "subaudible" CTCSS tones; higher noise pickup from vertical antennas; weather effects on HF skip; quads vs. Yagis; antenna gain on transmit vs. receive; autopatches; rain effects on SWR; and other subjects.

Title>NHC2:Explore Ham Radio's Software Bonanza
Author>Kleinschmidt, Kirk - NT0Z
Source>QST May 96, pp. 57-60
Abstract>Explains the various sources of operating software. Also gives brief reviews of a number of popular programs.

Digest>A great deal of software is available for hams to use on their PCs. Programs are classified in four different categories: commercialware, shareware, freeware, and public-domain software.

Commercialware is designed to be sold as consumer products. Typically, they are well-designed, thoroughly debugged, packaged in attractive ways, widely advertised, and sold to the public. Their prices are relatively high and the producers likely protect vigorously against unauthorized copying.

Shareware is software designed to be sold at a profit and copyrighted; but it is sold on a kind of "honor" basis. The producer distributes copies free and asks users to try it for a period of time, typically 30-days. At the end of the period, those who like it and intend to continue using it are asked to pay a "registration fee". In return, the buyer often is sent a printed manual, perhaps enhancements to the program, and given a promise of free future updates.

Freeware is like shareware, with no registration fee. Consumers are welcomed to use the software for non-commercial purposes, but are not allowed to sell copies, or otherwise profit from its use.

Public-domain software is that which has been written and offered for free use by everyone. Often it is comprised of relatively short programs and published in magazines.

The article gives very brief reviews of a wide variety of programs of interest to hams. Included are programs for: routine logging; callsign and QSL manager databases; contest logging; contest training; Morse code learning; satellite tracking; exam preparation; engineering and antenna design; propagation prediction.

Title>NHC3:CQ from KF5WT, Air Mobile
Author>Alderman, James G. - KF5WT
Source>QST May 96, pp. 61-62
Abstract>Describes the fun of operating VHF from the air, while flying in a private plane.

Digest>KF5WT has a friend who pilots a private plane. On a number of occasions, the friend has invited him to fly along and operate radio with his 2-meter HT, enroute. He reports that he has made more than 150 contacts and, often, produces mini-pileups as soon as it becomes known on the band that an air-mobile station is on the air.

Title>NHC4:How to Buy Military Surplus
Author>Blahun, George, Jr. - KS1U
Source>QST May 96, pp. 63-65
Abstract>How to find, and participate, in U.S. Government sales of surplus equipment. Many types of sophisticated electronic equipment are sometimes available at very low prices.

Digest>Mr. Blahun calls the present: "the best time since the end of World War 2 to buy military surplus." The US military is downsizing and shutting down facilities all over the world. All kinds of equipment is being declared excess and made ready for disposal. In many cases, government surplus can be a bonanza for those who take the trouble to pursue the offers.

Every military base or installation either has an office responsible for disposal of surplus, or else works through such an office at another base, usually nearby. The formal name for such office is the Defense Reutilization and Marketing Office (DRMO), or Defense Property Disposal Office (DPDO).

Anyone wanting to investigate what is available should make a list of military bases within driving range. The Reference Department of public libraries can usually help find them. Place calls to one or more and ask for the DRMO. Remember that you will be dealing with a bureaucracy; don't lose patience but be polite and persistent. As a member of the public, citizen or not, you have the right to obtain the information you seek!

After reaching the DRMO, ask to receive written notification of the next surplus sale and, if available, a list of the items being sold. Some weeks before the sale, you will receive a notice of the location, dates and times for inspection, and other information. Be sure to inspect the material carefully before bidding on anything and understand the necessary procedures that must be followed to pay for and carry away the items bought.

When visiting a base, one will almost certainly be required to produce a valid driver's license, car registration, and an insurance card. Property to be sold is usually on pallets and sold in single pallet lots. It is likely that you will find an item, that you want badly,

palleted with many other items of little interest. This is the reason that great amounts of exotic equipment, with hardly an imaginable use to hams, is often found in hamfest flea markets!

GENERAL INTEREST ARTICLES (GI)

Title>GI1:From Scrap to Glory
Author>Gummer, Mark - N2IQU
Source>QST May 96, pp. 28-29
Abstract>A moonbounce enthusiast obtains a 48-foot (14.6-m.) dish from a government installation and erects it at his home station.

Digest>N2IQU is an ardent EME (moonbounce) enthusiast. Since the 1980s, he has progressed, step by step, to larger and more elaborate antennas. His first was a six-Yagi array on 432-MHz. Then he adapted an old TVRO dish antenna to 1296-MHz. It worked so well that he went on to build an 18-foot (5.5-m.) diameter dish for 1296-MHz., which satisfied him only until he heard about a 28.5-foot (8.7-m.) diameter dish for sale in Canada. With it, in 1994 he reached a score of almost 1,000,000 points, clinching fourth place, in the EME contest. His "ultimate challenge" arose in May, 1995, when he learned that a 48-foot (14.6-m.) diameter dish was being abandoned by the US government and offered free to anyone who would carry it away. It had been completely disassembled and was lying in pieces.

Mr. Gummer could not resist the temptation, so he made the necessary arrangements and took possession. In ways that he does not describe, he transported it to his home in Baldwinsville, NY.

The antenna had been in use for many years and all parts of it were covered with multiple layers of paint, much of which had chipped. Rust was showing in many spots. He sandblasted all painted members down to bare metal, then repainted them white.

For a pedestal to support the dish, he built a support tower using four 35-foot long (10.7-m.) steel tubular columns that he had "been saving"! He designed and built an azimuth/elevation rotator using parts taken from an old Gradall ditch digger. A concrete base containing 22-cubic-yards (16.8-cubic m.) of concrete, weighing 77,000-pounds (35,000-kg.), was poured; after it had cured, a 27-ton crane (lifting capacity: 12,200-kg.) lifted the support tower into place after the concrete had cured.

After a total of about 6-months' work, the completed antenna was in place and put into operation. Using it, N2IQU is now very active on 144-, 432-, and 1296-MHz. moonbounce. Since the gain is "outrageous", he is able to have successful QSOs with modest earth-based stations. He has worked many hams having nothing more than a single Yagi and 150-watts output.

Title>GI2:Ill Winds Blow
Author>Herman, Jerry - N3BDW and Palm, Rick - K1CE
Source>QST May 96, pp. 30-35
Abstract>The year 1995 was the 20th Century's worst for Atlantic storms and hams provided emergency communications during and after all of them. This relates the stories of some of them.

Digest>The year 1995 was the worst year for Atlantic hurricanes in the 20th Century, and the second worst in all recorded history. There were eight tropical storms and eleven hurricanes recorded. Five hurricanes reached Category 3, or higher, indicating severe damage. In every case when a storm or hurricane came ashore, radio hams were active in providing communications, in some cases providing the only communications available. This article contains many summary stories and photographs of the various storms, including hurricanes Opal, Luis, Marilyn, and Erin.

Title>GI3:Hamming in the Kyrgyz Republic
Author>McDaniel, Drew O. - W8MHV
Source>QST May 96, pp. 53-54
Abstract>Operating QRP in Bishkek, capital of the Kyrgyz Republic.

Digest>The Kyrgyz Republic is one of the smallest of the 15 that formerly made up the Soviet Union. It is in Central Asia, in the mountains on the north side of the Himalayas, between them and the steppes of Central Asia. Mr. McDaniel is a consultant and worked for 6-weeks in the capital city of Bishkek during July and August, 1995.

Wanting to operate ham radio while there, he applied for permission. Although the licensing authorities were almost totally at a loss over how to issue an amateur license to a foreign visitor, he was able to convince them that, since they are now an independent nation, they will be faced with the necessity of doing so frequently in the future. So, within 48-hours, they issued him a license to operate as: EX/W8MHV.

His living quarters were comfortable, as he rented an apartment from a university professor. The radio equipment that the author carried with him was only a tiny QRP rig. He dangled a 20-meter dipole from a bamboo pole out the window of his apartment, which was in a multistory concrete building, and operated almost exclusively CW during his stay. Even with his extremely limited station facilities, he was able to make many contacts throughout the former USSR and, during evening hours, with European and East Asian stations.

I brought the S.E. Asia problem to thier attention in the letter I
sent them Richard. Amateur LEO's don't work over S.E. Asia,
so I don't imagine commercial ones would either. Good part is
that if they do take the bands away, we can always sell our old
VHF gear to the cab drivers in HK.

-----BEGIN PGP SIGNED MESSAGE-----

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.gonix.com/pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers

Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send

E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites (view the Elmers list as
hypertext; in addition, the home site at gonix.com has many new
features, including keyword searching and registration and
feedback forms; the site marked with an asterisk also offers WAIS
index searching by keyword for all Usenet FAQ's):

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being
promptly updated in particular - the sites at Ohio State and Smart
Pages are no longer recommended for accessing a current copy of
the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

No longer available from:

* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* http://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Well, it's finally happened. The long-defunct FAQ's have finally been removed from most archive sites. This important document, one which served as an excellent "Read Me First" for the readership of the amateur radio-related Usenet newsgroups, is now no longer publicly available.

Efforts are still underway to bring it back, but so far, no volunteers have stepped forward that have been able to resume its regular posting and maintenance.

As stated many times before, new editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby, so the editorial review group is intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

AUTHOR, SWISSLOG HAM RADIO LOG PROGRAM

http://www.worldcom.ch/business/swisslog/swisslog.htm

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

tony@toners.com

Prescott, AZ

* Novice training, local VE for Novice-Tech tests
* General questions

I also operate a 24-hour landline BBS for Ham and General Interest:

+1 520 445-8472

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds.stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service

their own equipment. I would like to see a turn-around here...

- ---

For hams that are interested and live in my area, they are welcome to login to IBBS. IBBS is a full-time Unix-based computer that is dedicated to ham radio. I carry a full rec.radio.* news feed and E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be willing to answer any question a new person to the hobby has. If I don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

"Why don't you just make 10 louder?"
(Spinal Tap)
- --

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Frank E. van Vliet PA3FAQ

I have been active in amateur and commercial radio for the last 26 years I have worked on AM, FM, CW, and SSB sets from longwave through 12 GHz. I have also built TV stations for UHF and the 2.5 GHz ITFS band.

I am particularly interested in finding others to learn from my experiences. I am available by net or in person.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address

above. If you administer a ham-related Web site, QCWA would appreciate
a Link from your page. We're 12,000-strong -- worldwide -- and
growing! Come join us!

Bob Wier

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing

lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please

indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing
list maintenance. You may address membership requests to
martha@amsat.org, or send them by mail, phone, or fax to AMSAT
headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

+
+ HIGH-PERFORMANCE SOFTWARE MODEM PROJECT

+
+ Recently I've been working on a prototype SQPSK (staggered quadrature
+ phase shift keyed) modem for the amateur satellite channel. This modem
+ is implemented totally in software running on a PC with an ordinary
+ (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
+ transceiver bandwidth.
+
+ I've made good progress and have put some info up on my web page about
+ it, including an audio file to show what it sounds like in noise when
+ the signal is still copyable, available from:
+
+ http://www.qualcomm.com/people/pkarn/ham.html
+
+ Watch that page for an announcement of when I actually release the
+ code, which I plan to integrate into KA9Q NOS.
+
+ [Editor's Note: I'm honored by the presence of many advanced-level
+ Elmers in this directory, including Jeffrey Angus, Gary Coffman, and
+ now Phil Karn. Phil has graciously agreed to appear in this directory
+ for the purpose of elmering and technical exchange for the advanced
+ topics listed above. As with all of my Elmers, please respect their
+ time by only seeking assistance from them for the topics under which
+ they are listed. There are many Elmers willing to answer more
+ beginning-level packet radio questions, including basic questions
+ about IBM PC hardware, TCP/IP and NOS. Consult the "PACKET AND DIGITAL
+ NETWORKING" category in the Subject Quick-Search Index for a complete
+ list.]

*** 2332,2372 ****
* Digital Signal Processing software (DSP)
* DX and contesting programs

- - If you are interested in using UUCP to connect to the BBS, this can
- - also be done as I support Anon-uucp. The login to the system is
- - 'uucpanon', and there is NO password. The listing of available
- - archives are stored in a file called 'FILES', and it is located in the
- - /var/spool/uucppublic. To retrieve the files listing just use the
- - following command:
- -
- - uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
- - -or-
- - uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
- - -or-
- - uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)
- -
- - This will move a copy of my file listing into your uucppublic
- - directory.
- -
- - If you want to access the BBS via Telnet, all you have to do is
- - access:
- -
- - telnet://bbs.abs.net/
- -
- - and login is 'bbs' with no password required.
- -
- - To use anonymous FTP, just access:
- -
- - ftp://ftp.abs.net/
- -
- - and login as 'anonymous' (may not be necessary, depending on your FTP
- - client).

My only thought on this. Does the government have a loophole in such
legislation? 2 meters may not be as threatened as, say, 70cm. Why?
Amateur is not the "primary" service between 420 and 450. If hams got
the boot from this UHF band, would the government say they don't have to
replace it since it was never really ours to begin with?

Some of the channels were alloted for shared use between Gov't and
non-Gov't. I can't speak for the non-Gov't side but DOT is using 5
channel pairs for Intelligent Transportation Systems and USPS is using 5
channel pairs. According to the American Mobile Telecommunications
Association $63 million has been invested to date in system planning and
construction, but that plans for auction participation and system
construction would be severely hampered if the FCC changes the
non-contiguous channel allocations for non-nationwide 220 MHz frequencies.

>Im not sure what's going on with the government, but if this is a
>representative section of people who work for US we've got a problem!

So what else is new? We have had these problems for years! Politicians
will lie and tell you anything just to get into office. Once they do, nothing
counts anymore. Do you really think that they have our best interests at
heart? No way man! They are there to scratch the backs of those that
got them there in the first place. Money talks and BS walks! Keeping
2 meters and 440 for amateur use will make some money for the companies
that sell radios, but allocating them for use by the already over-sized
telecommunications industry will mean more bucks in the pockets of
the big-business leaders who got the politicians elected to do just that!

We elected these liars into office but, like the proverbial man who sits
on a tack and complains about it, we continue to tolerate these bozos
year after year. Wake up America! Any politician who does not fulfill
their campaign promises, or who obviously does not have the people's
best interests at heart should be "booted out" in the next election.

Forget this Conservative vs. Liberal BS that we hear every day! Lets get
people elected who will do the job, regardless of what party they represent!

>cease producing all such 2m gear. Also, there's more than "minor changes"
>that would have to be performed to 2M radios in order to sell them to
>the commercial folks on VHF-Hi.

Don't forget that somebody has to make the satelite gear for the "Little LEOs".
How do you know that Yaesu, Icom, Kenwood and Standard have not
already been approached with a "Go with our plan and you will make more
money than amateur gear" sales-pitch?! Even worse, "Let us buy you out
or we will force you out of business!".

Remember: Money talks and BS walks. They don't care about emergency
services as long as they don't need it. Mony is what feeds these Bums,
not common sense.

I would like to know what these Bums will do with all of their money if they
were hit by a natural disaster and were on the brink of dying unless
an important message can be relayed by radio? Maybe they can page
for help through the Little LEOs!!

73 from Steve

>articles of interest.
[snip]

Yeah, can you believe it? Small wonder that half the subscribers dropped out after the fee was levied. To me, it was a matter of principle, not $$$, as I already support three repeaters, two clubs, eight QRP societies, ARRL and QCWA.

In all fairness, those who paid the $12 and have posted about the list here seem to be as happy as the proverbial pig in slop. This is not a reflection on the quality of this fine list, but rather a reflection of what that group wants: a forum with a high S/N ratio. Of course, the same thing could have been accomplished with a moderated newsgroup, but I hate to see moderation, in most cases.

73 de Jim - KF6CR

2653. Re: Problem with tale name of "boatanchors"?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-04 00:00:00 UTC
From: mc@shore.net
Message-ID: <4p1o3r$29r@northshore.shore.net>
Source record: 223804
Cross-posted to: news.groups,rec.radio.amateur.misc

I've been reading these posts about the name of this proposed newsgroup for about a month now and come to the conclusion that its high time for the Request For Discussion about the newsgroup itself.

The name in my opinion should be rec.radio.amateur.boatanchors. Enough people know what a boatanchor is and those who don't will learn fast enough if they have an interest in older equipment. I have read various posts implying that this newsgroup will exclude non-hams and other folks. This is pure nonsense! Some of the most significant and informative postings on the Boatanchors-List coe from people who do not have (or admit to having) an ham radio license. It simply isn't an issue!

Let's get off this tired thread and onto new matters, ie: the RFD and the the CFV!

Michael Crestohl, KH6KD/W1

Cross-posted to: rec.ham-radio,rec.radio.amateur.misc

The Philadelphia/DC Aids Ride is in need of ham operators for June 21-23, with some registration tasks on June 20 as well. If you or someone you know would be interested in volunteering, please call the ride office at 202-293-7433 (ask for Tina) or email me back at kj6lv@cais.com.

Thanks!

On the tower where my repeater lived until this past weekend, there was a
5-channel ACSSB trunked repeater system. I don't know how much use it gets,
though; it covers a city of about 65K people (Galveston, TX).

From: w8jitom@aol.com
Message-ID: <4p1orj$22d@newsbf02.news.aol.com>
Source record: 223809

Let's all be perfectly clear about this. NONE of the tuners produced today are properly rated. The reason is simple, and contrary to what has been stated Dentron was a major contributor--not the pillar of honest ratings. How do I know? I have done consulting work for many of the manufacturers and personally know the people that wrote advertisements, and that included the owner of Dentron. I have pressured several manufacturers and advertising departments on this issue, all to no avail.

The power rating system used for tuners today stems from years ago when transmitters were rated by dc input power. For example, the SB-220 and L4B were designed (and this is first hand knowlege) as 1000 watt dc input CW amplifiers (500-600 watts RF carrier output). These amplifiers were called 2 KW amplifiers, because on voice peaks the dc plate input could reach 2000 watts (the actual design PEP output was 1000-1200 watts peak).

Tuners still follow that "system". Even though amplifier ratings changed, tuners never changed with them. A 2000 watt tuner is typically designed to operate with about 600 watts of RF carrier throughput under ideal conditions.

Dentron, makers of some of the least efficient amplifiers, moved the rating up a few notches. Some of their amplifier ran 3000 watts PEP input and delivered 600-700 watts CW output. Because of that, and just to keep things in perspective, everyone else increased their ratings.

The final result is true RF power handling of almost any tuner is about 1/3 to 1/2 of the "advertised or name value". But it keeps getting worse. Let me give a few more examples.

The Vectronics 3 kW tuner uses the same troublesome roller that MFJ recently abandoned, and SMALLER capacitor plate spacing. It handles even less power uner the same load conditions. Of course you could buy a patented $1000 tuner with NO warranty that uses the same roller size as these tuners (but on a higher melting temperature ceramic form) and doesn't even have the case properly grounded. That one will squeak by at 1500 watts with a high Z load, except you get no balun or balanced output.

In my opinion, everyone should DEMAND tuners be rated by the true RF power capability under a given set of conditions, and not some nebulious system that means absolutely nothing.

The power rating system used by ALL tuner manufacturers today means absolutely nothing, it simply indicates the capacitor size. Many amateur equipment ratings (I'm still upset about the useless weight control and the character shortening on QSK CW in my IC 706) are almost worthless. The problem is bigger than one manufacturer, and it will continue to grow.

The truth is, if someone made a good tuner and advertised it truthfully, no one would buy it. It would look like too little for the money.

==========

2. FLARES AND SHORT-WAVE FADEOUTS - NONE
2.1 Comments on Solar Activity.
Very low to low solar activity was observed throughout the month.

The monthly sunspot number for May was 5.6, one of the lowest
yet in the decline of this solar cycle. Early in the month there
were quite a number of regions visible on the sun giving prospect
of a relatively high sunspot number. However, the month closed
with a long interval with the sun being without sunspots.

A feature of solar activity this month was the appearance of
four reverse polarity spots - an indicator of the coming of
Cycle 23. These were short-lived and did not contribute greatly
to the monthly sunspot number

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

No significant disturbances observed.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
2 May 96: spread F observed during local night hours
17-19 May 96: spread F observed local night
28 May 96: spread F observed during local night hours
Hobart was depressed 20% during local day, very strong
sporadic E layer observed throughout local night hours
25 May 96: spread F observed local night
29 May 96: spread F observed during local night for southern region

No significant depressions observed this month. Degraded HF
conditions may have been experienced during local night hours.

>sideband exciters and modulators.

Thanks for the info. I was just curious if there was some parallel in that regard, between creation of your newsgroup and the proposed boatanchors newsgroup.

In the ensuing, unofficial discussion of the proposed rec.radio.amateur.boatanchors newsgroup, someone inferred that inclusion under the rec.radio.amateur.* hierarchy would exclude non-hams. While I'm not the proponent, I don't feel that there was any intent to exclude any interested party from participating.

I suppose that we could debate the naming of a newsgroup to the extent that Biblical scholars debate the Bible, and we still wouldn't come up with a perfect name, under all conditions. Case in point is rec.radio.swap. A lot of hams unknowingly post wanted/for-sale ads in the rec.radio.amateur.* hierarchy because they look for a .swap group in that hierarchy and find none. There was a fairly heated debate on this topic a few months ago. One argument for rec.radio.swap is that it is a forum for anyone, ham or not, to buy/sell/trade/seek any type of radio equipment, not just ham gear. I'd like to see a new group created, rec.radio.amateur.swap or something similar, with a charter broad enough to encompass anything that hams like to buy or sell, including test equipment and other related items. There didn't seem to be that much interest at that time, so I didn't pursue it formally. We still see the FS/WTB posts in .misc, but at least no one is flaming these folks *on the newsgroup.*

>(Quote on easy ways to create newsgroups accidentally deleted).

I thought this was an interesting article. Bottom line, it pointed out that all this pre-RFD discussion could unduly prejudice voters who would ordinarily cast a "yes" vote or, at least would not vote against the proposed newsgroup.

>While some people approached me on the subject of getting together an

>the hostility shown by some of the hams toward anyone questioning the
>term hasn't done much for the prospects of a newsgroup, when, as, and
>if, an RFD is ever drawn up and posted.

Exactly my point, WRT the article I mentioned above. My feeling is, the people who will actually use the group, should get to name it.

I haven't heard the term "boatanchors" used in the context of a new product, though. The mental picture I get is of obsolete, heavy, possibly military-surplus gear, definitely based on the vacuum-tube technology.

In the computer profession, the terms "boatanchor," "antique" and "museum piece" are also used. Depending on the user, a boatanchor could be an old mainframe not in common use, a pre-IBM-PC such as one based on the 8080 or Z80 CPU, or even a slightly out-of-date PC, such as one based on the 8086/8, 80286 or even 80386 CPU; i.e. not leading-edge technology.

It's my understanding that the proposal has been submitted, and those who post the RFD message are a bit backlogged at this time, so I expect the formal discussion to commence soon.

>So far as the traffic question goes, I have kept my eyes open for

>reality that needs to be considered.

As far as the namespace issue is concerned, I guess that's another discussion, and I'm sure it will be brought up during the RFD period.

It will be interesting to see what traffic looks like, assuming the vote goes our way. I can see some of the folks on the boatanchors list participating in both, but I doubt that many will leave the list.

>So far as the history of creation of the rec.antiques.radio+phono
>newsgroup is concerned, technical talk on acoustic phonos and old home
>entertainment radios was becoming significant on the rec.antiques
>group, and it did not fit very well there. Bill Robie's decision to

>73,
>Todd
>N9MWB

Todd,
You can only send the traffic if the country it is destined to
is on the third party list. For example, to here (Guam) is
zipcode@NTSGU and the Philippines is NTSPI, problem
being the P.I. doesn't have zipcodes. After running a BBS and
a satgate for three years, I wouldn't recommend any international
NTS traffic, unless you really don't care if it gets there or not.
Most systems are not set up to handle it, and most system operators
are in the 'automatic' mode. NTS stuff would get here only after
someone in the U.S. caught it and figured out it was for Guam
and then readdressed it to me at my bbs. Send a message to
the operator of the system you are originating from if you don't
know the NTSxx of the country, and that will tell you if he is
even set up to handle it. I can dig thru my old forwarding files
if you tell me where it is going......

> via amateur radio, hence there is no NTS system operating there.

Yes, I am familiar with third party agreements. We do in fact have
a third party agreement with the country of interest (Australia).
In addition, it is possible to get third party traffic delivered to
a country that one doesn't have a third party agreement if
the message can be delivered to one or more intermediates
that do have third party agreements.

So is there a way to address such messages, or do I need to
check in with one of my local traffic nets and initiate the
traffic by hand? This is being done as a project by the students
in the radio club I sponsor and the first message someone
wanted to send was to Australia, sigh.

: might be in order.

: Dave K4JRB

Well, about a month or so ago I made a quick pass over the range from
220-222 MHz and much to my suprise I found that there is quite a bit
of activity there in the greater Los Angeles area.

It is definitely narrowband and probably ACSSB (sounds fine on the rather
crude hack I use to monitor VHF/UHF SSB on a shoestring budget 8*). There
are digital control channels (much like you have in trunking systems),
and in most cases voice transmissions are accompanied by some sort of
multiplexed data (probably GPS position data).

Actually, if anyone knows the allocation scheme for the band and/or the
technical specs of the systems operating there, I'd really like to hear
from 'em 8*)

I also made a quick pass over the 216-220 MHz range - it turns out that
AMTS is up and running out here, with most of the activity (that I've found)
between 217-218 MHz, FM at 12.5 KHz steps.

Six meters was in the Columbus OH area on 6-2-96. Talked to two stations in central FL on 52.490 and 52.525 Mhz FM with only 10 watts! KE4BAG? and KF4JHI were the contacts.

Hope 6 meters opens up again!

The ITU Radio Regulations do not say that. The state that international third party communications is forbidden between amateur stations. The Regulations further state that this provision can be modified by special arrangement of the conturies concerned. There is no mention of the third party origination or destination. For example, let us say that there is a TPA between Canada and US, and US and Germany, but there is not one between Canada and Germany. In accordance with the ITU Radio Regulations, it would be perfectly acceptable for a message originating in Canada for Germany to be passed first to the US then sent on the Germany because of the special arrangements. To emphasize, the origination and the destination of the message has no bearing in the exchange of the third party traffic.

To get too excited about this idea. If this thing goes through (which it
won't), the big manufacturers stand to gain a considerably larger market
for radios on those frequencies. I'll bet they wouldn't mind that a bit!

: Gosh! Who licked the red off your candy? But then again, I rather
: doubt that hams will have the spectrum we do now in the next hundred
: years or so. "Traffic" as we know it now will not be needed;
: "important" conversations are probably best left to another mode
: anyway, and "contests".......
:

I think that hams have as much a right to enjoy natural resources as those who use the national park system, or private access to airspace.
In this age of cellular phones and satellites, many of us seem to forget how *amazing* it is that hams have been communicating worldwide for 60 some years simply by bouncing radio waves off of the ionosphere! Needing only a decent run of wire, and a few watts of electric power.

Most of us treat this privilege with the respect that it deserves.
We learn how to use the equipment and the resource properly, and...
many hams have been *innovators* in communications technology, including satellites and packet networking.

To say that commercial interests could make "better" use of it is BS.
They will make *money* off of it, no more, no less. As people continue to see their communications and recreations costs rise with the introduction of cellular phones, access to the Internet (another "resource" in many ways), cable television, etc., at least hams can continue to provide a recreational and emergency *alternative* route for communications which doesn't depend on the organization and planning and beneficence of some major commercial venture.

Think about what life would be like if there was no more *broadcast* television or radio... only cable, or maybe digital subscription radio. What if you couldn't communicate with other people without it costing you $30 per month? What if your every communications depended on the reliability of somebody else's service? Have you tried to use a public telephone lately? They are hard to find, poorly maintained, and nearly useless except possibly for 911 calls (if they work).

(I speak after having no telephone service for 3 days
due to some problem caused by recent heavy rains
with a past history of essentially "lip-service"-only from Ameritech
regarding my problems with noise and static on my telephone lines.)

We need Amateur Radio. We have a *right* to our teensy bits of radio spectrum.

The people to write to now are not those in/on the IWG-2. I called one of them today and was told that she had contacted an attorney to take action against the ARRL because she'd been targeted because she was female. Another lady committee member said she didn't feel that way, and actually knew about the experimental portion of the band.

Who (whom?) should we write to?

-Members of the Federal congress.
-Members of the State legislature, Emergency management, etc.
-Local OEM, hospital, fire and rescue, public service organizations (Christmas in June, marathon, air show, parades)
-Any individual who's benefited from amateur radio (radio gram from/to a disaster area, had police or AAA called by an amateur)

Ask them to write their Fed and State legislators, and the list on the ARRL list.

Have them point out how they were helped at no cost to the government. Also, that if the VHF/UHF frequencies are take from amateurs, some health and safety services will not be performed because the public service bands are already crowded and state and local government can't afford the time and operational functionality to do them.

It's going to be NON amateurs going to bat for amateurs that will save our bands.

The equipment manufactures don't care... They'll just sell to the LEOSat folks instead of amateur, and charge more!

I would kindly ask you to send a copy of your posting to some congress people. And maybe somone could supply some pretty precise numbers on the number of ham radio licenses issued in ...

.... Japan
.... United States
.... Germany
.... whatever other country might be interesting

A few years ago -- unfortunately I do not recall the paper -- I read a feature in some publication (which is NOT ham radio related), in which some technology editor contemplated, wether or not there might be a correlation between the technological ranking of a country and its number of ham radio licenses. If that study, which I recall as pretty convincing, has any grain of truth with it, killing the mein no code amateur radio bands in the United States will have repercussions, in that the United States might drift back even more compared to the Pacific rim countries. And if so, removing a Warren Richards from chairing a FCC committee immideately might even be in the National Interest...

But how about the people who want to experiment with different antennas, homebrew transimtters etc.? They _must_ learn CW before they can do anything.

I suggest the CW-exam will be replaced by one that proves your knowledge of electronics. That's what you need for real amateur-radio!

After reading the postings concerning the possible take over of 2 meter and 70 cm by the LEO industry, I wrote to all the listed concerned officials. It was, I think, a nice polite, well thought out letter. The feelings of a citizen on an issue, for which he had concern.

What I received in return was my E-mail bounced back to me from each person on the list, with no comment. Some, like Holiday, more than once. I guess this was his feeble attempt at a mail bomb. Below is a copy of my incoming mail, I use ELM. All were returned with the E-mail address of the concerned party as received correctly.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

All MFJ tuners are of comparitively poor quality. I use their smallest, el-cheapo, no meter, no switch tuner in my van that I got for almost nothing. It works because:

1. My swr is low anyway.
2. I run less than 100 watts.
3. I don't care!

All their tuners are toys. I've had their bigger ones and they always arc on certain bands. Their little cheap baluns melt. I had a 941 and to make it work on 160 meters I removed the lid. Yes, the coil is crammed in their vertically! The lid is so close to the end of the coil that the inductance is greatly reduced not to mention the extra losses.

Alas. What to recommend? Some of the old Dentron tuners were better built. Look for them at a hamfest. I have a Drake MN7 that's built like a tank. You can pick these up for around $125 or so at a hamfest. Want mine?

I have composed the following letter to the appropriate individuals in regard to the threat to our 2 meter and 70 cm bands. I am placing the letter in the public domain. Feel free to use it in any way you will. You may sign your own name to the letter or you may edit it to more clearly reflect your own opinions. But whatever you do, PLEASE write the appropriate individuals at the following addresses:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554, choliday@fcc.gov, fax 202-418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520, richardswg@ms6820wpoa.us-state.gov, fax 202-647-7407.

Tracey Weisler, FCC Rep, IWG-2A, International Bureau, FCC, Washington, DC 20554, tweisler@fcc.gov, fax 202-418-2824.

Mary Kay Williams, Final Analysis, Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD 20770, fax 301-474-3228.

I recommend a fax, an e-mail AND a surface mail edition if possible.

[LETTER FOLLOWS ---- CUT HERE]

To: Warren G. Richards, Chair, IWG-2A
Re: Amateur Band Reallocation
Date: June 3, 1996

Cc: Tracey Weisler, FCC Rep, IWG-2A, Mary Kay Williams, Final Analysis, Inc, Cecily C. Holiday, International Bureau, FCC

It has come to my attention that the IWG-2A is preparing draft US proposals for the 1997 World Radiocommunication Conference. It has further come to my attention that the IWG-2A has before it a list of ''candidate bands'' for low-earth orbit mobile satellites (''little LEOs'') that includes, among a number of others suggested for consideration, the 144 and 420 MHz bands, that is, the 2 meter and 70 cm bands currently allocated to the Amateur Radio Service. The fact that these bands are even being considered is outrageous in the extreme. Although it might appear, at first blush, that these frequencies might serve the LEO service well, there are a number of reasons why it is the best interest of the IWG-2A to look elsewhere:

1) These are the most heavily used bands in the Amateur service used by nearly all of the approximately 700,000 US amateurs as well as the 10 million operators world-wide;

2) In addition to normal voice communications, these frequencies already house a gigantic international digital packet radio network similar to the Internet;

3) These frequencies serve the internationally acclaimed amateur satellite service and as such are used by a plethora of satellites funded by common citizens donating millions of dollars toward their construction and deployment;

4) These bands are heavily used by a number of public service organizations including:

- ARES, the Amateur Radio Emergency Service,

- RACES, The Radio Amateur Civil Emergency Service which is coordinated through state and local disaster relief organizations,

- MARS, the Military Affiliate Radio Service which provides familial communications for hundreds of thousand of US service personnel and coordinates with the military during communications emergencies and

- Handi-Hams, and agency that providing technical education for handicapped citizens. Indeed the preceding only scratches the surface of educational and public service activities that are conducted on these bands these range from the coordination of the Boston Marathon to local astronomy networks.

Please understand that if this proposed reallocation were to occur, millions of individuals would see the value of their property reduced to nothing. While the reallocation of these bands to little LEO service would entail horrendous problems for millions of citizens, it would be unmanageable by industry as well. The public outcry against this action will clearly be felt by congress. Right now, hundreds of thousands of letters similar to this one are arriving at the FCC as well as all congressional delegations. The clout of even a well-heeled industry group such as yours cannot hope to compete with the pressure brought to bear by hundreds of thousands of concerned voters. For you, this could only be an exercise in frustration. It is clearly in your best interest to look elsewhere.

Even if you were somehow able to have these frequencies reallocated, they would be almost impossible to manage. Imagine trying to conduct paging operations on frequencies for which millions of multi-mode transmitters and antennas are already in the hands of individuals who believe that they have been robbed. Not that I would endorse illegal activity. Far from it the vast majority of amateur radio operators are strictly law-abiding. But clearly this reallocation would create an unusually complex as well as emotionally tense situation that would be difficult to police and painful to all concerned, even if it directly involved only a tiny minority.

Please do the industry as well as the American public a favor and make sure that the amateur 2 meter and 70 centimeter bands are excluded from consideration for reallocation to little LEO service.

I don't recall that there was any discussion of "exclusion" of anyone.
The existing charter discussion welcomes hams to the group.
Conversely so far as I know non-hams are welcome on all the present
amateur radio newsgroups as well as the present boatanchor mail list.
There are a great many topics that are of equal interest to non-hams
as hams, and two of the strengths of the antique group have been
people with technical experience with broadcast radio and engineers
who know their way around pre-IC/SMT analog designs. I have never
tried to take a census, but I think that most of our technical
contributors are not hams, although a design engineer with diverse
experience will have had experience with small transmitters of the
types used in amateur radio, with the possible exception of single
sideband exciters and modulators.
>
>I don't discount the fact that the proposal to create a boatanchors
>newsgroup grew out of problems with the list subscription concept, but

>
(Quote on easy ways to create newsgroups accidentally deleted).

While some people approached me on the subject of getting together an
RFD for a Usenet newsgroup to paralllel the existing mail list, I have
not heard anything for several months. My response was that I was
committed to the FAQ for the antiques group, and if someone felt there
was enough support for a Usenet group, I would support an RFD and be
willing to comment on it based on my experience with the antiques
group. I was explicit in telling several people that some other name
than "boatanchors" was highly desirable for Usenet.

We've had this haggle about the name of an undefined newsgroup going
on for over a month, and I think that it has been something of a

disservice to post about the name without giving any information about the group, and to allow this to go on for weeks. From my own perspective as a non-ham engineer, I am astounded to hear that hams were calling some of the things I was working on "boatanchors" as the time they were new products. To me, that has always been a term of derision, and if I had used it, I think I would have spent some time on the carpet learning better terms. I do really feel that some of the hostility shown by some of the hams toward anyone questioning the term hasn't done much for the prospects of a newsgroup, when, as, and if, an RFD is ever drawn up and posted.

So far as the traffic question goes, I have kept my eyes open for evidence that the people who left the existing mail list were looking for a new home, and would have expected some of this to pop up on the rec.antiques.radio+phono group. I've seen nothing there, and very little in the rec.radio.amateur groups. I don't doubt that there is a small core group who would like such a group, but don't see the 150-180 votes needed for the group in an uncontested vote, where the name or charter was not an issue, much less the 250-300 votes needed if non-ham news.group readers become inspired to vote against the group over namespace or charter issues----and that is a part of reality that needs to be considered.

So far as the history of creation of the rec.antiques.radio+phono newsgroup is concerned, technical talk on acoustic phonos and old home entertainment radios was becoming significant on the rec.antiques group, and it did not fit very well there. Bill Robie's decision to draw up an RFD and shepherd it through was based on existing traffic and a desire to have a lot more of it. There were substantial changes to the charter before the vote took place, largely the suggestions of "outsiders" to the initial discussions on rec.antiques, and the group passed its vote rather handily. This is the sort of thing that should be happening here.

A recheck using "radio" as the search word shows the above-listed FAQ,
as well as the rec.antiques.radio+phono FAQ and a FAQ for
rec.music.christian. I also see a posting of an "Elmer's resource
guide" that was posted today, which has the word "amateur" in its
title. A keyword search on the string "FAQ" in this group produces
nothing, although the "Guide to Personal Radio Newsgroups" is on the
Netcom spool, as indicated above.

As far as I can remember, UPS helped fund a small electronics contractor in
the Seattle area (SEA, Inc. or such) who in turn did actually develope some
experimental ACSSB radios on 220. But, trials in the Seattle area did not
work out, and apparently UPS went to 800 mhz trunked or some equivalent.
Don't think they are using satellites, tho.
In the meantime, the FCC set up a number of licensing schemes for regional and
nationwide 220 narrow FM or some other technology (maybe even ACSSB) - I don't
know if any systems are up and running as yet (it's been 5 years !!!)
Perhaps someone could check the FCC Database for any info on this.

Mike Miller N0JAS Des Moines, IA
mikemiller@dsmnet.com

PS. There might be information in the commercial 2-way magazines (archives)
about this subject as well - some might be on the net.

Ralph Lindberg & Ellen Winnie <dragonsl@scn.org> wrote:
>jherman@Hawaii.Edu (Jeffrey Herman) wrote:

>>Again (and again!), a particular group is not meant to target *every*
>>ham worldwide.

> No, but the name should be clear to most hams. The current evidence is
>that while this is true for American hams, it is not true for most foreign
>hams. Even more the on the bands, Usenet is international

Hello Amateur Radio Friends In Australia,
Here in the US we are proposing a new group titled
rec.radio.amateur.boatanchors. One of the opponents, Ralph Lindberg,
considers "boatanchors" an inappropriate name - he believes that most
foreign hams are unfamiliar with this term. Thus, I've chosen you good
folks in the Southern Hemisphere for an informal poll. PLEASE REPLY VIA
EMAIL only, as this message is cross-posted to a non-amateur group
(news.groups).

All I ask is that you answer the following questions (briefly!):

1. Have you ever heard of the ham radio term "boatanchors"? [YN]
2. What class of license do you hold? [VHF-only, or all band]
3. How many years have you been licensed?
4. How many years have you been interested in radio

For those without an amateur radio license please answer 1 and 4.
Please do not include any discussion, as the Request For Discussion
(RFD) will appear later, and we'll certainly then welcome your comments!

Very warm regards from very warm Hawaii,
Jeff KH2PZ/KH6

P.S. I am not including Ralph's email address in the Reply-To line
for I don't want to flood his mailbox (which I'm sure won't happen
anyway since the traffic on aus.radio.amateur.misc is low), so I'm
sure I'll be accused of falsifying the results... Just can't win!

>teur.
>They would just make minor changes and be on their way!

Hi Bruce, Not too many commercial folks are remaining on VHF-Hi - the drive
is to move higher. Thus, the above manufacturers would probably have to
cease producing all such 2m gear. Also, there's more than "minor changes"
that would have to be performed to 2M radios in order to sell them to
the commercial folks on VHF-Hi.

That transistor some guys at the phone company invented almost 50 years ago. In alt.binaries.pictures.12hr and a.b.p.misc

There's an urban legend saying that the invention of the transistor was a bootleg project hidden from the boss. Because the boss said "That ain't never gonna work, forget it!". So, they put the lab setup on a cart, and hid it in a storage locker untill after the boss went home. And got it out and worked on it after hours.

Figures that the biggest invention on the whole damn planet was a bootleg project! Looks like there were bozos in management even back 50 years ago. Lord knows I've had to deal with some in the past few years....

>for good discussions and repost just as they now import the r.r.swap
>articles of interest. Mirroring the newsgroup or list may overwhelm those
>who need it most, our friends who only have e-mail as a source of
>discussion.
>
I have no idea what discussions, if any, there may have been about
gatewaying the mail list to a newsgroup or vice-versa. At the time
that the mail list went to subscription only, it seemed to me (I did
not keep statistical records) that the vast majority of comments were
in favor of the subscription list, and opposed to starting a Usenet
newsgroup.

>Didn't Pat Towsend try to corner the market on telecom discussion only to
>find after a couple of newgroup votes that an unmoderated technical
>discussion news group could use the c.d.t. naming? This time it looks
>like it is the tail that is wagging the dog.
>
Nobody has attempted to "corner" anything on the mail list that I have
seen. The list maintainer, Jack Hill, has posted here that he is in
favor of the group. I have seen no discussion about a Usenet
newsgroup recently in the mail list, and if it is discussed there, I
expect the discussion to be open. I don't think this was the case
with Townsend---it's been a while, but as I recall, he controlled both
the list postings and the parallel moderated Usenet newsgroup, and I
think one of the issues in the revote was the extent to which he
campaigning against the unmoderated newsgroup and filtering out any
rebuttals.

I think this is a very invalid comparison with the current situation.
As I say, I have no knowledge of what discussions people have had. My
estimate of low interest on the mail list is based on past discussions
of a Usenet newsgroup, not anything current.

Source record: 223885

Hi Im trying to get some interest in regular skeds on 2mtrs 144mhz in the UK
I have full power on 144 and 432. The only problem is that the bands are
dead unless its damm contest. and only in this time do i ever get a
contact. I located in Sheringham North Norfolk coast line England
JO02.. qra

I have a direct sea path to the north north.east east and south.east
I can hear many 144 beacons during flat band condx. Yet never any one to
have qso with.

So IS there any one in the UK Esp Scotland east coast that want to make
direct regular 144/432 skeds with me with SSB as the main mode.

Thanks Barry G8SAU Ex GM8SAU hi hi..

>that is destined for a foreign country?

In many (most?) countries it is not legal to send 3rd party traffic
via amateur radio, hence there is no NTS system operating there.

Just agreeing with your analogy, Drew. Another example, your ham
equipment. Doesn't require an act of the government to render it
useless, if you use it the same way you use your compter and modem,
it's redered useless because it's *your* equipment.

Didn't "incentive" licensing become the standard in the
mid-to-late sixties? The mid-seventies saw some changes to the
licensing structure such as renewable novice tickets but I wouldn't
call that incentive. I know a fellow who has held a novice ticket for
over twenty years. His call is now a WA1 call rather than the original
WN1 and he is active only on field day. Will he be eligible for OTC in
a few years?
Also, this thread evolving to the point that it should no
longer has any reference to W2NSD/1's "magazine" in its title.

2730. Software Update Announcement (DTS HLB)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-04 00:00:00 UTC
From: 100326.3126@CompuServe.com
Message-ID: <4p1csh$228@highway.leidenuniv.nl>
Source record: 223898

The DTS Ham Radio logbook has now been upgraded (Version 1.7).

We have decided not to upload this version the the Simtel and CICA archives at the moment because we hope to be releasing version 2.0 (which has just gone into beta) later this summer. All registered users who do not yet have the newest version will recieve it through e-mail within the next couple of days. Please read the upgrade information before installing as there have been some changes to the logbook database structure.

Please note that we will be increasing the price of version 2.0 because of the large number of additions and enhancmennts to the program. TNC terminal, complete Internet e-mail program etc. However we have decided not to charge users that have registered before the release of version 2.0 as origionally planned for the major upgrade to version 2.0 when it is released.

Users still wishing to register version 1.5 can still do so and will recieve version 1.7 upon reciept of there order.

Kind regards,

Chris Gallacher,
DTS, The Netherlands

Special Bulletin 15 ARLX015
From ARRL Headquarters
Newington CT June 5, 1996
To all radio amateurs

SB SPCL ARL ARLX015
ARLX015 N4T TN bicentennial

In observance of the 200th anniversary of Tennessee's statehood, the FCC has authorized the use of the special event call sign N4T through June 30, 1996. N4T will operate from the Amateur Radio display at the Bicentennial Mall in Nashville, Tennessee.

The station licensee and control operator is Ron Quednau, N4GHU, of Nolensville, Tennessee. The special event call sign was granted May 31 by the office of FCC Private Wireless Division Chief Robert H. McNamara.

N4GHU reports N4T operations are mostly on evenings and weekends, and operating hours are ''very flexible,'' since the station is relying on guest operators. N4T is equipped for HF CW on 80, 40 and 20 meters and will be available via satellite daily through June 7, 1996.

A commemorative QSL card signed by Tennessee Gov Don Sundquist will be issued for contacts. It also bears Sundquist's message: ''Let Tennessee Amateur Radio commemorate our Bicentennial with this QSL card.''

From: yuri@macline.com
Message-ID: <3291394.ensmtp@macline.com>
Source record: 223609

Perhaps what we should consider is that people outside of the ham community could be even more influential voices than us in supporting to keep our 2M/70cm bands from LEO. It's obvious that any VHF/UHF active ham wants these bands to remain as it is. I suggest that we solicit the groups we assist to write the FCC on our behalf: local weather service could demonstrate our need during Skywarn activites, emergency government to attest to our efforts in times of need, the local charity group that had hams provide communications for their fundraising walkathon, and so forth. Groups that have an indirect interest in maintaining the ham bands could prove to be a more persuasive voice than those of us with a personal interest.

Yes, it is more work to persuade somebody else to write on your/our behalf, but isn't it worth it?

Just my $0.02,
KB8RFU

: What happened to the pending boatanchors news group? Is the idea still alive?

There is an antique fellow trying to sink the group, but you know even if
he mires the proposal, boatanchors will eventually surface.

Please be patient. The new group process admits to a manpower shortage
and the charter discussion may begin soon. Should prove to be an
interesting read.

Well, I have modified a couple of ham rigs to operate outside of their
"out of box" limits. Exactly what "federal laws" have I violated?

If I can build a radio from scratch and put it on the air within the
privleges of my ham ticket without a type acceptance, why can't I modify a
Yaecomwood dualbander? The commercially manufactured ham radios aren't
type accepted either. They're registered for import purposes but the
operators are responsible for proper use.

Big problem? No, I don't see it. "Big Problem" is pretty subjective.
But I will admit that I haven't followed this thread since it's
beginning, and I did not word the above paragraph very well. I was
responding to the suggestion of "regulation" of the sale of equipment to
only licensed persons. Should you have to show your driver license to
buy gas or buy a car? How would mail order radio business comply?

And regardless of problems on transoceanic aviation, or any other
service, I am not ready to pay for that through design restrictions on
amateur equipment. Someone needs to go back to the drawing board and
find another solution to that problem. I am still not ready to go along
with suggestions I have seen so far.

>This happened all just for "national security" and so was for sure
>properly justified.

Now Tor, let's be careful here. First, do you have any idea how those American civilians residing in Japan were treated by the Japanese government when war was declared between the two countries? No, of course you don't. The American government treated the Japanese-Americans (JAs) *much* better than the Japanese treated American civilians.

Japan was the first government in modern history to invade our soil, and *yes* there were Japanese spies here in Hawaii providing US ship and air movements to the Japanese government. The action the US took against the JAs was justified.

Martial Law was declared here (the military took over all civilian government operations); during martial law all civilian rights *have* to be suspended, and a "shoot first, ask questions later" policy *has* to be implemented for national security and welfare of all. Can you imagine being arrested by the military because you violated curfew or allowed household lights to be seen from outdoors at night? Probably not.

It's fine to be an armchair historian 50 years later but unless you've actually been bombed by an invading force you'll never understand why the US had to take the actions it did WRT the JAs.

BTW, reparations are being made to those JAs who were interned.

Which direction? Modifying commercial radios to operate in the ham bands is perfectly fine, but doing the converse puts you in violation of federal law.

>I really don't see the problem as being unlicensed persons buying
>radios with the intention of being bottlegers (those types of

Clearly
You jest

LEO use of the existing amateur bands is a second
attempt to grab the bands.

Remember the 220 waste

After they got the spectrum they could not make use of it.

Although amateurs may not have the power to keep a commercial intrest
from stealing our spectrum, we make up a significant portion of the
decision makers, and prospective client base. UPS has not seen any
of my business since the 220 issue.

I would suggest that we as a group, can bring a lot of finacial pressure
to bear, with our pocket books and our recomendations. As we control
or influence to various extents, the purchasing decisions of the market
place and most potential target customers.

A listing of the Companies proposing the LEO allocations in our bands
should be posted and a followed with concerted effort by all amateurs
to boycott, or otherwise negativly impact these companies.

In other words, the LEO guys want to lay claim to the existing amateur
satellites? I strongly doubt this is a motive.

>Thanks,
>Peter VK5ZPG

TUNING KNOB STEPS

The tuning knob rate is preset by switch S3005 on the Local Unit for
10kHz per revolution(it's the fast position)
To change this to 5kHz per revolution, locate S3005 and move it to the
5kHz position. (Look in the operating Manual on page 15)
You will find the switch above the two large IC's.

I hope this helps

Jim Cummings' point was that the prohibition (including in the FCC
regulations) is on the exchange of third party traffic between
amateurs. It says absolutely nothing about what the amateur at
the other end does with the message, or about the content other
than the usual amateur restrictions. As a result, I can send third
party traffic that is destined to a country that the U.S. does *not*
have an agreement with as long as I can find one or more
intermediary stations that *do* have third party agreements.
This mechanism has been suggested in the Public Service
Communications Manual of the ARRL.

It still doesn't answer my question of how do I address traffic
destined for a non-amateur in Australia. I'm guessing I need to
check into a traffic net or try an international BBS, although even
then, it is unclear as to whom the traffic is addressed.

Be sure to include your postal snail-mail address, so they can figure out
you're one of the voters in their district. If yours isn't on this list,
you might figure out what it probably is from looking at the format of those
below. Assuming they have just gotten on-line. sorry, don't have time to
edit out the web page trash, figure I should post this quickly.

Congressional E-mail Addresses

UNITED STATES HOUSE OF REPRESENTATIVES

CONSTITUENT ELECTRONIC MAIL SYSTEM

* *

These e-mail addresses are intended to provide an addi
tional vehicle for Ham Radio operators to communicate with their
elected representatives in Washington D.C.

It is critical that you include your name and address in all your e-mail messages,
preferably at the top of the message. Most Congressional offices have adequate staff
resources to respond only to their constituents and
your inclusion of your full name and mailing address will
insure that your Member can identify your residence
within his or her Congressional District.

* *

Many offices are using an automatic response to all in-coming
messages, so you can expect to receive a message back from most of the
addresses to which you send a message.

Please review the list of participating Representatives below,
and if the Congressional District in which you reside is listed, follow
the instructions to begin communicating by electronic mail with
your Representative. If your Representative is not yet on-line, please
be patient.

U.S. REPRESENTATIVES PARTICIPATING IN THE CONSTITUENT

ELECTRONIC MAIL SYSTEM.

INSTRUCTIONS FOR CONSTITUENTS

The list above includes the electronic mail addresses of Members

who are participating in the program. The primary goal of this program

is to allow Members to better serve their CONSTITUENTS. In addition,

constituents who communicate with their Representative by electronic

mail should be aware that Members will sometimes respond to their

messages by way of the U.S. Postal Service. This method of reply

will help to insure confidentiality, a concern that is of utmost

importance to the House of Representatives.

The other day, a local ham demonstrated this software
and we were hooked into a repeater in Houston, TX via the
internet. It was very neat.
Does anyone have an updated list of repeaters who are linked via
"Internet Phone/Repeater Link" software ?
http://www.onramp.net/swta/rptrlink/
Is it catching on ?
Any feedback would be appreciated.

Okay, Bill, I've seen this start an argument that went on & on... what's the point
of your point? What's the difference between 50MHz and up and ham bands above 30MHz?
After 10M (28.000-29.700MHz) the next ham band is 6M (50.000-54.000MHz). So, the first
frequency above 30MHz that any ham can use is 50MHz. Isn't that what was stated? :|

Would the prohibition apply to a transverter that requires an input
frequency other than 11 meters? I thought the idea was to keep an amp
from being added to a typical CB transceiver.

Hey Gang

Just a quick note with a small update (MAJOR UPDATE EXPETED IN A DAY OR 2)
The Case about the Christian County Ky Ham (and new ARES Director) that
was scheduled for Tuesday June 4th has been postponed until Thursday
June 6th same time. It appears that some ARRL big wig wanted to be
ge there so as I have been informed the Judge moved it until Tomorrow.

On the Officers side of this, BOTH OFFICERS INVOLVED HAVE BEEN SUSPENDED
from their jobs by the police department. Seems someone higher up than the
chief pulled some strings.

I have set up an E-Mail jump with my source KI4AT and I have been told that
he will E-Mail me any thing about this case.

Until later:

73

Tim KD4OVM

Message-ID: <AX25-HOWTO.1-2157.834018583@cc.gatech.edu>
Source record: 223668
Cross-posted to: comp.os.linux.answers,rec.radio.amateur.misc,aus.radio.amateur.digital

Archive-name: linux/howto/ax25/part1
Last-modified: 4 May 96

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux AX25 HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.0 25 Apr 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
everything.
Corrections/Updates:

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
recommend you also read these as they will assist you in your efforts
and provide you with stronger insight into other possible
configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities.

DAMA support was developed by Joerg, DL1BKE.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v1.3/

4.1.2. The network tools:

Not all of the changes to the AX.25 software have made it into all related software packages yet. While the kernel now comes standard with AX.25 and NetRom support the standard net-tools package doesn't yet support NetRom properly. Jonathon Naylor has made a package that does support it available until Bernd can put the modifications into the standard release.

If you intend to use the NetRom protocol then the special net-tools package that supports NetRom can be found at:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/net-tools-1.1.95d.tar.gz

If you don't want to use NetRom then I strongly recommend you stick to the latest release of the standard net-tools package which can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-1.3.91a.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-1.3.91a.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-1.3.93.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want
it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network
configuration tools. These tools allow you to modify the configuration
of network devices and to add routes to the routing table.

The new release of the standard net-tools package includes support for
AX.25 by the NetRom support isn't yet complete. Jonathon Naylor has
produced an interim package which you should use if you intend to use
the NetRom protocol, otherwise stick to the standard release.

5.2.1. Building the `Special' net-tools release

I built Jonathons special release of net-tools with the following
commands:

```
# cd /usr/src
# tar xvfz net-tools-1.1.95d.tar.gz
# cd net-tools-1.1.95d
```

There are a couple of things you now need to do. Firstly, the ipfw no
longer works with new kernels, it has been replaced by the ipfwadm
command described below. Trying to compile it will result in errors so
you should edit the Makefile and place a `#' character before `ipfw'
in the line beginning with `PROGS' as illustrated:

```
PROGS = ifconfig hostname arp netstat route slattach rarp plipconfig
dnsdomainname #ipfw
```

Now you can enter:

```
# make
```

At this stage you will be prompted with a series of simple questions
to answer. Make sure you answer `Y' to AX.25 and NetRom support and
also to Ethernet, SLIP and PPP if you need them.

After answering the questions the software will begin to compile.

I compiled the tools with the 1.3.93 kernel source online and ran
across the following error in a number of different files:

```
In file included from slip.c:26:
/usr/include/linux/if_arp.h:119: `MAX_ADDR_LEN' undeclared here (not in a functi
on)
```

I solved this by modifying each of the files listed, in this case
lib/slip.c, as follows:

replace:

```
#include <linux/if_arp.h>
```

with:

```
#include <linux/netdevice.h>
#include <linux/if_arp.h>
```

You should make this modification for each of these files, all in the lib subdirectory:

ax25.c ether.c netrom.c slip.c

and also these files in the top level directory:

arp.c ifconfig.c rarp.c

Newer kernels, or newer net-tools may not require this, so it is probably wise to try without modifying first.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

5.2.2. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.3.50-BETA6f.tar.gz
# cd net-tools-1.3.50-BETA6f
# make
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'. The first question relates to NLS (National Language Support). I do not use this, and it will always be safe to answer `N' to, but if you require it then include it.

I compiled the tools with the 1.3.93 kernel source online and ran across the following error in a number of different files:

```
In file included from slip.c:26:
/usr/include/linux/if_arp.h:119: `MAX_ADDR_LEN' undeclared here (not in a function)
```

I solved this by modifying each of the files listed, in this case lib/slip.c, as follows:

replace:

```
#include <linux/if_arp.h>
```

with:

```
#include <linux/netdevice.h>
#include <linux/if_arp.h>
```

You should make this modification for each of these files, all in the lib subdirectory:

arcnet.c ax25.c ether.c netrom.c
netrom_rt.c ppp.c slip.c tr.c
tunnel.c

and also these files in the top level directory:

arp.c ifconfig.c rarp.c

Newer kernels, or newer net-tools may not require this, so it is probably wise to try without modifying first.

When the compilation is complete, you should need only use the:

make install

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

cd /usr/src
tar xvfz ipfwadm-2.0beta2.tar.gz
cd ipfwadm-2.0beta2
make install
cp ipfwadm.8 /usr/man/man8
cp ipfw.4 /usr/man/man4

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

cd /usr/local
gzip -dc ax25-utils-1.3.91a.tar.gz | tar xvvof -
cd ax25-utils-1.3.91a
make install

The files will be installed under the /usr/local directory by default in subdirectories: bin, sbin, etc and man.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure it to work as a `vanilla' AX.25 interface with no TCP/IP. There are two distinct parts to the configuration, configuring to allow outgoing connections and configuring to accepting incoming connections. They are described in turn.

6.1. Configuring to allow outgoing connections.

The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card/PacketTwin card.

If you are using a KISS TNC then you will need to create the AX.25 interface as it will not already exist. Creating an AX.25 port is very similar to creating a slip device. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program (refer to the NET-2-HOWTO for more information on slattach and the other network software for Linux). For example:

```
# /usr/local/sbin/axattach -s 4800 /dev/ttyS1 VK2KTJ-1 &
# sleep 2
```

would configure your /dev/ttyS1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ-1. The sleep of 2 seconds is necessary just to give the kernel a little time to do some housekeeping that it has to do before you try and change the interface.

If you are using a PI or PacketTwin card then you should use the axsetcall command to change the callsign of the appropriate port to that which you intend to use. Refer to the PI/PacketTwin section for the names of the network devices to use.

All this step has done is to actually activate the device in the kernel, you need to run other programs before you an actually make use of the port. The AX.25 ports have a configuration file that can be read by any program that wants to find information about an AX.25 port. This file is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

callsign baudrate window label

where:

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.
window
is the AX.25 window (K) parameter. This is the same as the MAXFRAME setting of many tnc's.

label
is a name for the port.

In my case, mine looks like:

VK2KTJ-1 4800 1 radio

Note that this file is line based, that is, the first entry is considered to describe `AX25 port 1' and the second line to describe `AX25 port 2'. Some of the application programs need this `port number'. At this stage not all of this information is used, it will be picked up and used in later developments.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call VK2DAY via VK2SUT

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-1.3.91a distribution for more information.

6.2. Configuring to accept incoming connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the software list at the start of this document there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

You do this within the /usr/local/etc/ax25d.conf. This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored
by the ax25d program.

<interface_call>
is the AX.25 callsign of the interface that this particular
paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Windows parameter (K) or MAXFRAME parameter for
this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.
<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments

specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

You need one section in the above format for each AX.25 interface you
want to accept incoming AX.25 connections on.

There are two special lines in the paragraph, one starts with the
string `defaults' and other starts with the string `default' (yes
there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `defaults' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The
`default' line is what sets those default values. The kernel software
itself has some defaults which will be used if you don't specify any.
The trap is that the these defaults apply only to those rules below
the `default' line not to those above. You may have more than one
`default' rule per interface definition, and in this way you may
create groups of default configurations.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
```

```
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * * *
VK2DAY-1 * * * * * * * * * *
default 1 10 5 100 5 0 root /usr/lbbs/bin/bbsrx bbsrx -s %u
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the bbsrx program to run with a command line argument of the callsign of the connecting peer in lower case with no SSID.

If you wanted to define rules for another interface, even a NetRom interface, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package.

6.2.1. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be log in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /usr/local/etc/ax25d.conf file:

```
default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if

there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

You can alter the behaviour of axspawn in various ways by use of the
/usr/local/etc/axspawn.conf file. This file is formatted as follows:

```
# /usr/local/etc/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.
shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. You need
to use the ifconfig program to configure the ip address and netmask
details for the port and add a route via the port, just as you would
for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration
many of you would be familiar with if you have used NOS or any of its
derivatives or any other tcp/ip software. Note that the default route
might not be required in your configuration if you have some other
network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings
every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two
files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the
NetRom port.

This file is formatted as follows:

callsign alias description

Where:

callsign
is the callsign that the NetRom traffic from this port will use.

alias
is the NetRom alias this port will have assigned to it.

description
is a free text description of the port.

An example would look something like the following:

VK2KTJ MTCOLAH NetRom Switch Port

Note again that the first line refers to the first NetRom interface,
the second line refers to the second NetRom interface and so on.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

port min_obs def_qual worst_qual verbose

Where:

port
is the port number obtained from the /usr/local/etc/axports
file. The first line in the file describes AX.25 port number
one, the second describes port number two etc. If you do not
have an entry in /usr/local/etc/nrbroadcasts for a port then
this means that no NetRom routing will occur and any received
NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

1 1 200 10 1
2 1 200 10 1

8.3. Starting NetRom

When you have the two configuration files completed you start NetRom with the command:

```
# /usr/local/sbin/netromd
```

You should then be able to make NetRom connections with the call program to NetRom hosts.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to configuring an AX.25 interface for tcp/ip.

Again you use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to configure your nr0 for IP with an IP address of 44.136.8.5 and a callsign of VK2KTJ-1 you would use something like:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
```

```
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 1.3.93 kernel is actually newer than that included in the package and the normal installation process would have overwritten the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

```
vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
```

```
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

13.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

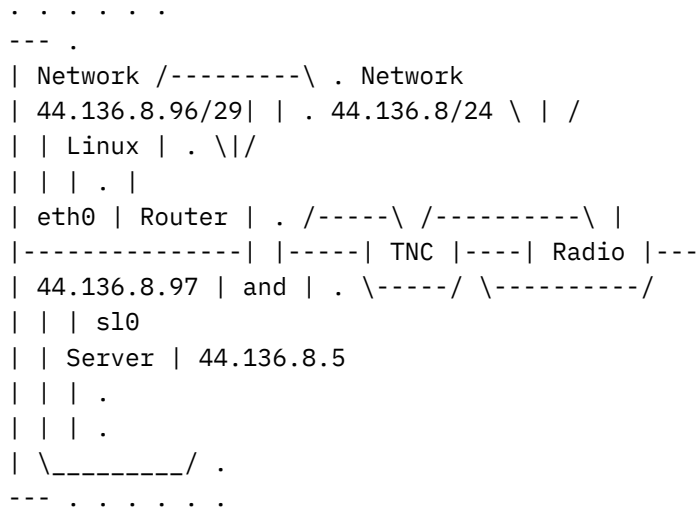
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

14. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

14.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.
```

```
echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
/usr/local/sbin/axattach -s 4800 /dev/ttyS1 VK2KTJ-0 &
sleep 2
/sbin/ifconfig sl0 44.136.8.5 netmask 255.255.255.0 \
broadcast 44.136.8.255 mtu 512 up
/sbin/route add 44.136.8.5 sl0
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 window 1024 sl0

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

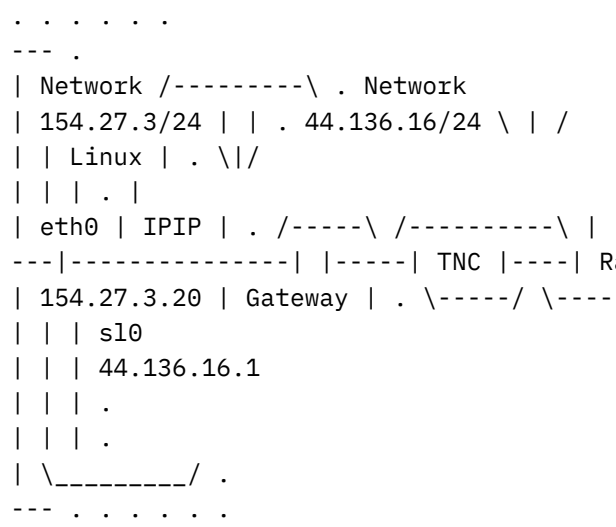
• The router machine is a lowly 386DX20 with a 20Mb harddrive.

```
14.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
```

routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
/usr/local/sbin/axattach -s 4800 /dev/ttyS1 VK2KTJ-0 &
sleep 2
/sbin/ifconfig sl0 44.136.16.1 netmask 255.255.255.0 \
broadcast 44.136.16.255 mtu 512 up
/sbin/route add 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
```

```
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

Some points to note here are:

- The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.
- You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

- The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

- Note the use of the mtu and window arguments on the ifconfig and route commands where appropriate. Setting these parameters to appropriate values improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
```

```
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"

echo "#"
echo "# the end"
```

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

Please, I'd hardly compare the misgivings of a few misguided hams
with those who suffered in the holocaust. And as for any comparison
to this and Nazi Germany, it is like saying the Michigan Militia is really
part of the peace movement!

2773. NuTest Amateur Radio study aid - nutest13.zip (00/26)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-05 00:00:00 UTC
From: dbell@cyberstation.net
Message-ID: <4p558j$fdh@quartz.cyberstation.net>
Source record: 223671

Product: NuTest Amateur Radio study aid
Version: 1.30
Version Date: 3-Jun-1996
Product Type: Software
Basic Distribution Policy (see License, below, for details):
Shareware, subject to distribution restrictions

Product Description: NuTest Amateur Radio study aid. Covers FCC
questions from Novice to Extra Classes. On
screen and printed tests are available.
Explanations are given for all answers as
online help topics The complete FCC Part 97
text is also included in a help file. Prices
start at $14.95 for a single exam class.
Works with Windows 3.1 and Windows 95.
Reason for version: New Extra Class question file, valid to 2000.

Category: Home & hobby; Ham radio
Keywords: NUTEST AMATEUR RADIO WINDOWS FCC WRITTEN TEST
Required Packages: NUTEST13
This Package: NUTEST13
Registration Fee: 14.95-29.95 (US Dollars)

Required Configuration
Processor Family: Intel 80x86 (minimum 80386)
Clock Speed: 16 MHz
Minimum OS: Windows 3.1
Standard RAM: 4000K
Hard Drive Space: 2000K
Required:
Hard drive
Keyboard
Mouse
Won't Work With:
Floppy only
Monochrome Display Adapter (MDA)
Hercules Graphics Card
Tandy Display Adapter
Color Graphic Adapter (CGA)
Monochrome monitor
Other Require: Sound card recommended, but not essential.

Orders:
Address: Tony Lacy
58 Bilbrook Road,

Codsall,
Wolverhampton,
United Kingdom.
WV8 1ER
CompuServe: 100030,157
Internet: 100030.157@compuserve.com
Other E-mail: Compuserve GO SWREG. Registration ID 10453

Support:
Address: Tony Lacy
58 Bilbrook Road,
Codsall,
Wolverhampton,
United Kingdom.

CompuServe: 100030,157
Internet: 100030.157@compuserve.com

===== Information for Users ("READ-ME") ================

WELCOME TO NUTEST!

I hope that you find Nutest a useful tool for learning the theory
required for the FCC written theory examinations..

NuTest runs under Microsoft Windows 3.1 or Microsoft Windows 95.

```

```

PURCHASING NuTest.

NuTest is not free software. This copy has been entrusted to
you so that you can decide if it suits your needs. If you find
it useful then you must purchase the right to use it. If you have
already paid a fee to a vendor then that fee was for copying and
distribution only.

For further information on your license to use and distribute NuTest
please consult the LICENSE section of this file.

There are several ways to purchase NuTest.

PAYMENT BY CHECK

You may register your copy of NuTest by mailing a registration fee in
dollars or Pounds Sterling to the address shown below. Acceptable
methods of payment are Postal Order, cash or Check (payable to A.

Lacy). If you wish you can print out a Registration form to include with your payment (this is in the program help file). Checks drawn on Non-U.K. banks are perfectly acceptable. Just write your check in the usual way, send it to me and I'll do the rest. I will send your software key to unlock the license classes you require by return post, but your check may require up to four weeks to clear your bank.

Here are the prices:

Number of classes Fee
1 $14.95
2 $21.95
3 $29.95

If 3 classes are purchased then the fourth one is included FREE!

Special price for NuTest (all classes) and NuMorse purchased together is
$45.00!

Are you a registered user of NuMorse? If so then contact the Author before ordering NuTest to get a substantial discount!

Please send payment and your list of required license classes to:

A. Lacy,
58 Bilbrook Road,
Codsall,
Wolverhampton,
WV8 1ER,
United Kingdom.

Please note that airmail takes approximately 5 working days between the
US and the UK.

PAYMENT BY E-MAIL

Registration is just a few keystrokes away if you subscribe to CompuServe:

GO SWREG.

Locate the entry for NuTest using the Registration ID for the License Classes that you wish to study. When the registration details appear answer 'y' to register your copy of NuTest. The fee will automatically
be debited from your CIS account.

For your convenience, I have set up a series of SWREG registration ID numbers. Choose the license classes you wish to study from the table below and use the corresponding SWREG ID:

License Classes required SWREG ID Total fee (US dollars)
Technician 10446 14.95

General 10447 14.95
Advanced 10448 14.95
Extra 10449 14.95
Technician and General 10450 21.95
General and Advanced 10451 21.95
Advanced and Extra 10452 21.95
All four license classes 10453 29.95

All classes AND numorse 10676 45.00

When I receive notification of your registration, I will send a software
key to allow access to your chosen license classes. If you wish to study a particular combination that does not appear in this table then simply E-Mail me with your requirements before you register.

PAYMENT BY CREDIT CARD

If you have a valid Visa or MasterCard then contact NorthStar Solutions
via any of the following methods to register NuTest:

Voice 1-800-699-6395
(10:00 a.m.-10:00 p.m., Eastern Standard Time. Toll free U.S. only)

Voice 1-803-699-6395
(10:00 a.m.-10:00 p.m., Eastern Standard Time.)

FAX 1-803-699-5465
(Available 24 hours, international and business orders welcome.)

CIS E-Mail 71561,2751 Internet 71561.2751@compuserve.com

Please have the following information ready when you call:
The program and version number (NuTest version 1.00)
Your mailing address (and Email address if you have one)
Your Visa or Mastercard number and expiry date.
A list of the License Classes that you wish to study.

Important note:
NorthStar Solutions processes registrations only.
Please contact the Author for product/technical support.

REASONS FOR PURCHASING NUTEST

Users who register receive a security code (software key) which converts
the unregistered version to a registered version.

Here are some good reasons for registering NuTest:

-I will provide support to registered users via CompuServe BBS, my CIS address is 100030,157. I will provide support by mail if you prefer.

-I will be more likely to continue enhancing and developing NuTest.

-Registration reminder screens are supressed in the registered version.

-Registered users get a software key which gives access to all License Classes up to Extra class.

PROGRAM SUPPORT

My support policy for registered users:

I will answer questions on program useage and attempt to fix any serious bugs that are reported. If a serious bug turns out to be due to
a specific feature of your system and I cannot offer a software fix then
I will offer you a refund of your purchase price. This support will continue to be provided for a period of AT LEAST three months from the date of registration.

ASP OMBUDSMAN STATEMENT

This program is produced by a member of the Association of Shareware Professionals (ASP). ASP wants to make sure that the shareware principle works for you. If you are unable to resolve a shareware-related problem with an ASP member by contacting the member directly, ASP may be able to help. The ASP Ombudsman can help you resolve a dispute or problem with an ASP member, but does not provide technical support for members' products. Please write to the ASP Ombudsman at 545 Grover Road, Muskegon, MI USA 49442-9427, Fax 616-788-2765, or send a CompuServe message via CompuServe Mail to ASP Ombudsman 70007,3536.

===== Packing List ==========

As released by the author or publisher, this package contained the following files in addition to this VENDINFO.DIZ:

Filename Size Date Time CRC32
FILE_ID.DIZ 361 4-Jun-1996 01:30a FCF06F64
INSTALL.EXE 1046290 4-Jun-1996 01:30a E9680C18
README.TXT 821 7-Apr-1996 01:30a B070E09E

===== Installation ==========

The installation procedure for NuTest is quite simple. The package includes a program, "INSTALL.EXE", which automates the entire process. You will need about 2Mbytes of available disk space on the hard drive on which you plan to install NuTest.

The exact steps you need to take will depend on how you received NuTest.

IMPORTANT NOTE

You must use INSTALL to transfer the files from the installation disk, do NOT use COPY. This is because the files have been compressed to fit

them on the distribution disk and will not be useable in compressed
form. INSTALL automatically expands them as it copies them to your
working directory.

INSTALLING FROM DISKETTES

To install from diskette(s), you need to perform the following steps.

o Place the NuTest distribution diskette in the
appropriate diskette drive.

o Execute the "INSTALL.EXE" program on the distribution diskette
using File Manager or Program manager in the usual way.

o Follow the instructions presented by the installation program.
You will have a chance to approve installation before any
changes
are actually made to the contents of your hard drive. The
program will ask you for a destination directory and will copy
the NuTest files to that directory. If you so direct it, the
installation program will install executable programs and
documentation in other directories of your choice. It will NOT
modify your autoexec.bat or config.sys files.

INSTALLING FROM A HARD DRIVE

If you downloaded NuTest from a BBS (or received it in the form of
archive files from some other source), you will need to perform the
following steps.

o Extract the contents of the archive file in a temporary
directory on your hard drive. The procedure for doing this
varies, depending on the form in which you received the package.
In all likelihood, the fact that you are reading this text means
that you already have the necessary tools and knowledge to
perform this step. If not, you should be able to obtain
directions for this from the same source from which you
received the package.

o Execute the "INSTALL.EXE" program in the temporary directory
using File Manager or Program manager in the usual way.
You will have a chance to approve installation before any
changes are actually made to the contents of your hard
drive. The program will ask you for a destination directory,
and will copy the NuTest files to that directory. If you
so direct it, the installation program will install
executable programs and documentation in other directories of
your choice. it will NOT modify your autoexec.bat or
config.sys files.

When you're satisfied that the installation was successful, you should
delete the temporary directory FROM which you installed NuTest
(C:\TEMPDIR, in the above discussion), including all its contents.

YOU'RE READY TO GO

Once you've complete the installation you should find a new MORSE program group in Program Manager or a new item in the Start button list
if you are using Windows 95. I hope you enjoy using NuTest.

If you are running NuTest under Windows95 then the program tabs may be obscured by the Windows95 Task Bar when using certain screen resolutions. You can avoid this problem by setting the Windows95 Task Bar to Autohide.

===== Warranty ==

LIMITED WARRANTY

THIS SOFTWARE AND ACCOMPANYING FILES ARE PROVIDED FOR EVALUATION ONLY, ON AN "AS IS" BASIS. THE AUTHOR DISCLAIMS ALL WARRANTIES RELATING TO THIS SOFTWARE, WHETHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. NEITHER THE AUTHOR NOR ANYONE ELSE WHO HAS BEEN INVOLVED IN THE CREATION, PRODUCTION, OR DELIVERY OF THIS SOFTWARE SHALL BE LIABLE FOR ANY INDIRECT, CONSEQUENTIAL, OR INCIDENTAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE SUCH SOFTWARE, EVEN IF THE AUTHOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR CLAIMS. THE PERSON USING THE SOFTWARE
BEARS ALL RISK AS TO THE QUALITY AND PERFORMANCE OF THE SOFTWARE.

===== License for Use and Distribution =================

NuTest for Windows, Version 1.10, Copyright (c) 1996 A. Lacy
All Rights Reserved

License Agreement:

Before using this software, you should carefully read this document. Your use of this software indicates your acceptance of the following terms, conditions, and warranty policy unless you have a different license agreement signed by the author, Mr. A. Lacy.

Evaluation and Registration:

NuTest for Windows is not free software. You are hereby licensed to use the shareware version of NuTest to evaluate its' suitability to your needs. The duration of the evaluation period is limited to twenty uses of the software. Unregistered use of the software after twenty uses is a violation of U.S. and international copyright laws.

Clarification of the term "use" of NuTest:

One use of NuTest is defined as one complete cycle of opening the program and closing the program regardless of the length of time that the software was running or the purpose for which it was used.

Minimizing NuTest to an icon is not regarded as closing the program.

Non-Commercial distribution of the Shareware version of NuTest:

Non-Commercial distribution is defined as distribution of the software by any Not-For-Profit organization or any individual user. You are hereby licensed to: (1) make as many copies of the Shareware version of NuTest as you wish; (2) give exact copies of the original Shareware version to anyone; and (3) to distribute the Shareware version of the software and documentation in its unmodified form by any means. The only payment allowed to the distributor is for reimbursement of the cost of the copying media and the means of distribution.

Commercial distribution of the Shareware version of NuTest:

Commercial distribution is defined as distribution by a For-Profit organization or by any individual in return for money or any other consideration that is in excess of the distribution cost. You are hereby licensed to: (1) make as many copies of the Shareware version of NuTest as you wish; (2) give exact copies of the original Shareware version to anyone; and (3) to distribute the Shareware version of NuTest in its unmodified form via any means. Commercial distributors must clearly indicate, prior to any sale, that any money received by them is for distribution of the NuTest package and that further fees are payable to the Author if it is used beyond the Evaluation Period.

Clarification of term "Unmodified":

1.) The use of data compression for the purpose of economy of distribution media is permitted so long as the original files are unaltered when the software is processed to make it ready for use.

2.) The conversion of a Non-Shareware (registered) version of NuTest into a Shareware version by removal of a security key file is permitted so long as no other modifications are made and that the registration status is subsequently verified.

Distribution and use of the Non-Shareware (Registered) version:

Duplication of the Non-Shareware (Registered) version shall not be performed for any reason other than for the purpose of making a back-up copy. Under no circumstances shall the Non-Shareware version of NuTest be distributed without the prior written permission of the Author.

Concurrent use of the Non-Shareware (Registered) version:

One registered copy of NuTest may either be used by a single person on one or more computers or by more than one person on the same computer, but at different times. It may not be used in more than one location at the same time. It also may not be shared across a network in a manner which makes concurrent use of the

software possible.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.0, 30 April 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
ObjectProDSP
LBBS - maybe.
Mike Westfall's ttylinkd
Craig Small's ttylinkd
predict, uo11, dove, kepgen - thanks John!
Corrections/Updates:
Copyright changed to GNU GPL version 2.0
```

Removed the Hints/Tricks section and made it the AX25-HOWTO
Removed the SCC, PI, PacketTwin and moved them to AX25-HOWTO
Updated svgaftt - thanks Andrew!
A small fixlet for TNOS on ftp.ucsd.edu
Updated chipmunk home site - thanks John!
Updated TNT to DPTNT

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,

G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page

3.3. Predict

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this

program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net

<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple, yet useful utility that generates Keplerian data files in the NASA 2-line format from data entered through the keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data files in the NASA 2-line format using orbital data entered via the keyboard. kepgen was created out of the need for generating 2-line orbital files from orbital data copied from WA3NAN audio transmissions during Space Shuttle missions. The files created can be read by virtually any satellite tracking or orbital prediction program. kepgen comes pre-compiled (a.out format) with a man page entry for ease of use.

To install kepgen you should use the following commands:

```
# cd /
# tar xvfz kepgen.tgz
```

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net <ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include software for controlling the newer breed of radios, logging programs, QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.2. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.3. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.4. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

- various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

- Simple dialer, to allow connections through AX.25 or NetROM nodes.

- White Pages

- Transient handling of type A (ACK messages).

- SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

- Message filter mechanism

- Field swapping (like SWAPP.SYS in FBB).

- Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of

PacketCluster nodes with some experience on both PacketCluster
and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from
a users' point of view. It allows multitasking and different
priorities for different things.

• The software detects looping DX spots without generating endless
messages. clx filters out such duplicate information. We have
implemented a concept which allows us to connect the network at
multiple points, which would formerly have been called a
"Cluster Loop". clx knows of so-called "active" and "passive"
links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog
programs).

• clx uses modern programming concepts like shared memory for
common data, lex & yacc to implement command language, shared
libraries to keep binaries small (this is still on our wish
list), remote procedure calls for inter process communication.
It is strictly modularized with its own dedicated process for
every major task.

• Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

- The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

- A console monitor to watch ongoing activities
- Speed optimization
- An internal clx protocol
- An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

- 00Index
- clx_200.tgz
- install.clx
- README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-
commercial use, but the authors want to keep track of who is
using their product, so before you can actually use the software
you have to ask for an encrypted callsign string to be placed in
the configuration file. You must send mail to
<clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to
allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. DPTNT Terminal and BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than

the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or

ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG
<http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>
Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.
Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring

of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.
5.12. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@triode.apana.org.au>

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small vk2xlz <csmall@triode.apana.org.au>

5.13. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, <mwestfal@.csci.csusb.edu>

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.14. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, <csmall@triode.apana.org.au>

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and

convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

cd /usr/src
tar xvfz ttylinkd-0.02.tar.gz
cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
make
cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
killall -1 inetd

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0
6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely

redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks. Andrew is working on an X-Motif version to be
released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz>
and sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath, veliaa@rpi.edu

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.8. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.
System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page

<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life

shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture
of the earth onto your X Windows display. It offers either an
orthographic view as you would see from space or the map like
mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson" <tuna@kanchenjunga.lcs.mit.edu>

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?

Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

<terry@perf.no.itg.telecom.com.au>

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

2782. Band Threat -- A Time for Unity

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-05 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4p4bd4$ii5@orion.aoc.nrao.edu>
Source record: 223680
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

By now, we all should realize that the threat to our two most-used bands is real and serious. If anyone can seriously propose to take away 2 meters and 70 centimeters, there is no amateur spectrum anywhere that is safe from their clutches. Therefore, the future of the entire Amateur Radio Service is what is threatened.

In the face of this, let us suspend for the duration our internal quarrels over code/nocode, ARRL/anti-ARRL, etc. We need to focus our energies on fighting this external threat. If you haven't sent your email, FAX or letter about this topic, you should do so immediately. We should remember that, in spite of any differences in opinion, we all are hams and we all are threatened. That fact overwhelms all others in importance right now. Let's take all that energy that otherwise might be spent on posting about other topics and spend it on letters and emails to the IWG-2A and to Congress.

This episode already has illustrated why we need the ARRL. We can disagree over the actions and directions of the League, but the simple fact remains that, without the ARRL, we wouldn't even know about this threat. In this matter, we need the ARRL and the League needs us, both members and non-members.

So, let's unite to preserve our spectrum and save the internal squabbles for some later time. We need the help and energies of all hams focused on the single purpose of fighting off this threat. If we lose this one, we'll have a lot less of a hobby to argue about in the future.

From: jherman@Hawaii.Edu
Message-ID: <DsJs6z.6pn@news.hawaii.edu>
Source record: 223693
Cross-posted to: news.groups,rec.radio.amateur.misc

Jim mentions the name "rec.radio.swap" - talk about a misnamed group!
Swap means to exchange items. There is *very* little exchanging of
radios taking place on there. Over 95% of the traffic consists of
FS (for-sale) and WTB (want-to-buy) articles. Buying or selling
is not equivalent to swapping (unless you include swapping cash
for a radio).

Stephan M. Anderman <sanderman@delphi.com> just cast this into the Electronic Void:

>>Arden, that is exceptional. Cool-headed, reasonable, and a firm statement of
>>facts - exactly what we need to blow this effort right out of the water. I
>>hope others use this letter as an example of what to write and how to write it!
>>Congrats and 73!
>>Stephan Anderman, WA3RKB
>>ARRL Hudson Division Assistant Director
>>ARRL ENY Section Bulletin Manager/PIC
>>Stillwater, NY
>>sanderman@delphi.com

Stephan, you're right: it was a very good letter, and it is admirable that we Amateur Operators are all pulling together to accomplish an end. However, if the threat is as real and serious as the ARRL says it is, why haven't they stepped forward and *really* got the ball rolling on this issue?

You might want to pass along a suggestion to the higher-ups in the ARRL (I would, but I'm not a member - yet). Tell them that they need to hold a press conference immediately! Since you obviously read this forum, I believe you must have seen the post stating that *non*-ham support will be vitally important to the cause. This is absolutely correct, and must be followed up as soon as possible. A press conference doesn't cost anything and will enable the League to tell people
a) That there is a threat to Amateur bands, and
b) Why this would be detrimental to the general public.
It needs to be brief and to-the-point - but then, aren't Amateurs supposed to be able to communicate efficiently? Especially those that we pay dues to in order to represent our interests?

Or, is this just a political flex-our-power-muscles duel of egos between the League and the State Dept.??

If this is for real, tell them they need to take action NOW.

Come on guys, have you ever heard of the concept of "satire"? It
often angers precisely those people who most need to understand the
underlying message. Or perhaps those people get angry precisely
because they *do* get the underlying message, and they don't want
to admit that it strikes a little too close to home.

Perhaps it's time to have another serious discussion
on just what the amateur service is supposed to be about and how
we can continue to justify our frequencies in a rapidly changing
world. But I fear it will just devolve into name-calling. Sigh.

For the record, no, I don't want to see 2m and 70cm turned over to
the LEO operators. But I have to admit that there's more than a
kernel of uncomfortable truth in what everyone has labeled "flame bait".

2809. E-mail links to members of Congress established

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-05 00:00:00 UTC
From: Raymond Sarrio <wb6siv@cyberg8t.com>
Message-ID: <31B4E2A1.3DFC@cyberg8t.com>
Source record: 223757

In an effort to provide all who are deeply concerned about the proposed reallocation of the 2 meter and 70 cm bands to LEO's industry. I have established e-mail links to every member of congress that has an e-mail address. All the links can be reached at http://www.sarrio.com

To be most effective, only e-mail the Representative from your own congressional district and/or Senator from your own state. Make sure you identify yourself and give your street address. By giving your address you will be informing the Representative that you are a constituent. Remember, this is an election year, any Representative that wants to be reelected will not ignore letters from their constituents. Make your letters as brief as possible, and no name calling. FYI, many representatives will only respond by US Postal service, to ensure confidentiality.

I took this step after I read the hostile reponse a fellow Amateur Radio operator reportedly received from the Chairman of the IWG-2a com. The IWG-2a is the subcommittee established by the FCC and State Department to develope a preliminary US policy position for the 1997 ITU conference, WRC-97. If the response reported is true, it would cast considerable doubt on the objectivity of the information gathering process of this particular subcommittee. The FCC and State Department employees that run these committees are not policy makers, they work at the behest of the President and Congress.

Both branches need to be made aware when one of their employees loses objectivity. It is to this end that I have created links to all House members and Senators. They need to know serious doubt is cast on the objectitivy and fairness of their employees.

Please e-mail me if any of my e-mail links do not work. 73's Ray WB6SIV

Yup, and far more places besides. Subject to all the other rules set
forth in CFR 47 Part 97, this is the territorial scope of your license:

S 97.5 Station license required.
(a) The person having physical control of the station apparatus must
have been granted a station license of the type listed in paragraph (b), or
hold an unexpired document of the type listed in paragraph (c), before the
station may transmit on any amateur service frequency from any place that is:
(1) Within 50 km of the Earth's surface and at a place where the
amateur service is regulated by the FCC;
(2) Within 50 km of the Earth's surface and aboard any vessel or craft
that is documented or registered in the United States; or
(3) More than 50 km above the Earth's surface aboard any craft that is
documented or registered in the United States.

Appendix 1--Places Where the Amateur Service is Regulated by the FCC
In ITU Region 2, the amateur service is regulated by the FCC within the
territorial limits of the 50 United States, District of Columbia, Caribbean
Insular areas [Commonwealth of Puerto Rico, United States Virgin Islands
(50 islets and cays) and Navassa Island], and Johnston Island (Islets
East, Johnston, North and Sand) and Midway Island (Islets Eastern and
Sand) in the Pacific Insular areas.
In ITU Region 3, the amateur service is regulated by the FCC within the
Pacific Insular territorial limits of American Samoa (seven islands), Baker
Island, Commonwealth of Northern Mariannas Islands, Guam Island, Howland
Island, Jarvis Island, Kingman Reef, Kure Island, Palmyra Island (more than
50 islets) and Wake Island (Islets Peale, Wake and Wilkes).

P.S. I hope you don't waste your whole vacation shouting into a microphone
in a hotel room :-)

I assume it means the same as any other user of the term "boatanchors" - i.e.
something old whose functionality and usefulness means it is only good for a
"boatanchor" or "doorstop" for landlubbers. Alternatively, anything as big
and heavy as an SG-2000 :-)

Hi Bill

I couldn't agree with your comments more!

I have been into radio since 1957, where I got my feet wet on the
then, brand new chicken band. A couple of years later I became an
Amateur and have been on the air ever since.

Not saying their are not many bad hams out there, their are, but the
evolution of radio and the internet have many things in common and
offer diversity as well.

As far as Amateur Radio, in over 35 years, I have never run out of new
or interesting things to try my hand at, and by self-policing the
airwaves, Amateur's have kept ham radio in the spirit and fun it has
always been.

By our government failing to uphold the numerous laws they keep
enacting and a certain band failing to adhere to the laws or
self-policing within it's own ranks, it has become totally useless as
a viable means of local communication. And in most cases, almost
intolerable to even have on, especially if you have children within
earshot.

You can readily see what happens when the rules are not upheld and
vulgarity is allowed to gain a foothold in the interest of free
speech. Speech is not free by any stretch of the immagination, each
person is accountable for what spews forth from his tongue and he
reaps the rewards or penalties thereof. There are always going to be
those few who ruin everything, not only for everyone else, but for
themselves as well.

50 to 100 mile QSOs were once commonplace on the 11 meter band, then
came all the illegal operators and their linears, now your lucky if 3
miles can be obtained due to the QRM from all the illegal operations.
I wouldn't be surprised if someone's ears don't begin to bleed from

the vulgarities screamed above noise level.

Speech is not Free, if the users of the internet cannot control their own filthy language and government doesn't step in to make the internet usable by all, it will soon be a haven only for those swine who like to wallow in their own filth and vulgarities and it will cease to be the valuable tool that it is rapidly becoming.

There is a time and place for everything, even a place for the swine to wallow in their own filth. The public airwaves as the public areas of the internet are not that place.

An old adage is "Birds of a Feather, Flock Together", so that your right to free speech is not jeapordized, I don't believe in totally eliminating all channels of expression, merely defining it and putting it in it's proper place. If such is done, we can all enjoy our various and particular priviledges in harmony, without insulting each other at every bend in the road.

The internet is a place to be shared by all, in order for speech to be free, it must be accepted by all. When vulgarities and filth prevail, the freedom to use the internet will be restricted only to the swine and freedom is lost by those who do not or cannot accept filth as the common good of all, which, for all intensive purposes is the moral majority.

Although I am not for it, I do see the internet becoming censored in order to preserve itself as a usefull tool. The only way to prevent censorship is to keep things in their proper place and at their proper times, something which most of the swine have not learned to do.

That's my 25 bits worth.

PLEASE don't respond any more to any of Burt's bullshit! He has such
a poor life that he has nothing better to do than toss out flame-bait
like this stuff. He is always complaining that Ham Radio and Hams are
worthless, yet he continues to find time to stick around here and
provide this sort of crap. If everyone on the usenets (and he spams
them all) would just ignore him, perhaps he would go get a life (or at
least leave us alone).

Opinions expressed herein are my own and may not represent those of my employer.

2824. Did UPS ever actually use 220 - 222 MHz?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-05 00:00:00 UTC
From: c_prewitt@emulex.COM
Message-ID: <31B5A08B@msgate.emulex.com>
Source record: 223772

Here is what the FCC says on their WEB page about 220 MHz

220 MHz-RADIO SERVICE

The 220 MHz service is a land mobile radio service that may be used for either commercial or private purposes. The service consists of two hundred 5 kHz paired channels, some of which are licensed on a national basis and some of which are licensed on a "local" basis. One hundred of the two hundred channel pairs are licensed as five-channel trunked systems on a local basis. There are few restrictions as to the type of service that may be provided by these systems. Some people view this service as a potential competitor to PCS, cellular, or wide area SMRs, but the limited channel capacity will hinder its competitiveness unless license consolidations occur in the future.

If you have any comments or questions about this service, please contact Martin Liebman 202/418-1310

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Please note the change for the month of June.
Re-scheduled because of Field Day and Father's Day.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.

<Snip>

Perhaps I have too short a memory... But, to me, to blame the current generations of Germans for WWII and the Holocaust is as senseless as some people today blame current generations of Americans for slavery back in the 19th century.

It just does not add up.

BTW -- My father was wounded badly in WWII and spent two years in an army hospital being repaired.

I tried to get it of the FCC server, but I did not find the relevant files.

> I wonder if the LEO industry guys actually lust for one of the other bands,
> but have included amatuer bands in order to help their cause in some way.
> Perhaps if they had amatuer operators arguing that one of the other
> frequency bands should be used, it would lend them some support for
> acquiring it. Could this be their tactic?

I think, they lust for the ham bands for two reasons:

(a) Low Earth Orbit satellite communications are a well established and
proven technology, thanks to hams

(b) By grabbing the 2 meter and the 70 cm bands, they already have
working satellites in orbit, which those guys will not have to pay
for. If those bands get reallocated, hams will not be allowed to
use the uplink frequencies, and thus not the downlink either. For
only that can come downlink that went up uplink before....

I think, it is a clever and just as much sinister scheme to grab free
breakfasts at the expense of a community, which will waste time by
discussing the seriousness of the threat instead of felxing their muscle.
I dont think, that angry or polite letters to the FCC will help. Go to
the top with you opinion, and tell some guys that you will monitor their
efforts re preservation of the threatened bands, and hint them to your
multiplicator value ... Many Americans do not vote, but should the treat
continue, hinting some top political guys, that you will have all your
elegible family members register and vote, and that you will make it clear
to them which party cares for the citizens and which for the ellbows ...
maybe it will help.

Though I am just a resident alien, and thus not entitled to vote, I can
nevertheless bring either guys some 30plus votes by shamelessly
campaigning in my family. And be sure, I will.

IMHO, everything made by MFJ that I have ever seen is junk. Poor quality components, shoddy assembly, and non-existent quality control. It might seem like a good deal, but it's actually kind of expensive for junk. Spend a bit more and get something decent.

PAD-

I have my IC-706 in the car, with a Hustler HF antenna system attached to a triple magnet-mount on the roof. It happens that the antenna mast resonates on 6 Meters, with no resonator attached. However, I've gotten good signal reports during recent band openings, using a 10 Meter resonator and the AT-180 tuner!

At home, I have the Kenwood TS-690S, connected to a 6 Meter half-wave dipole in the attic. It is tacked to rafters, and sits at about a 45 degree angle. It seems to work OK. A nice beam would be much better, but that would be hard to fit in the space available.

See you on 50.125 USB.

>>> to ruin it for everyone else, then you are just ruining it for yourself!
>>>
>Hi Bill

>I couldn't agree with your comments more!

Come on boys, ham radio didn't 'spawn' the new breed, *America* did.
Not only is ham radio not the same as when you two started 30 years
ago, the United States of Drug Dealers is not the same either. Ham
radio and internet are just a reflection of the state of the American
society, sad as it may be. You don't need internet to find bad
language, go turn on HBO or Cinemax.

Bill, what is there to 'ruin' ? Ham radio isn't a *profession* for
Christ sake, it's just a *hobby*, like knitting, stamp collecting, or
any other hobby. Only difference is that ham radio attracts a lot
more introverts than most hobbies do, you know, basement bound people
that can't look you in the eye when they talk to you. I think in your
day, if you recall, they were classified into three basic groups -
freaks, jerks, and wierdos, if I recall correctly. If you two are
looking to find a group of 'normal' people to share your common
interests, you sure picked the wrong hobby.

Take another swig of Geritol and calm down, you two keep ranting like
this and next thing you know you are gonna pop a blood vessel or ole'
Spew down there in Sunny Florida will come along and start calling you
YE OLD FARTZ. .....

What you see here is not ham radio. It's internet - the information
stupid highway - the biggest waste of technology since packet radio -
a 'twelve lane super highway gridlocked with garbage trucks' as
someone else put it. Some of us _hams_ are just using it as a form of
Radio Fun until the sunspots get their act back together. You two
boys do understand what Radio Fun _is_ , don't ya ?????

73, Jim KH2D

Beams Pete, _big_ beams. But six meters is like ten - when it works,
it really works. Throw a dipole up in a tree and see what you can
hear. But remember, the band is open or it ain't.

3A -[Monaco] Ralf, DL3JSW, who is part of the HB0 team listed below,
will travel here during the week on July 14th. He will try to
obtain a license for both 3A and Seborga.
3Y -[Bouvet] Luis, XE1L, (at the Dayton HamVention) reported that the
South Sandwich Island DX Group (SSIDXG) will be going to Bouvet
sometime in December 1997/January 1998. Naturally, this will be a
full scale operation. Details will be forthcoming.
5V -[Togo] From 3 to 18 June Roy, DL7UBA/5V7HR and Lars, DL7ALM/5V7ML
will be active from Kpalime, Togo. The activity will take place on
all bands in SSB and CW.QSL via their respective homecalls.
6Y -[Jamaica] Theo, PA3ERL, will be active as PA3ERL/6Y5 from June
13-29th. His plans for band activity and operations were not
received.QSL via PA3ERL.
9A -[Croatia] On 7 and 8 June, Vito (9A/I3BQC) Enrico (9A/I3RSP) and
Mario (9A/I3CZM) will be active from Susac island (EU-016).
9M0 -[Malaysia] Jan, SM0OEK is currently in Malaysia, from where is
active as 9M2JJ. He hopes to plan an expedition to Pulau Layang
Layang, in the Spratly islands group.
9N -[Nepal] From 23 to 30 June Brad, KV5V will be in Nepal and he will
try to operate from their stations on 20 and 15 metres CW.
BV -[Taiwan] From 31 May to 2 June BO1/JP1RIW will be active from the
```

Ma-tsu islands (AS-113).QSL via BV2KI.
BV -[Taiwan] The activity of BO0KS from Kin-men island (Quemoy,AS-102)
is now planned from 26 to 29 July. QSL via BV2KI.
C6 -[Bahamas] Robert/K4MQG, William/AA4R and Ted/WA4VCC will be going to
the Grand Bahama Island from June 7-14th. They will be active on 6m,
2m, 432cm and HF.The station will be very active during the ARRL
June VHF Contest, June 8-10th. The Grid Square is FL06 and has not
been on VHF for quite sometime.
CU4_iota-[Azores DFP] June 1-2 , CU4S from LightHouse "Farol da Ponta da
Barca" Ref. FAZ-03 on 80,40 and 20 meters.Also on June 21,22,23
CU4N LightHouse "Farol do Carapacho" Ref. FAZ-04 , 80,40 and 20
meters.QSL via CU4AH
CU7_iota-[Azores DFP] June 8 to 9 , CU7R will be QRV from LightHouse "Farol
da Ribeirinha" Ref. FAZ-17. Last May 25-26 CU7V was QRV from "Farol
do Vale Formoso" Ref. : FAZ-18.
DL_iota -[IOTA 033] Frank , DL2SWW will be QRV from Vesterales - IOTA EU-033
from June 16 to July 7 , 160 to 10 meters. QSL via Homecall.
From June 28 to 30 he will try going to the Lofotes - EU 076.
EA_iota -[Spain] In July EA5IQ will be active from Benidorm island (EU-093
DIE E-007)
EA7_iota-[Spain] The new operation from SANCTI PETRI IS. EU-143 and from
Spanish Is. S-002 (DIE) Will be 8-9/6/96. Activate all bands CW and
SSB. The call is ED7SPI and the team : EA7FR-EA7NO-EA7ESH-EA7PY-
EA7BJ-EA7JB. The QSL Info is EA7PY.
EA9_iota-[Ceuta & Mellila] The new date of the dxpedition to ALBORAN ISLAND,
IOTA AF-042, and S-001 for the Spanish Award Island (DIE), will be
of the 14-16/05/96. Will activate in all bands, SSB and CW.The call
is EG9AI and the QSL manager is EA4URE. Ops: EA7CRL - EA7HDQ - EA7KN
EA7AAW - EA7BFT - EA5KY - EA7JB
F_iota -[France] Didier, F6ELE, and Bertrand, F6HKA will be active from
Molene Island IOTA EU-65 (located in the Bretagne -Finistere West-
Region Group) July 25 to 29th.
GM -[Scotland] In early June GM4FDM, GM3NIG, GM3UTQ, GM4YMA and GM3COB
should be operating (10, 15, 20, 40 and 80 metres) from Monach
islands (EU-111), which were activated for the last time in 1993.
Call is still unknown, but it should be GM5VG/P. QSL via GM3UTQ.
HB0 -[Liechtenstein] From 13 to 20 July F6ELE, F1PNA and F6HKA will be
active with two stations (10-160 metres) from Liechtenstein.
HL_iota -[South Korea] This is to inform you IOTA pedition to Bogil Island
Korea (AS-085). The Hanyang University Amateur Radio Club (HL0C)
plans to operate at Bogil Island, Chunnam Provice, Korea.The island
is in IOTA AS-085 group. The date of operation will be 24 thru 26
of June, 1996. HL0C/4 will be used for callsign, and send QSL card
to HL0C direct or via buro. Please add "Amateur Radio Club, HL0C"
to the cba if you send your QSL card direct.
I -[Italy] From 3 to 6 June Giampiero, IG9/IK4NYV will be active from
Lampedusa island (AF-019,IIA AG-001).QSL via IK4PLC (Gianluca
Vidotto, Via Andreini 30, 40026 Imola-BO).
I -[Italy] From 21 to 23 June Tino (ID9/IT9NGN, QSL via bureau to
G4RRA),Maurizio (ID9/IT9HLN, QSL via bureau), Giovanni (ID9/IT9TZZ,

QSL to P.O.Box 213, 98100 Messina-ME, Italy), Daniela (ID9/IW9ELV,
QSL via direct) and Maurizio (ID9/IT9LQG, QSL via bureau) will
be active from Salina island (IIA ME-015), in the Eolie archipelago
(EU-017). Operations will take place in all modes and on all bands.
I -[Italy] The Salento DX Team plans to activate some island in the
Puglia region, Sant'Andrea isl. di Gallipoli (EU091/IIA LE01
24 June - 9 July), Grande isl. di Porto Cesareo (EU091/IIA LE02
22 July - 10 August, including the IOTA contest).
During later operation it's also possible an activity from
Malva isl.(IIA LE03).QSLs via homecalls
IS0 -[Sardinia] From 29 July to 12 August Roberto, IM0/IK2MRZ will be
active in CW and SSB from Sant'Antioco (EU-024 IIA CA-014) and San
Pietro islands (EU-165 CA-013), and also from other Sardinian
islands valid for the Italian Islands Award. QSL via home call.
IS0_iota-[IOTA EU-165] During August , IM0/IK1TKS from some Islands :
San Pietro (IIA CA-013),Piana (IIA CA-008), Ratti (IIA CA-010) and
Calavinagra (IIA CA-019).
KH5 -[Palmira & Jarvis Isl.] Rumors from Hawaii say that a DX'pedition
to Palmyra KH5 and Kingman Reef, KH5k is on the works, For now the
operators are on the planning fase and facing the first problem,
that is to get the very difficult permission to go to Kingman Reef.
SV -[Greece] From 10 June to 30 August SV1CID and SV1DPL will be active
on 10,15,20,40,80 and 160 metres CW/SSB from Crete (SV9, EU-015),
from Ionian islands (SV8,EU-052), from Euboea (SV1 EU-060) and
from Hydra (SV8 EU-075).QSL via SV1CID (Papastratou 42, Agrinio
30100, Greece).
SV5 -[Dodecanese] From 6 to 20 June Manfred, DL8SET will be active again
from Rhodes. Operations are expected to take place from 6 to 20
metres (WARC probably included) in SSB and CW. QSL via homecall.
V6 -[Micronesia] From 25 to 28 May JE7JRZ will be active in all modes
and all bands as V63NN.He plans to participate in the CQWW WPX CW
Contest. QSL via homecall.
VE_iota -[Canada] VE3NSZ will activate the following Provincial Islands
during period 4-10 June:
PQ007 Ile D'Orleons NA128
PQ011 Expo
PQ019 Grande Ile
PQ023 Nuns/Des Soeurs
PQ026 Ile Bigras
NB004 Lameque NA068
NS008 Outer Hirthe
NS012 Tancook NA081
NS040 Heckmans
NS042 Little Tancook
NS043 Marvins
VK4_iota-[Australia] In early June, Steve Salmon, AA6LF should be active as
VK4ALF from Stanley Island or Howick Island. The IOTA status of the
islands, which should be located in the Queensland State (North
Coast) North group (OC-187), is still to be confirmed.QSL via AA6BB.
VK9 -[Willis Isl.] For anybody who is interested .... VK9WG mentioned

this evening that he will be on 3570 KHz at 1100z on June 3, 1996
... so.... anybody who needs/wants Willis Island on that band and
will have propagation to that part of the world might want to give
it a try. He has been spotted on the OH2BUA Packet cluster on the
28th May on 14260 between 05H30utc and 07H00utc.
VU4 -[Andaman] Well known DXer Jim Smith, VK9NS, who at the HamVention
and SWODXA DX Dinner Bandquet, announced he has received his Indian
license which is valid for 5 years.The W.P.C. were kind enough to
issue him VU2JBS which contains his intials. He also mentioned that
he believe the permit to import the equipment being donated by the
Heard Island DX Association (HIDXA) to Mani, VU2JPS, has now been
mailed to his home on Norfolk Island. Jim stated that he plans to
return to the Andamans in July or August of this year subject to
various factors.
ZK1 -[Cook Isl.] The DXNS report Bruce/AA8U, Stan/K8MJZ and Marilyn/AG8W,
will be active July 11-21st.This time frame will include the IARU
Contest. They will operate from Rarotonga Island as ZK1AAU in the
contest and ZK1MJZ and ZK1AGW outside the contest.There will be an
all bands effort with priority on 160 meter outside the contest.
Cushcraft is sponsoring the operation with antennas and equipment.
This group will not join DX nets or lists and requests full calls
only. QSL to AA8U.
ZK2 -[Niue] From 1 to 4 June Yuu Yoshitani,JA3IG will be active as ZK2YY
from Niue. Usually Yuu is active on 40 and 20 metres CW.

SB DXNEWS @ WW <CT1ENQ $NPDX.019W2
NPDXG Bulletin #19 [2/3]

PACIFIC DXPedition -> Yuu Yoshitani, JA3IG, will be active from three
different islands over the next couple of weeks. Yuu-san will be operating
as follows: May 28-30th as 3D2JA (Fiji), May 30 June 1st as A35IG (Tonga),
June 1-4th as ZK2YY (Niue) and June 5-6th as A35IG (Tonga). Yuu-san likes to
operate mainly 40 and 20 meter CW. Check around 7005 kHz and 14025 kHz.

5A1A ---> On 14 May the DXCC Desk approved all the 5A1A operations. The
activity from Tripoli Radio Club started on 13 July 1995 by a group of
Ukranian amateurs (UT3UX, UT2UA, UT3UY, UX4UMI), who worked until 25 July
(for CWcontacts QSL via LZ2UA: Vlad Vladov, Box 100, 5600 Troyan, Bulgaria;
for SSB QSL via OM3JW: Stefan Horecky, Mnska 2, Stupava, IBV 900 31, Slovak
Republic) About 35,000 QSL are going to be processed and those who have
already sent their requests do not need to send dupes. Those who have
waited for the DXCC Desk's decision before sending their card and/or
donations, can write direct to UT3UY: Anatoly Kirilenko, P.O. Box 494/3,
Kiev-151, 252151 Ukraine. Donations can also be sent to W4BRE.

MOUNT ATHOS ---> The ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), has received a 9 to 7 recommendation from the DX Advisory Committee (DXAC) to make no change in the status of Mount Athos on the ARRL DXCC Countries List. The Awards Committee reported a unanimous vote to MSC in support of the DXAC to make no change at this time. Since the DXAC and the Awards Committee are in agreement in their recommendations to the MSC, the matter is decided.

PALESTINE UPDATE ---> It may be timely to remind DXers of recent operations in Palestine by the JA1UT/JA3UB group, and to give an update on the current status. The JA1UT/JA3UB group has been involved in Palestine since mid-1994 with a United Nations humanitarian aid project, providing and installing VHF radios in ambulances and hospitals.Several visits have been made in pursuit of the project, and two of them included licensed amateur radio operation. A parallel thrust of the project has been to assist the Palestinians where possible to resume amateur radio activities.Training and equipment has been offered for this purpose. The first step in the resumption of amateur radio was made by a short operation of a Palestinian national Dr Sami Tarazi from the Gaza Strip on 2nd December 1994 using the historic call sign ZC6B. The "Al Quds" local newspaper on 5th December 1994 stated that Chairman Arafat had sanctioned the operation and also approved the formation of the Palestinian Wireless Group. The first operation by the JA1UT/JA3UB group took place between 12-20th December 1994 from the Gaza strip, using the call signs: JA1UT/GAZA, JA3UB/GAZA, JK1KHT/GAZA, JO3XEQ/GAZA. The /GAZA suffix was used because Palestine did not hold a currently valid call-sign allocation.A written permit was issued by the Ministry of Telecommunications and Posts.The second operation by this group took place 14-19 May 1995. The call signs used were: JA1UT/ZC6, JA1UPA/ZC6, JA3UB/ZC6, JO3XEQ/ZC6, JO3XER/ZC6, JH7DHS/ZC6, JR0CGJ/ZC6.
A licence was issued by the Ministry of Telecommunications and Posts of the Palestinian Authority. This stipulated the use of the /ZC6 prefix. The Palestine Authority has licensed a number of nationals for amateur radio using the prefix ZC6. By the way, it is the belief of the JA1UT/JA3UB group, that there are precedents within the DXCC Programme, which indicate that the actual callsign used during an operation is not necessarily a critical factor in the determination of "country" accreditation. Meanwhile, JA1UT was informed by the Palestinian Authorities that they would welcome any radio amateurs, from any country which wished to foster friendly relations with Palestine. A copy of the application form written in Arabic language, with an English language translation was given to JA1UT.In view of the complex political situation concerning Palestine, an informal approach was made to a representative of DXAC at the Tokyo Ham Fair August 1995, sounding out the possibility of a DXAC accreditation. It was made very clear to G3NOM and JA1UT that in the personal opinion of the representative, it would be a long time before DXAC could even consider such an application due to the political complexities concerning the autonomy criteria.
The JA1UT/JA3UB group are planning another visit to Palestine in late June/early July 1996.

ZL8RI ---> The QSL manager for Raoul Island, Kermadec islands operations is ZL2HU: Ken Holdom, P.O. Box 56099, Tawa, Wellington, New Zealand.

I'm subscribed to both, and agree.

A little noise doesn't bother me, anyway.

From what I've heard, no one is sitting on the proposal. The person responsible for posting the RFD apparently has a number of proposals in the queue at this time.

: >required the FCC to replace any spectrum we lost. Now, I know they could
: >give us "useless" spectrum, but isn't that what hams have always made
: >valuable by enhancing the radio art?

: My only thought on this. Does the government have a loophole in such
: legislation? 2 meters may not be as threatened as, say, 70cm. Why?
: Amateur is not the "primary" service between 420 and 450. If hams got
: the boot from this UHF band, would the government say they don't have to
: replace it since it was never really ours to begin with?

You will see the 420 - 450 LEO application fall off the table. The U.S.
Air Force is the primary government user. They still have a primary
defence system, pave-paws, operational in this spectrum. They do not want
to share with low earth orbiting spread spectrum users. Their mission is
to detect and classify all low earth orbiting objects.

The amateurs on two meters may have to make a different case. LEO type
spread spectrum mobile satellite communications is already allowed on
136 - 144 and the 148 to 150 bands. LEO is just filling in a gap in
the world wide wrc band plan. Once a wrc plan is in place the individual
countries set their plans.

I just downloaded HamCom 2.0 and need some clarification on the converter schematic. The Bridge circuit to the right of the Op Amp is confusing. I don't know which nodes are connections or not. Does anyone have a better copy or can clarify this part of the circuit?

Also, do I need the PTT input if I'm just going to hook it up to my DX-390 to decode RTTY? What's it for anyway?

2860. ARRL JUNE VHF CONTEST

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-06 00:00:00 UTC
From: LYQV81A@prodigy.com
Message-ID: <4p5mjv$mme@usenetw1.news.prodigy.com>
Source record: 223623

This weekend, June 8-9, 1996 is the ARRL VHF/UHF contest. A group of "High" band operators will operate 6 meters through 223, SSB, CW and FM from Wopsononock Mountain in Grid Square FN00, near Altoona, PA. The elevation is 2847 feet, virtually the highest point toward any where into the mid-west, east, northeast and south. Callsign used will be: W3YOZ. The group of operators will have put up three sixty foot towers with stacks for each band. Work us! we need your contact and, we will have full time FM for those without sideband equipment. We will be LOUD and hope to set a new record for contacts and grid squares from FN00. If you don't know what grid you are in, we will. Please contact us. Operators: W3YOZ of 160 fame; K3ZZ; K3SKE; KC3EK; KA3EJJ; N3CDY; KE3GB. Allare experienced DX and weak signal operators. Get on the Technician's bands this weekend and enjoy the contest. Many Thanks! Glenn Tracey (KC3EK/ BV/ 9M/ VS/ JA/DA/HS/HL/6Y)

From: Dale Carlson <drc@frugal.com>
Message-ID: <31B69FE1.1A23@frugal.com>
Source record: 223630

I'm trying to get an old (1948) Collins 310-B exciter working.
It currently will drift through the entire 40 MB in about 30 minutes. I opened up the PTO and found that the slug was badly cracked, and also the compensation caps are burned, as though they'd touched each other and shorted out.
Seems like the best plan is to replace the unit. It is a 70E-8A PTO, tuning 1600 to 2000 KHZ. Does anybody have one of these lying around? Thanks.

There is only one thing worse than the nazi's, communists and internment governments: A racist people with a supportive government that will lie to you one day then kill you and steal your land the next. Just ask any native north or south american, if you can find one.

I wonder what would have happened if the Souix nation had had nuclear weapons back in 1870?

While no rational person would blame younger Germans for the
holocaust, this comparison between the NAZI holocaust and Japanese
internment is a little absurd. While Japanese people were interred,
they were not enslaved. They were not processed in factories of
death. Their body parts were not used to make lampshades, knife
handles and soap. On the other hand, they were allowed to serve in
the military through which they were the most highly decorated group
in the war. Comparing this to the real holocaust is an insult to Jews
everywhere.

On the other hand, I think that the original spammer's castigation of
the German people, especially the current generation, was unwarranted.
Aside from the Nazi's I see many positives in German culture.

And I'll second his oberservation for the Washington DC area. A friend
and I got curious a few monthes ago and hooked up a service monitor to
the shop antenna. We heard several strong trunk digital control channels
but not much activity. That in itself isn't too surprising since
we were listening after hours. Didn't look at 216-219 much, so I can't
say what there may have been there...

Nope, sorry, I don't subscribe to cable.

The Cleveland area only has a hanful of UHF frequencies to choose
from. I was just merely refering to the number of UHF allocations that
exist versus the number of channels actually used. At one time it was
expected that the entire (air) TV dial would be full of channels but
of course, with cable and satellite TV, that is very improbable now.

Alan, this seems to have gone down the wrong pipe with you. What I meant with it was the "It is not going to happen" statement being totally naive, and that history is full of "they wont happen" things that happened; it was not the holocaust I wanted to compare with, it was more the attitude of unbelieving intentions, reasoning, that it would be too monstrous a thing to do. With bureaucrats there is no such thing as scruples. They have ethics replaced by rules and rulings.

^^^^
>May 96 69.7 5.6 p8.8 7.2 7.8 0
^^^^

The April monthly average 10.7cm flux value should be 69.3 while
the May average should be 70.1. The two values given in the IPS
report are incorrect. Admittedly the reason for the error doesn't
rest entirely with IPS; from mid-April until late May the daily
flux report from DRAO (Penticton) contained an unfortunate error.
The nature of the error was that the flux value had been truncated
instead of being rounded to the nearest integer number. On average
this resulted in an average deviation of -0.5 flux units from the
correct value.

>FS (for-sale) and WTB (want-to-buy) articles. Buying or selling
>is not equivalent to swapping (unless you include swapping cash
>for a radio).

Just as a reset on this issue: I had proposed (not formally; it never
got that far) the name rec.radio.amateur.forsale, as .forsale is an
accepted name within usenet. Others suggested that .marketplace might
be a better term, because it better covered the domain of buying,
selling and trading than .swap or .forsale. To me, this seemed to be a
much better argument than than the one against "boatanchors."

I suppose the .swap name came from the concept of a global swapmeet.
After all, we still call them "swapmeets," but we know that money is
often exchanged as well.

This entire discussion evolved from a bunch of wholesale flaming of a
few misguided folks who posted FS: or WTB: on this newsgroup, and the
flaming was happening *on the newsgroup!* After much heated and
rational debate, the whole thing stopped as suddenly as it had started.
I haven't heard much of the flaming since, and the FS: and WTB: posts
still occur in .misc.

When I recently added this Netcruiser account with Netcom to my shell
account that I've had for a few years, I noticed that
rec.radio.amateur.swap was among the newsgroups available for
subscription. But, when I tried to subscribe, a message came back that
the group was non-existent. I don't know if this was a bogus group
that never got rmgrouped, and Support at Netcom hasn't answered the
questions that I posed about a week ago.

>compare efficiency or reliability wise.
....

This was all true prior to the introduction of "cookbook" chips by
Linear Technology, National, and Maxim.

Just as the introduction of three terminal regulators greatly
simplified linear regulator design, so have the LT1x7x, LM254x, and
max???. Have taken the black art out of switching regulators. Each
month brings nesws of another chip intended to make this task easier.

Off-line wsitchers ARE complex, but DC-DC, non-isolated, buck or boost
regulators needn't be. It is actually much easier to get good
performance and high effiency in a non-isolated regulator.

I am assuming all voltages less than ~ 50V, and power levels < 100W.
Beyontd this rough envelope things get, well, interesting!

DO use one of the recent switcher chips...trying this with discreet
components IS a can of worms!

I've lost count of how many of these I've done. They won't tolerate
sloppy grounding technique, 60Hz diodes, or undersized, high ESR caps.
But neither is it black magic . (don't tell my boss!)

The last one used outboard MOSFETs and runs at nearly 95% measured
efficiency converting 5V to 3.3V @ 12A., with full over current
protection , remote voltage sensing, and +/- .1V regulation for
0-100-0% load transients. It uses 1"x3.5" of board space, and is but
5" tall. At full output, the surface mounted FETS are still cool
enough to touch. This design was simply "cookbooked" from a LTC
application note.

>Hope this helps a bit. Maybe someone else could suggest some good
>switcher books for plans etc.

National sells a "Simple Switcher" evaluation kit that comes with PC
board, inductor, and Schottkey diode. Just add a couple caps and
resistors, and you are in business.

The absolute best resource for this is Linear Technology's AN19 "LT1070 design manual" by Carl Nelson. He goes over common topologys & theory, and then gets down to implimenting and troubleshooting implimentations using the '1070. More recent app notes go into more exotic applications, but AN19 is by far the best starting place. It is in the 1990 Linear Applications Handbook.

Unfortunately, LT data, and application books are not cumulative, so no engineers will be throwing them away every couple of years.

Digi-Key stocks the parts, but I don't know where a hobbiest might lay hands on the app notes. Mouser handles J.W.Miller powdered iron inductors sutable for these switcher (but you lose maybe 3-5% effiency over molly-permaloy cores)

Finally, in your solar panel application, you need to beware the negitive input impedance of any switching regulator. They will all draw MORE current as PVarray voltage drops, causing PV voltage to drop more. This can cause you to "latch up" or oscillate under some conditions. Soft start ing the regulator will help a lot, but you gott have enough PV to run the load, plus switcher losses.

You could make a circuit that will pull down the LT1070 Vcomp pin when array voltage drops below some point, alleviating this problem, at the expense of reduced output voltage from the regulator. (assumes your ultimate load does not have switching supply!)

2889. Wrc97 Comment p□rocedures

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-06 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <834062691.AA06551@hamlink.mn.org>
Source record: 223702

PROCEDURES FOR SUBMITTING COMMENTS TO THE WRC-97 ADVISORY COMMITTEE
-
-
On March 14, 1996, the Commission released Public Notice (No. 61997) (Streamlining Notice), that announced its new streamlined World Radiocommunication Conference (WRC) preparatory process. Under this new process, formal Notice of Inquiry (NOI) proceedings are eliminated in favor of developing WRC proposals in the Commission's WRC-97 Advisory Committee. This removes the redundancy that was inherent in our previous "NOI-WRC Advisory Committee" process and enables the United States to respond more effectively to the rapidly evolving international environment and to the ITU's new two-year WRC schedule.
-
The Streamlining Notice included general guidelines for submission of public comments to the Advisory Committee. The Notice stated that procedures would be developed to ensure that members of the public continue to have full opportunity to participate in the development of WRC proposals under the new streamlined process, including those parties who do not attend meetings of the Advisory Committee and IWGs.
-
Since the release of the Streamlining Notice, we have gained experience with our new process. We now provide these procedures for submitting comments to the Advisory Committee.
-
Comments on Ongoing Advisory Committee Matters: Parties that wish to comment on the ongoing deliberations of the Advisory Committee and its IWGs may do so at any time.
-
Comments on Preliminary Proposals: As announced in the Streamlining Notice, preliminary WRC proposals developed by the Advisory Committee will be released by the Commission in periodic Public Notices. These Public Notices will allow an opportunity for public comment and will provide the appropriate procedures, such as filing deadlines, to be followed.
-
In either case, parties wishing their comments to be considered directly by the appropriate Advisory Committee group and to become part of the Advisory Committee's public record should submit their comments in writing to Office of

the Secretary, Federal Communications Commission, Washington, D.C. 20554, or by e-mail at "wrc97@fcc.gov." Commenters are requested to file an original plus one copy.
-
The comment should reference the Advisory Committee public record file number, "Reference No. ISP-96-005" and the appropriate Advisory Committee Informal Working Group, if known, in which their submission should be considered. The FCC staff will ensure that comments filed are considered in the appropriate groups.
n - - - - -
n Note from forwarder:
n The Informal Working Group for little LEOs is IWG2a.
n - - - -
For the most expeditious and efficient consideration of their comments, parties should refrain from filing comments directly with the Chair of the WRC-97 Advisory Committee, with the Chairs and Vice-Chairs of the Informal Working Groups, with individual FCC staff members or private sector participants in the Advisory Committee process.
-
For additional information, contact Cecily C. Holiday, Federal Officer of the WRC-97 Advisory Committee, or Damon C. Ladson, Alternate Federal Officer at (202) 418-0749, or consult the WRC-97 Homepage on the Internet (http://www.fcc.gov/ib/wrc97/).

I am a recently licensed No Code Tech. I have been reading the many Ham Radio News groups and Mailing lists. I have seen so many posts concerning the Code/No code debate and now about the recent threat to the 2m and 70 cm bands. My question is what are the license requirements and ham bands of other countries? I realize a "knowledge" of Morse Code is required to operate on HF frequencies, per International Treaty. However the debate could be what is "knowledge of code." Do all the other countries require 5, 13 or 20wpm and at different stages like the U.S.? Do all the other nations have six different levels of licenses? What about bands? Do all nations have a 2m Ham band and other VHF/UHF bands? I do know that Japan has a lot of No Code Hams.

I think our license requirement should be basically in line with other nations. If they only require 5 wpm then that is all the U.S. FCC should require. I am not for or against the code, in fact I am trying to learn it for my Tech plus and General tickets. However, I do not think we should have to jump threw any more loops then other Hams in different countries.

I hope to see responses from Hams outside the U.S. on their countries license requirements and what bands them are allowed to use.

Andrew C Robertson (AA1HX)wrote:

> Burt, YOU are a joke. Therefore, your opinion means nothing.

Well, I really hate to side with one who is so despised but I do think he has somewhat of a point there.

Oh, s#$t, here come the flames.

Really, though, would the world be such a terrible place without RACES or ARES? I know, I know. I'm bad - I'm ignoring the millions of people who's lives have been saved by amateur radio. I'm not disputing that - I've used the autopatch to call in road accidents, too.

But really, is the existance of amateur radio so critical to public safety? If all we have to support our claim to the use of billions of dollars worth of rf spectrum is the old "emergency communications" crutch then we are all in trouble. Today's communications infastructure is complete, diverse and efficiant. We just aren't needed that badly anymore.

Maybe that is why the FCC gets so irritated with us? All we do is Bitch, squabble, whine, break rules and insist we are important because we provide a "critical" service to the public safety.

We need to make ourselves needed or else the FCC will just blow us off and sell our (our?) bands away.

Source record: 223706

Dear fellow radio fans,

The best way to get a quality house is to build your own.

Same thing applies to tuners. Common sense rules here. How could MFJ possibly sell a GOOD 3kw tuner for the price they are asking? Something has to give.

The GOOD stuff always seems expensive at first, but cheap sh*t is ALWAYS just cheap sh*t. Never gets any better and does not improve with age!

BTW, seems like someone from MFJ should jump right in on this thread and sort of come to their own defence.

>It still doesn't answer my question of how do I address traffic
>destined for a non-amateur in Australia.

1. print it out
2. tuck it in an envelope
3. mail it to the addressee

It'll get there faster, and amortizing the cost of all the radio equipment
that would otherwise be involved, much much more cheaply.

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/doc/hamualr/callsign.html

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee

if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.
Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT

PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;

FEDERAL COMMUNICATIONS COMMISSION

Washington, DC 20554

June 5, 1996

Mr. David Sumner
Executive Vice President
The American Radio Relay League, Inc
225 Main Street
Newington, CT 06111

Dear Mr. Sumner:

In recent days, over 1000 members of the Amateur Radio community have contacted me regarding the upcoming 1997 World Radiocommunication Conference in Geneva and expressed strong concern that U.S. proposals will impact adversely on spectrum allocated for Amateur bands. My purpose in writing to you is to respond to these concerns and to provide you with additional information regarding the WRC-97 preparatory process and its relation to existing services.

Many of the comments I received have focused on a list of "candidate" frequency bands discussed at the May 7 meeting of the WRC-97 Industry Advisory Working Committee Informal Working Group 2A (IWG-2A). The comments suggest that the Amateur Radio Service Bands, specifically the 144-148 and 420-450 MHz bands, have been targeted as a source of spectrum for future Mobile Satellite Service (MSS) operations.

First, I want to assure the amateur radio community that no amateur bands have been selected for reallocation. The list of bands generated on May 7th represent only the IWG-2A's initial efforts to study spectrum use below 1 GHz in order to assess the feasibility of proposing world-wide MSS allocations in that range. Before recommending preliminary proposals for consideration by the Commission, IWG-2A participants must first conduct sharing studies among a range of services using frequencies below 1 GHz. These studies are necessary in order to determine the feasibility of sharing between services, and whether recommending any specific frequency band will be fruitful.

Second, the bands listed reflect only the initial component of a long-term effort to conduct sharing studies before submitting the Committee's proposals to the Commission for review. We intend to conduct sharing studies in bands currently occupied by government and non-government users. In any case, I want to emphasize that the survey on spectrum use is an international matter which involves all frequencies below 1 GHz.

Finally, the current WRC-97 preparatory process, as in years past, operates under a Congressional statute designed to encourage maximum participation by all interested parties. Therefore, all written and electronic comments received at the Commission to date by Amateur Radio operators have been included as part of the public record on WRC-97 proceedings. However, in the interest of efficiency, we have created a designated FCC office and e-mail site to channel future WRC-97 comments directly to the WRC-97 Committee Chairs. I have included our latest Public Notice outlining these changes and urge you to share it with your members.

I appreciate the many valuable contributions the amateur radio community has made to the progress of radio technology and to ensuring the safety of the American public. I look forward to working with you so that we can continue to advance the use of exciting telecommunications technology both in the U.S. and abroad.

Sincerely,

Cecily C. Holiday
Director, WRC-97 Preparatory Team

==========

FCC Public Notice: Procedures for Submitting Comments to the WRC-97 Advisory Committee

June 6, 1996

On March 14, 1996, the Commission released Public Notice (No. 61997) (Streamlining Notice), that announced its new streamlined World Radiocommunication Conference (WRC) preparatory process. Under this new process, formal Notice of Inquiry (NOI) proceedings are eliminated in favor of developing WRC proposals in the Commission's WRC-97 Advisory Committee. This removes the redundancy that was inherent in our previous "NOI-WRC Advisory Committee" process and enables the United States to respond more effectively to the rapidly evolving international environment and to the ITU's new two-year WRC schedule.

The Streamlining Notice included general guidelines for submission of public comments to the Advisory Committee. The Notice stated that procedures would be developed to ensure that members of the public continue to have full opportunity to participate in the development of WRC proposals under the new streamlined process, including those parties who do not attend meetings of the Advisory Committee and IWGs.

Since the release of the Streamlining Notice, we have gained experience with our new process. We now provide these procedures for submitting

comments to the Advisory Committee.

Comments on Ongoing Advisory Committee Matters: Parties that wish to comment on the ongoing deliberations of the Advisory Committee and its IWGs may do so at any time.

Comments on Preliminary Proposals: As announced in the Streamlining Notice, preliminary WRC proposals developed by the Advisory Committee will be released by the Commission in periodic Public Notices. These Public Notices will allow an opportunity for public comment and will provide the appropriate procedures, such as filing deadlines, to be followed.

In either case, parties wishing their comments to be considered directly by the appropriate Advisory Committee group and to become part of the Advisory Committee's public record should submit their comments in writing to Office of the Secretary, Federal Communications Commission, Washington, D.C. 20554, or by e-mail at "wrc97@fcc.gov." Commenters are requested to file an original plus one copy.

The comment should reference the Advisory Committee public record file number, "Reference No. ISP-96-005" and the appropriate Advisory Committee Informal Working Group, if known, in which their submission should be considered. The FCC staff will ensure that comments filed are considered in the appropriate groups.

For the most expeditious and efficient consideration of their comments, parties should refrain from filing comments directly with the Chair of the WRC-97 Advisory Committee, with the Chairs and Vice-Chairs of the Informal Working Groups, with individual FCC staff members or private sector participants in the Advisory Committee process.

For additional information, contact Cecily C. Holiday, Federal Officer of the WRC-97 Advisory Committee, or Damon C. Ladson, Alternate Federal Officer at (202) 418-0749, or consult the WRC-97 Homepage on the Internet (http://www.fcc.gov/ib/wrc97/).

reparation

1. The act or process of repairing or the condition of being repaired.
2. The act or process of making amends; expiation.
3. Something done or paid to compensate or make amends.
4. reparations. Compensation or remuneration required from a
defeated nation as indemnity for damage or injury during a war.

Reparation implies recompense given to one who has suffered injury, harm,
or wrong at the hands of another:

The ARRL Letter
Electronic Update
June 7, 1996

---------------------------------

IN THIS UPDATE:

* Deluge of comments on 2-meter/70-cm threat!
* Ariane 5 rocket failure could affect Phase 3D
* First vanity call signs issued
* N4T commemorates Tennessee bicentennial
* FCC closes monitoring stations, field offices
* Scanner charges dropped against KY ham
* Apparent repeat offender nabbed on West Coast
* Quiet sun
* FD in space
* QRP-ARCI FDIM papers available
* Courage HANDI-HAM's Sister Alverna recovering
* Megan A. Fox, KB5WBX, SK
```

* Dorothea M. Seaver, W4QBY, SK
* In Brief: Eastern VHF/UHF confab set;
5A1A okay for DXCC; DXCC Desk report;
ARRL Web hits top one million

COMMENT DELUGE FOLLOWS 2-METER/70-CM BAND THREAT

Hams have responded in force to defend the 2-meter and 70-cm bands against a threat from the Mobile Satellite Service (MSS). Over the past week, hams have directed more than 1000 comments by letter, e-mail, telephone and fax to representatives on Informal Working Group 2A (IWG-2A), which is preparing draft US proposals for the 1997 World Radiocommunication Conference. The IWG-2A's list of "candidate bands" for low-earth-orbit mobile satellites ("little LEOs") includes the 144 and 420-MHz bands, among others suggested for consideration. Little LEOs are intended mainly to offer commercial paging and other low-data-rate messaging services.

The list of candidate bands was submitted by little LEO industry representatives at a May 7 IWG-2A meeting. ARRL Technical Relations Manager Paul Rinaldo, W4RI, was present and objected strongly to the inclusion of these two bands. He was told that objections should be submitted in written comments, and the ARRL did so on May 15. Despite the objections, the two ham bands remained on the table, prompting ARRL Executive Vice President David Sumner, K1ZZ, to issue a call to actions in his July 1996 QST editorial. The editorial--circulated far and wide by e-mail and packet radio--generated so many responses that the FCC has had to modify its procedures to cope with the deluge!

Instead of directing comments to the individuals listed in the pre-press version of Sumner's editorial, the Commission's new procedures ask that comments by e-mail be sent to: wrc97@fcc.gov. Written comments, with an original plus one copy, should be sent to: Office of the Secretary, Federal Communications Commission, Washington, DC 20554. Each comment should include at the top, "Reference No. ISP-96-005" and "Advisory Committee Informal Working Group 2A." The FCC staff assures us that comments will be given prompt consideration.

Again, for the most expeditious and efficient consideration of your comments, the FCC asks that amateurs not send comments directly to the chair of the WRC-97 Advisory Committee, to the chairs and vice-chairs of the Informal Working Groups, to individual FCC staff members or to private-sector participants in the Advisory Committee process. Spread the word about this new commenting procedure.

In the wake of the deluge of comments directed to individuals, Chairman of the Industry Advisory Committee Scott B. Harris asked Sumner in a June 5 fax to call off the campaign and accused the League of unfairly targeting private-industry representatives on the committee. "The tactic ARRL has chosen to use in this process in neither necessary nor appropriate," Harris wrote. Sumner suggested Harris was misinformed about the ARRL's intentions to educate its membership. "The League has participated actively in the IAC,

IWG-2A, and other IWGs as appropriate, and will continue to do so," Sumner responded. "Our 'campaign' is not to 'protest' the work being conducted in IWG-2A. Rather, it is an educational campaign." (The complete text of both letters is available on the ARRL Web Page, http://www.arrl.org.)

In a June 5 letter to Sumner, the FCC's Cecily C. Holiday--who's director of the WRC-97 Preparatory Team--expressed assurances to the Amateur Radio community that "no amateur bands have been selected for reallocation." She said the list of bands generated at the IWG-2A's May 7 meeting "represent only the IWG-2A's initial efforts to study spectrum use below 1 GHz in order to assess the feasibility of proposing world-wide MSS allocations in that range." She called the proposals "only the initial component of a long-term effort to conduct sharing studies before submitting the Committee's proposals to the Commission for review."

Holiday said that, before recommending preliminary proposals for consideration by the Commission, IWG-2A participants "must first conduct sharing studies among a range of services using frequencies below 1 GHz" to find out if it's feasible to share among services and to recommend specific frequency bands.

Holiday said that all written and electronic comments from Amateur Radio operators received at the Commission have been included as part of the public record on WRC-97.
For additional information, contact Cecily C. Holiday, Federal Officer of the WRC-97 Advisory Committee, or Damon C. Ladson, Alternate Federal Officer at 202-418-0749, or consult the WRC-97 Homepage on the World Wide Web at http://www.fcc.gov/ib/wrc97/.

Remember: Do comment. But be civil. Don't abuse people who are simply doing their jobs.

ARIANE 5 FAILURE COULD AFFECT PHASE 3D LAUNCH

The spectacular failure of an Ariane 5 launch vehicle--the same type of rocket that's scheduled to carry the Phase 3D satellite aloft later this year--may have an impact on the Phase 3D program. The rocket, on its maiden operational test, had to be destroyed June 4 by ground-based command 40 seconds into the flight at an altitude of about 12,000 feet (4,000 meters) when it appeared to be veering off course. The launch was from the European Space Agency's Kourou launch facility in French Guiana, South America. Ariane 501 carried a group of four scientific satellites known as "Cluster" which were destroyed as well. No Amateur Radio satellites were aboard.

The AMSAT Phase 3D spacecraft, now under construction, is manifested on the second flight of the Ariane 5 series (Ariane 502) which, according to ESA's latest schedule, is to be launched in October of this year. AMSAT officials say it's too early to know what effect the Ariane 501 failure will have on the 502 schedule, the possible Phase 3D launch date, or the vehicle on which it will ride. But they did not rule out a schedule that extends beyond the re-entry of AO-13 into the Earth's atmosphere.

AMSAT-DL President Karl Meinzer, DJ4ZC, and AMSAT-NA President Bill Tynan, W3XO, expressed their sadness on hearing the news. In a joint statement they said, "We at AMSAT have enjoyed a mutually beneficial relationship with ESA for over 15 years, and we are, quite naturally, distressed to hear of this unfortunate occurrence." They noted that except for the RS and Fuji satellites, all successful Amateur Radio satellite launches since the early 1980s have been on Ariane vehicles. Both men expressed confidence that the ESA team will overcome this setback and develop a successful launch vehicle. DJ4ZC and W3XO said they stand together in anticipating a successful launch of Phase 3D on a future Ariane mission.--AMSAT News Service

FIRST VANITY CALL SIGNS ISSUED!

The FCC has issued the first call signs under the new vanity call sign program. Gate 1, which permits licensees to get back former individual or club call signs or the former call sign of a deceased close relative, opened May 31, 1996.

Among the first out of the gate were Mark Mandelkern, K5AM (ex-KN5S); Ronald Allen, W3OR (ex-AA3NF); John Webster, W6RM (ex-WA6L); Frank Eldredge, W7GGR (ex-N7BRG); Charles Coldwell Jr, WB5CTQ (ex-KC5EBG); John Santucci Jr, WB9JVM (ex-WD4FMN); Signe Twardowski, W3IIJ (ex KC7QFI); Wendell Davis, W1HSO (ex-N1GJW); and Ernest Evans, W8RWS (ex-N8ELO). The FCC also issued club station call signs K2HE, K0USA and WA7MNW.

The FCC reports it received more than 350 first-day applications. But 85 applications were filed too early and were returned to applicants for timely resubmittal. Gate 1 remains open for applications indefinitely. The FCC has not yet announced opening dates for the other filing gates.

1x1 CALL SIGN N4T ISSUED FOR TENNESSEE BICENTENNIAL

The Amateur Radio display at the Bicentennial Mall in Nashville, Tennessee, will include special event station N4T, in observance of the 200th anniversary of Tennessee's statehood. The FCC has authorized the use of N4T through June 30, 1996.

The station licensee and control operator is Ron Quednau, N4GHU, of Nolensville, Tennessee. The special event call sign was granted May 31 by the office of FCC Private Wireless Division Chief Robert H. McNamara.

N4GHU reports N4T operations are mostly on evenings and weekends, and operating hours are "very flexible," since the station is relying on guest operators. N4T is equipped for HF on CW (80, 40 and 20 meters) and has done some satellite work, too.

A commemorative QSL card signed by Tennessee Governor Don Sundquist will be issued for contacts. It also bears Sundquist's message: "Let Tennessee Amateur Radio commemorate our Bicentennial with this QSL card."

FCC CLOSES MONITORING STATIONS, FIELD OFFICES

As part of a previously announced restructuring of its Compliance and Information Bureau, the FCC has closed 12 HF spectrum monitoring stations and six district offices, effective May 29.

The monitoring stations shut down were in Belfast, Maine; Powder Springs, Georgia; Vero Beach, Florida; San Juan, Puerto Rico; Allegan, Michigan; Kingsville, Texas, Grand Island, Nebraska; Anchorage, Alaska; Douglas, Arizona; Livermore, California, Honolulu, Hawaii; and Ferndale, Washington.

District offices closed were in Buffalo, New York; Norfolk, Virginia; Miami, Florida; Houston, Texas; Portland, Oregon; and St Paul (Maplewood), Minnesota.

The FCC says "a downsized professional staff" will remain in Buffalo, Norfolk, Miami, Houston, Portland, St Paul, Anchorage, Honolulu and San Juan.

The FCC is replacing its HF monitoring stations with "advanced, automated equipment" that will remotely control monitoring sites from an operations center in Maryland. The FCC also plans to install a nationwide toll-free call center, and service is scheduled to begin on a regional basis this month. Until the nationwide toll-free service is available, the FCC says people may call one of the remaining district offices for assistance. Here's a list of service facilities for localities where FCC offices have been closed:

* Allegan, Michigan: Detroit District Office, 810-471-5924.
* Anchorage, Alaska; Ferndale, Washington; Portland, Oregon: Seattle District Office, 206-821-9037.
* Belfast, Maine: Boston District Office, 617-770-4023.
* Douglas, Arizona: San Diego District Office, 619-467-0549.
* Grand Island, Nebraska; Norfolk, Virginia: Kansas City District Office, 816-353-3773.
* Honolulu, Hawaii; Livermore, California: San Francisco District Office, 510-732-9046.
* Houston, Texas; Kingsville, Texas: Dallas District Office, 214-235-3369.
* Miami, Florida; San Juan, Puerto Rico; Vero Beach, Florida: Tampa District Office, 813-348-1508.
* Powder Springs, Georgia: Atlanta District Office, 770-279-4621.
* St Paul, Minnesota: Chicago District Office, 847-298-5401.

Individuals needing FCC forms or other documents should call the FCC's Forms Distribution Center at 800-418-3676.--FCC

SCANNER CHARGE DROPPED AGAINST KENTUCKY TEEN

A judge has dismissed a charge of carrying a scanner that can receive police frequencies that was filed against a 16-year-old Kentucky ham, Greg Godsey, KF4BDY. Godsey, of Hopkinsville, Kentucky, was arrested May 11 by local police, who confiscated his Radio Shack HTX-202 2-meter transceiver. Greg's radio has since been returned to him. Other charges not specifically related to his Amateur Radio activity are pending against the youth. They have been continued until later this month. His parents, Gary and Fredericka Godsey, say Greg has never been in trouble, and they have hired an attorney.

Greg, who had been the ARES EC for Christian County, Kentucky, and only became a ham last summer, was detained by Hopkinsville Police May 11. Greg had steadfastly denied the charges, noting that his radio was not modified

and cannot receive or transmit outside of the 2-meter band. He resigned as EC after his radio was confiscated. ARRL Regulatory Information Branch Supervisor Norman Bliss, WA1CCQ, says the Kentucky law exempts equipment possessed by a licensed Amateur Radio operator that is capable of receiving police frequencies.

APPARENT REPEAT OFFENDER NABBED ON WEST COAST

"The Phantom" has struck again on the West Coast. Bobby Lee Aguero, KE6VNU, of Rocklin, California--who's said to have identified himself as "The Phantom" while interfering with police calls--now faces additional state charges of interfering with a police officer in the performance of his duties. Roseville, California, Police Detective Mike Menz, ex-WD6DMP, reports that Aguero, 18, was caught April 17 "essentially red-handed," while interfering with police calls there. But that's not all. Menz confirmed that similar charges against Aguero are pending as a result of another incident early this month in Seaside, Oregon, where he's alleged to have interfered with both police and fire calls.

Reports say Aguero was using an H-T to interfere with police calls while standing on a motel balcony during the weekend of the ARRL Northwestern Division Convention in Seaside. Other hams are said to have helped police nab Aguero, who was detained and released.

In early January, Aguero was arrested on similar charges in California after police allege he interfered with law enforcement radio communication systems in Sacramento County and Roseville, California. During that interference, dispatches from Roseville Police turned up on Sacramento County Sheriff's Department radios, and vice versa, said Jeff Haggard, WB6DKX, the Sacramento County Sheriff's Department communications systems manager.

Menz said a "misfiling" by the local district attorney's office had delayed prosecution on the January charges, but now, authorities plan to pursue prosecution on both the January and April incidents. Menz said Aguero faces "at least two counts" of interfering in California and could get up to one year in jail on each count. He said local agencies also might try to bring Federal charges. No serious problems resulted from the interference, authorities said.

Menz said Aguero has been released in his own recognizance on the California charges, but he cannot have a scanner or radio transmitter in his possession. "If I catch him with a radio right now, he goes to jail immediately," Menz said. He reports "numerous hams" have called to complain about Aguero's activities. The California case is set for a July court date. To prepare, Menz said he's working his way through several hours of tape-recorded evidence.

SOLAR FORECAST: QUIET

Solar prognosticator Tad Cook, KT7H, in Seattle, Washington, reports there were no visible sunspots for the period May 24-29, and solar flux was down a couple of points. Expect very quiet conditions to continue, with very little solar activity. On or about Saturday, June 8, a slightly rising solar flux

should peak just above 70, and then fall below 70 after the middle of June.

The most disturbed days over the next month are predicted to be around June 9 and 10, but with a predicted A index of only 12, so a major storm is not expected. This is a result of disturbed areas observed during the last solar rotation coming back into view.

Sunspot numbers for May 23 through 29 were 12, 0, 0, 0, 0, 0 and 0, respectively, with a mean of 1.7. The 10.7-cm flux was 67.2, 67.2, 66.9, 66.9, 66.6, 66, and 66.5, respectively, with a mean of 66.8.

FIELD DAY IN SPACE?

During this year's ARRL Field Day June 22-23, some SAREX activities will take place on shuttle mission STS-78, set to launch June 20. NASA Payload Commander Susan Helms, KC7NHZ; Mission Specialist Charles Brady, N4BQW; and Payload Specialist Robert Thirsk, VA3CSA; hope to find free time to hand out points from the shuttle to Field Day ops. The crew will use separate receive and transmit frequencies:

* FM voice downlink (worldwide): 145.55 MHz
* FM voice uplink: 144.91, 144.93, 144.95, 144.97 and 144.99 MHz
* FM voice uplink (Europe only): 144.70, 144.75 and 144.80 MHz
* FM packet downlink: 145.55 MHz
* FM packet uplink: 144.49 MHz

QRP-ARCI "FOUR DAYS IN MAY" TECHNICAL PAPERS AVAILABLE

The QRP Amateur Radio Club International is offering its Technical Papers from its Four Days in May (FDIM) forum held in Dayton, Ohio, May16-19, in conjunction with the Dayton Hamvention. FDIM Technical Editor Bruce Muscolino, W6TOY, says the complete set is available from him for $20, postpaid, via surface mail. It includes the full texts of all papers presented except those of George Dobbs, G3RJV, and Dick Szakonyi, WA3ZOW, whose topics were too broad. Bruce says the book includes outlines of the Dobbs and Szakonyi papers instead.

Bruce says the FDIM concept was hatched by Bob Gobrick, WA6DRB/VO1ERB, and himself. The QRP-ARCI expected about 25 attendees at this year's program and got four times as many. The club plans to make FDIM an annual event at Dayton.

The FDIM Technical Papers book contains 11 presentations, including "Considerations in Receiver Design" (D. Szakonyi, WA3ZOW); "Coils, Linear Loads and Capacity Hats: An Overview of Small Loaded Yagis" (L.B. Cebik, W4RNL); and "Direct Conversion Receivers" (Bill Kelsey, N8ET). To order your copy, send $20 to Bruce Muscolino, W6TOY, PO Box 9333, Silver Spring, MD 20916-9333.

COURAGE HANDI-HAM's SISTER ALVERNA O'LAUGHLIN, WA0SGJ, INJURED

Courage HANDI-HAM Educational Coordinator Sister Alverna O'Laughlin, WA0SGJ, is recovering from injuries received May 31 in an automobile accident in southern Minnesota. Sister Alverna, the 1988 ARRL International Humanitarian

award recipient, was on her way to the ARRL Dakota/Midwest Divisions Convention in South Sioux City, Nebraska, when the mishap occurred. She suffered a badly broken leg and other less-serious injuries and had to undergo surgery. It's expected she'll have to wear a cast for several months.

Sister Alverna, a Franciscan nun, will recuperate at Assisi Heights, her order's motherhouse. She's reported to be in good spirits. Cards and letters (no telephone calls, please) are welcome to Sr Alverna O'Laughlin, Assisi Heights, Third Floor Health Care, Rochester, MN 55903.

Sister Alverna received the 1988 International Humanitarian Award in recognition of her dedication to helping people with disabilities and through service to the community. An article about Sister Alverna appeared in the January 1990 QST on page 53.

MEGAN A. FOX, KB5WBX, SK

Megan Alyssa Fox, KB5WBX, of Royal Oak, Maryland, and Austin, Texas, died June 3, 1996, of AIDS. She was 11 years old. Megan was born with AIDS, which also claimed the life of her mother, Carol Harper Fox, infected during a transfusion. Megan was a strong advocate of AIDS awareness and had traveled throughout the United States and Canada with her father, Allan "Jay" Fox IV, N5LKJ, telling their story.

Her father and adoptive mother, Jeanne Hanrahan Fox; sister, Kathleen Morris; brother, Brad Morris, KA3YAN, and other relatives survive. Services were June 6 in St Michaels, Maryland. (For more information on Megan and Jay Fox, point your World Wide Web browser to http://www.bluecrab.org/members/jfox/index.htm.)

DOROTHEA M. SEAVER, W4QBY, SK

Dorothea M. "Dee" Seaver, W4QBY, of Ft Lauderdale, Florida, died May 10, 1996. She was 99 years old. A native of Brooklyn, New York, she became interested in ham radio in 1945 when her son, William, then a ham, went off to college, and she wanted to stay in touch with him. She was active in several nets, earned DXCC, and was a member of QCWA.

In Brief:

* The 22nd annual Eastern VHF/UHF Conference is set for August 23-25 at the Quality Inn and Conference Center, 51 Hartford Tpke (Rte 83), Vernon, CT. The event commences with a hospitality suite Friday, August 23, at 4 PM. Registration, formal conference activities and the banquet start Saturday, August 24, at 8 AM. A swapfest is Sunday, August 25. Registration by mail is $20; at the door, $25 (banquet tickets are additional). For registration information, contact Rae Bristol, K1LXD, 328 Mark Dr, Coventry, CT 06238, tel 860-742-8650. For swapfest information, contact Mark Casey, N1LZC, 303 Main St, Hampden, MA 01036, tel 413-566-2445. The conference still seeks speakers. Those interested should contact Conference Chairman Stan Hilinski,

KA1ZE, 17 Pilgrim Dr, Tolland, CT 06084, tel 860-649-3258 (W) or 860-872-6197 (H).

* FCC Wireless Telecommunications Bureau Deputy Chief Ralph A. Haller, N4RH, has announced he's retiring. Haller, 48, has spent 25 years with the FCC, including eight years as head of the Private Radio Bureau. He lives in Arlington, Virginia.

* DXCC approval has been given for 5A1A operations from Libya that were conducted by Ukrainian and Libyan nationals.

* The ARRL DXCC Desk reports the number of unprocessed applications at the end of May 1996 was 139 (13,424 QSLs). The desk got 431 applications (32,402 QSLs) for endorsements and new awards during May. Applications being sent out at month's end were received about a week earlier. A few applications received before that were awaiting conversion from paper records or were being audited.

* It's official! ARRL Web, the ARRL HQ World Wide Web site has gone over the one million "hit" mark for 1996. (A "hit" is a request for a file from the server by a viewer.) The site currently gets as many as 10,000 hits daily on weekdays and has been seeing more than 13,000 a day since the 2-meter/70-cm band threat issue arose!--Jon Bloom, KE3Z

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Electronic edition circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, KX4V, e-mail rlindquist@arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

2901. Band Threat -- A Time for Unity

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-06 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <960606195617236@atdbbs.com>
Source record: 223714

>>By now, we all should realize that the threat to our two most-used
>>bands is real and serious.

Not according to the FCC...

"First, I want to assure the amateur radio community that no amateur bands have been selected for reallocation. The list of bands generated on May 7th represent only the IWG-2A's initial efforts to study spectrum use below 1 GHz in order to assess the feasibility of proposing world-wide MSS allocations in that range. Before recommending preliminary proposals for consideration by the Commission, IWG-2A participants must first conduct sharing studies among a range of services using frequencies below 1 GHz. These studies are necessary in order to determine the feasibility of sharing between services, and whether recommending any specific frequency band will be fruitful."

Sincerely
s/ Cecily C. Holiday
Director, WRC-97 Preparatory Team

Public Notice - June 6, 1996

PROCEDURES FOR SUBMITTING COMMENTS TO THE WRC-97 ADVISORY COMMITTEE

On March 14, 1996, the Committee released Public Notice (No. 61997) (Streamling Notice), that announced its new streamlined World Radiocommunications Conference (WRC) preparatory process. Under this new process, formal Notice of Inquiry (NOI) proceedings are eliminated in favor
of developing WRC proposals in the Commission's WRC-97 Advisory Comnmittee.
This removes the redundancy that was inherent in our previous "NOI-WRC Advisory Committee" process and enables the United States to respond more effectively to the rapidly evolving international environment and to the ITU's new two-year WRC schedule.

The Streamling Notice included general guidelines for submission of public
comments to the Advisory Committee. The Notice states that procedures would
be developed to ensure that members of the public continue to have full opportunity to participate in the development of WRC proposals under the new
streamlined process, including those parties who do not attend meetings

of
the Advisory Committee and IWGs.

Since the release of the Streamlining Notice, we have gained experience with
our new process. We now provide these procedures for submitting comments to
the Advisory Committee.

* Comments on Ongoing Advisory Committee Matters: Parties who wish to comment on the ongoing deliberations of the Advisory Committee and its IWGs
may do so at any time.

* Comments on Preliminary Proposals: As announced in the Streamlining Notice, preliminary WRC proposals developed by the Advisory Committee will
be released by the Commission in periodic Public Notices. These Public Notices will allow an opportunity for public comment and will provide the appropriate procedures, such as filing deadlines, to be followed.

In either case, parties wishing their comments to be considered directly by
the appropriate Advisory Conmmittee group and to become part of the Advisory
Committee's public record should submit their comments in writing to Office
of the Secretary, Federal Communications Commission, Washington, DC 20554,
or by e-mail at "wrc97@fcc.gov." Commenters are requested to file an original plus one copy.

The comment should reference the Advisiory Committee public record file number "Reference No. ISP-96-005" and the appropriate Advisory Committee Informal Working Group, if known, in which their submission should be considered. The FCC staff will ensure that comments filed are considered in
the appropriate groups.

For the most expeditious and efficient consideration of their comments, parties should refrain from filing comments directly with the Chair of the
WRC-97 Advisory committee, with the Chairs and Vice Chairs of the Informal
Worling Groups, with individual FCC staff members or private sector participants in the Advisory Committee process.

Federal Communications Commission
Washington, DC
International Bureau
Satellite and Radiocommunication Division
Room 500, 2000 M Street, N.W.
Washington, DC 20554

June 5, 1996

...First, I want to assure the amateur radio community that no
amateur bands have been selected for reallocation. The list of bands
generated on May 7th represent only the IWG-2A's initial efforts to
study spectrum use below 1 GHz in order to assess the feasibility of
proposing world-wide MSS allocations in that range. Before recommending
preliminary proposals for consideration by the Commission, IWG-2A
participants must first conduct sharing studies among a range of
services using frequencies below 1 GHz. These studies are necessary in
order to determine the feasibility of sharing between services, and
whether recommending any specific frequency band will be fruitful."

Sincerely
s/ Cecily C. Holiday
Director, WRC-97 Preparatory Team

Dio,
Not sure about the phone number, but they advertise in QST every month, a little 1/2 by 1" ad, sometimes hard to find... It's worth the trouble to find them. I've been using one for about 3 years and still love it! There is a new version with a few improvements and 6 memories instead of 4. I think it's ten more bux. Go for it, you'll like it. It only took me about an hour to build.

AmSoft announces the June 1996 release of its CD-ROM "The World of
Ham Radio". This CD-ROM contains the World's largest collection
of amateur radio, electronic, and engineering software, plus the
most recent FCC amateur radio license database available on CD-ROM.
The current FCC database includes calls issued up to 22 April 1996.
This software collection is the best available anywhere in the World
for electronics, engineering, and the hobby of Amateur Radio. Over
20,000 files and programs for the hobbyist or professional. Stop
by our WWW SITE: http://hamster.ivey.uwo.ca:80/~amsoft/ and see.

At $19.00 plus $4.00 Shipping anywhere in the World AmSoft has the
lowest price for any CD-ROM offering these services.

No, it's not the effectiveness of the letters that prompted this action.

This just means that you have overflowed the recipients' e-mail inbasket quotas/limits sufficiently that they want to divert the e-mail traffic elsewhere.

ARLB037 2m/70cm/WRC update

Hams respond to band threat with flood of comments, FCC sets up central comment address

Hams have responded in force to defend the 2-meter and 70-cm bands against a threat from the Mobile Satellite Service (MSS). Over the past week, hams have directed more than 1000 comments by letter, e-mail, telephone and fax to representatives on Informal Working Group 2A (IWG-2A), which is preparing draft US proposals for the 1997 World Radiocommunication Conference. The IWG-2A's list of ''candidate bands'' for low-earth orbit mobile satellites (''little LEOs'') includes the 144 and 420 MHz bands, among others suggested for consideration. Little LEOs are intended mainly to offer commercial paging and other low-data-rate messaging services.

The list of candidate bands was submitted by little LEO industry representatives at a May 7 IWG-2A meeting. ARRL Technical Relations Manager Paul Rinaldo, W4RI, was present and objected strongly to the inclusion of these two bands. He was told that objections should be submitted in written comments, and the ARRL did so on May 15. Despite the objections, the two ham bands remained on the table, prompting ARRL Executive Vice President David Sumner, K1ZZ, to issue a call to action in his July 1996 QST editorial. The editorial--circulated far and wide by e-mail and packet radio--generated so many responses that the FCC has had to modify its procedures to cope with the deluge.

Instead of directing comments to the list of individuals distributed in an earlier bulletin and included in the pre-press version of K1ZZ's editorial, send comments by e-mail to wrc97fcc.gov. Send written comments--an original plus one copy--to Office of the Secretary, Federal Communications Commission, Washington, DC 20554. Each comment should include at the top, ''Reference No. ISP-96-005''

and ''Advisory Committee Informal Working Group 2A.'' The FCC staff says comments will be given prompt consideration. All written and electronic comments from Amateur Radio operators received at the Commission have been included as part of the public record on WRC-97.

Again, for the most expeditious and efficient consideration of your comments, the FCC asks amateurs to not send comments directly to the chair of the WRC-97 Advisory Committee, to the chairs and vice-chairs of the Informal Working Groups, to individual FCC staff members or to private-sector participants in the Advisory Committee process. Spread the word about this new commenting procedure.

The ARRL Web Site has complete information on the band threat situation at http://www.arrl.org/ and will update the information to reflect further developments.

ARLD028 DX news

This week's bulletin was made possible with info provided by Mauro, I1JQJ, Jean Michel, F6AJA, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

SRI LANKA, 4S. 4S7EA was active on 80, 20 and 15 meter SSB over the weekend. On 15, try 21250 kHz around 1130z, on 20 try 14190 at 1515 and 0140, and on 80 try 3799 at 1920. QSL via 4S7EA. Mario, HB9BRM, will sign 4S7BRG June 7 to September 2. He will operate between 14270 and 14320 kHz on 20, and between 21210 and 21260 kHz on 15, both bands around 1300z. On 40, try between 7045 and 7070 kHz, and 80 between 3790 and 3800 kHz from 1900 to 2100z. QSL via HB9BRM.

ZAMBIA, 9J. Hans, KN6DI, will be active for one to three months, probably as 9J2DI. He will operate SSB only. QSL via AA6BB.

MALTA, 9H. Listen for Heinz, DL6MDG, June 7 to 20 as 9H3SS, mainly on SSB. QSL via DL6MDG. From July 22 to August 9 listen for 9H3UD by DL8OBC and 9H3UF by DL4OCL operating from Gozo Island, IOTA EU-023. They will operate mostly CW on 80 through 10 meters. QSL via their home calls.

NEPAL, 9N. Brad, KV5V, will be in Nepal June 23 to 30 and try to get on the air from 9N1ARB and 9N1RHM. 9N1RHM is frequently found around 14200 kHz between 0100 and 0230z. QSL via KV5V. Kyoko, 9N1KY, will be active until July.

CYPRUS, 5B. Michael, DL5MX, will sign 5B4/DL5MX July 18 to August 1 on 160 through 10 meters.

BURUNDI, 9U. Peter, ON6TT, has been on the air operating 9U5CW. He was primarily on 160 and 80 meter CW between 2230 and 0300z. Also

check 20 and 17 meters CW, SSB and RTTY.

TAJIKISTAN, EY. Prefix hunters take note. Nodir, EY8MM, is planning to be on the air as EY8MM/9 June 9. While scoping out a good 160 meter contest location, he will get on 18 MHz with a temporary 2 element quad. QSL to EY8MM via the EY bureau or direct.

CLIPPERTON ISLAND, FO. DXpedition organizer Jay, WA2FIJ, continues efforts to secure one or more boats for transportation to and from Clipperton during the February/March 1997 operation. Commitments for transportation are needed before vessel approval, landing permission and a license can be obtained.

TROMELIN ISLAND, FR/T. In July FR5ZQ should start several weeks of activity on both CW and SSB.

ITALY, I. With recent trans-Atlantic openings on 6 meters, listen for I8TWK/8 operating from rare grid square JM79 through June 10 on 50.152 MHz SSB and CW, 144.100 MHz meteor scatter, and 144.300 MHz tropo.

UK SPECIAL CONTEST CALLS. The IARU Championship will be the debut for certain British club stations to use special 1 by 1 and 2 by 1 call signs, starting with either G or M.

CHAGOS ISLANDS, VQ9. Last chance to work Ron, VQ9DX, as he leaves Diego Garcia June 11. QSL via AA5DX, Ron Marra, Marginal 301-C, La Rambla, Suite 205, Ponce PR 00731.

THIS WEEKEND ON THE RADIO. Complete rules for the ARRL June VHF QSO Party appear on page 102 of May QST. For info on the Asia-Pacific Sprint, Portugal Day, WW South America CW Contest and TOEC WW Grid Contest, see page 99 in June QST.

2913. Re: Did UPS ever actually use 220 - 222 MHz?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-06 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4p86u2$ifj@newsbf02.news.aol.com>
Source record: 223726

Back to the original question (see the subject line), I don't think so. I attended a digital wireless conference in Boston several years ago, and UPS was one of the key presenters there.

They stated something to the effect that since they could not successfully get the 220 MHz band to work for their needs, they abandonded it and went to cell-phone modems.

Hi Dave, I sure hope a ham from Singapore is on this newsgroup, for
once you see the "hoops" perspective hams there have to jump through
you'll be thankful our "hoops" are easy to sail through.

From what I recall, to go from one license class to another you have to
submit your log to the authorities. Your station has to be inspected.
There is a limited list of radio models you can operate. You
are only permitted crystal-control on 2m. There is up to a one year wait
from the time you take your test to the time the license arrives. There
are various code speeds you have to pass depending upon which license
you desire.

Daniel Wee, a Singapore ham active on the QRP list a couple years ago,
told me all about their "hoops". During the one year wait for his
license he was able to build quite a large number of radios - really
became a great technician (in the classical sense).

Ron,

The "Times Microwave Coaxial Handbook" says:

RG-389
Inner Conductor: 0.2500 in. BC Al.
Dielectric: PE Spline
Nom. DOD: 0.635
Sheilding (number/type): 2/SC
Jacket material: PE-IIIA
Nom. OD: 0.875 in.
Weight: 0.366 lbs/Ft.
Nom. Impedance: 50.0 Ohms
Attenuation @ 400 Mhz: 1.5 dB/100Ft.
Nom. Capacitance: 22.8 pf/Ft.
Operating Temp. Range: -55 to +80 C.
Max. Operating Voltage: 2000

Notes: Low loss version of RG-189/U

Hope this helps a bit.

Yeah,

And the club running the fest gets a bad rap in the paper, or gets prosecuted
for being the proivider. (they run the fest).

Then the publicity makes ALL amateurs look bad.

No, I think the correct method is to deal with it at the club level.

As far as I can tell, the threat to 2m and 70cm not at a stage yet
where it is serious. I'm starting to believe we (i.e., amateurs
ready to shoot mail messages off without a little thought) are a
much more real threat to ourselves than the Little LEO folks.

[...]

>fact remains that, without the ARRL, we wouldn't even know about this
>threat. In this matter, we need the ARRL and the League needs us,
>both members and non-members.

Actually, while I'm generally an ARRL supporter, I've come to
believe that the ARRL acted improperly in the little LEO matter,
probably generating some ill will that will take a long time to
settle down.

If the ARRL wanted to positively influence the FCC and State
Department, a mail-bombing campaign is the wrong idea. Perhaps
a special address at the ARRL to collect messages, then printed
out by the ARRL and delivered to the correct people in paper form,
would have been more generally effective.

Slow down, Jeff! Could you please tell me what evidence has caused you
to conclude that some folks are "freebanding" on the trans-oceanic
air-to-ground channels? Is this in reference to the one note several
years ago on rec.radio.cb where a European said he'd heard that
pirates were using these frequencies? Have you actually ever heard
a pirate on the trans-oceanic aircraft frequencies yourself?

================================================================================
The Baltimore Radio Amateur Television Society will hold their annual
Field Day at the Baltimore County Fire/Rescue Academy Training Center
on York Road, just inside the I-695 Beltway at Exit 26 in Towson, MD.

The event begins at 2:00 pm. on Saturday June 22nd., and goes
continously until Sunday June 23d. at 2:00 pm. Amateur radio
operators are also invited to assist in the setup beginning at
8:00 am. on Saturday morning and after the event on Sunday afternoon.

Field Day is a conglomeration of a contest, an emergency
preparedness exercise (all operation is via generator or battery
power) and a public relations event to help publicize ham radio.
Please plan to join us and operate at least some of the time
between Saturday afternoon and Sunday afternoon. Plan to bring your
family and friends as well, and expose them to ham radio. (Licensed
operators will be on hand to assist them.)

Refreshments will be provided.

For more information, contact the BRATS at (410) 467-4634
home page: http://www.smart.net/~brats
e-mail: brats@smart.net

REMINDER: Enter only from York Road....and please don't park in an
unauthorized parking space. Talk-in is available on 2 meters-amateur
radio 147.63/03.

2924. State Dept. Letter About Band Threat

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4p9eh2$lns@orion.aoc.nrao.edu>
Source record: 223502

If you read the State Department letter carefully, you will note that, despite its soothing tone, it contains absolutely no assurances whatsoever about our bands. Instead, it confirms that our bands will continue to be studied for reallocation and/or sharing.

The main purpose of the letter seems to be to redirect our email traffic to a site where it can conveniently be ignored.

In the absence of any assurances that our bands will be removed from consideration, it would seem to be wise to continue to send our letters and email directly to the IWG-2A committee members, as well as to the official repository. They must feel the heat.

In addition, we should continue to write to Congress and the White House about this matter. Some of the heat then can come from the committee members' superiors.

Here is a summary of news items covered on edition #167 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 14-Jun:
-
1. Hams Jump to Defend Threatened Bands, FCC Deluged with Comments
2. PA Ham Gets Arrogant Response from State Department Official
3. Vanity Call Signs Being Issued by FCC, Several Rejected
4. Special Event Call Sign Issued for Tennessee Bicentennial
5. Ariane 501 Destroyed by Ground Controllers at 12,000 Feet
6. Scanner Charges Dropped Against 16-Year-Old Kentucky Amateur
7. FCC Closes Monitoring Offices, New Facility Nearly Complete
8. Ralph Haller, N4RH, Resigns from FCC
9. DXCC Desk Reports May Backlog, Approves Libyan 5A1A Operation
10. New British 1x1 and 2x1 Club Call Signs Debut Next Month
11. Weekly Propagation Forecast with George Bowen, N2LQS
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. Courage HandiHams' Sister Alverna Injured in Auto Accident
14. Megan Fox, KB5WBX, SK at Age 11, Victim of Inherited AIDS
15. "Dee" Seaver, W4QBY, SK at Age 99, Active in DXCC and Nets
16. "The RAIN Dial-up" from Chicago
17. Special Event Station Calendar
18. "Amateur Radio Newsline" - Edition #982 from Los Angeles
19. FCC Investigates Action Against "888" Phone Entrepreneurs
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (EDT) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Negotiations for the
donation or lease of satellite space continue in earnest. When a
new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.
All affiliates are requested to contact the producers for further
information.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB,

at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Hell Rider <Scott9@usa.pipeline.com> wrote:

>1. What is the proper way to identify yourself in CW & Phone after the 10
>minute mark has passed?

CW: "<call of person you're in QSO with> DE KH2PZ" (or just "DE KH2PZ")
Phone: "<call of person you're in QSO with> THIS IS KH2PX" (or just "THIS
IS KH2PZ" or just "KH2PZ").

>2. What are the proper steps to take if you are ever on the air when S.O.S.
>or MAYDAY is broadcasted?

While working at Coast Guard Radio Honolulu, here is what I would have to ask:
1. Exact location (the first and foremost item to ask)
2. Nature of distress
3. What assistance is needed
4. Number of people involved, and each person's condition
5. Complete discription of vessel (or vehicle or aircraft or...)
(and a number of other questions only applicable for a ship/boat/aircraft
in trouble)

If it were a ship in distress you'd have the unpleasant duty to remind the
operator to close the switch on his hand key prior to him abandoning ship
(so his transmitter would then then act as a radio beacon for rescue ships
and aircraft to home in on. When a ship goes down the transmitter emits
almost a scream as the radio room floods with sea water... You'll *never*
forget such a sound. I still hear it in my dreams sometimes).

>3. What are some good HAM magazines and where can you buy them?

The best is QST, published by the American Radio Relay League (ARRL) for
over 75 years now. The ARRL has been our representative in almost all
matters concerning amateur radio for that many years. Please consider
joining; the benefits you receive as a member are just too numerous
to mention. But you can still read the magazine if you're not a member;
it's available at news stands and libraries.

>4. Can you skip licences?

The requirements for each grade of license are cummulative; if you want
to *first* sit for the Extra, you'd have to pass all the elements for the
lower grades in addition for those needed just for the Extra.

It might have been that you were the 500th caller that day, and the previous 499 said all sorts of irrational things in a hostile manner. Given that many folks today cannot vocalize their thoughts very clearly (every sentence begins with "It's like...", or "You know...") they tend to get frustrated and their speech becomes fragmented, occasionally sprinkled with offensive remarks.

How polite were you to the gentleman at the State Department? In situations such as this it's important to begin a conversation with "I'm very sorry to trouble you sir, but ..." You want to use the title "sir" frequently (even though inside you have visions of strangling him)!

Jeff KH2PZ / KH6

ARLP023 Propagation de KT7H

ZCZC AP44
QST de W1AW
Propagation Forecast Bulletin 23 ARLP023
From Tad Cook, KT7H
Seattle, WA June 7, 1996
To all radio amateurs

SB PROP ARL ARLP023
ARLP023 Propagation de KT7H

There is very little solar activity to report. There was an 8 day run of no visible sunspots at the end of May, but activity has picked up slightly since then. Average solar flux is up about two points from last week's bulletin.

Solar flux should peak in the short term around 72 on June 9 and 10, and then drop down below 70 after June 14. It isn't expected to rise above 70 until after the first of next month. Geomagnetic conditions are quiet, but some moderate unsettled conditions are forecast for June 9 thru 13 and 16 and 17.

Propagation on the upper bands remains depressed. As we move toward Summer 160 and 80 meters are getting noisier. Check 30 and 40 meters during the night for worldwide propagation and 20 meters during the day.

Sunspot Numbers for May 30 through June 5 were 0, 0, 11, 11, 13, 23 and 28, with a mean of 12.3. 10.7 cm flux was 66.5, 68, 68.5, 68.2, 69.1, 69.2, and 70.7, with a mean of 68.6.

Source record: 223549

In all of the brouhaha, one thing that I haven't yet seen is what service the Little LEOs plan to put on their proposed satellite mobile land service band that they eventually get. (I don't mean to sound cynical, but money buys bands. Remember 220 MHz!)

I can't see it being voice - cell-phones seem to have that locked up. Pagers seem to have as much bandwidth as they need, unless the objective is to provide a really wide-area paging service. However, I suspect something digital in nature.

Does anybody have the inside track on this? The real answer, not just random speculation.

But speaking of speculating, I saw in a trade magazine that IBM announced at COMDEX a new "wireless Internet" device. Things that make you go hmmm...

There is a good brief article in the June issue of Computer Shopper (pg. 589) ref. the LEO system. It would use a constellation of 840 (!) satts to blanket the earth using something similar to cellular techniques to hand off users - Teledesic (the company developing this stuff) estimates the following throughput for each satt - 18k simultaneous voice channels, 18 simultaneous T-1 channels, or any combination of these depending on usage. Impressive - but is everyone gonna give up their cellphones, pagers, PDA's to use this technology? And, yes, what about IBM's wireless , not to mention Motorola's Iridium system? Huge bandwidth for how many users? And what happens to the 2300mhz PCS systems (just barely in service here in the US, but widespread in Europe).

As for bands to plunder, what about the feds at 225-400 Mhz, TV channels 70-83 (share with trunked/cellular), plus the spectrum from 1200-2000mhz (share with other satellites, radiolocation, etc.) - leo satts would work fine in any of these - but not very well at 144 or 440 mhz due to propagation problems.

Just some more thoughts...

Mike N0JAS
mikemiller@dsmnet.com

2934. GB2RS News 9th June 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <834164266snx@llondel.demon.co.uk>
Source record: 223552
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 9th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

An editorial in the July edition of the ARRL's QST magazine requests US amateurs to help to defend the 2 metre and 70 centimetre bands. According to the editorial, written by the ARRL Executive Vice President Dave Sumner, K1ZZ, bands at 144 to 148 and 420 to 450MHz had been included in a list of possible additional frequency allocations for so-called "little LEOs", or low-earth-orbit mobile satellites. The RSGB is following developments closely to ensure that there are no proposals which could affect UK amateur allocations, and ARRL have informed us that this is "strictly a USA domestic matter". They believe that nothing should come out of the proposal which will merit concern.

The Irish national society, the IRTS, has donated 250 pounds to the Phase 3D satellite fund. According to AMSAT-UK, the failure of the Ariane rocket launched from French Guyana on the 4th of June is unlikely to have any effect on the eventual launch date of the Phase 3D satellite.

The Radiocommunications Agency informs us that repeater and beacon licensing is back on course again following the bombing at their Docklands headquarters. The RA apologises to those who have been kept waiting, but say that the repeater and beacon papers were amongst the last items to be retrieved from the South Quay building after the bombing.

RSGB Headquarters at Potters Bar will be open next Saturday, the 15th of June, between 10.00 am and 4.00 pm. The bookshop and GB3RS shack will be available to visitors, as will the National Amateur Radio Museum and Library. Morse tests are also available on demand between 11.00 am and 12.30 pm, but don't forget to bring two passport-size photographs and the appropriate fee with you.

Would listeners to the 80 metre GB2RS broadcast at 0900 from the station of G4ARZ please note that because of continuing difficulties with continental interference, this broadcast will move to 3640kHz next month. The last broadcast on 3650kHz will be on Sunday the 30th of June. We wish to express our thanks to the newsreaders who have attempted to provide the service on the original frequency in the face of severe difficulties. It is at their request that this change has been made.

As announced previously, a new 80 metre newsreader is required to take over from GI3TLT at 1030 local time. Unless a volunteer can be found,

this service will cease with the 22nd of June broadcast. Contact Ian Kyle, GI8AYZ, the GB2RS Manager, whose address and telephone number can be found in the "At Your Service" pages in RadCom.

From Sunday the 16th of June, the Tyne/Tees area GB2RS 2 metre FM broadcast will be at 9.00am instead of 10.00am. This broadcast, from the station of G0IID, has G4OLK as the first reserve newsreader, and is on 2 metres channel S21.

A group of American amateurs are going to attempt to win the Brendan Trophies during the ARRL Field Day weekend of the 22nd and 23rd of June. The Brendan Trophies will be awarded to the first amateurs who can prove a two-way trans-Atlantic contact in the 2 metre band. Full details were given in the June 1995 RadCom. The Americans' station will be set up at Kitty Hawk, North Carolina, in grid square FM26. They plan to operate a beacon on 144.175MHz from Thursday the 20th of June. They will also be operating on 6 metre SSB during the Field Day weekend. For further details, contact Peter Underhill, KD4RGD. His E-mail address is kd4rgd@vnet.net.

Now some items of HF DX news from the weekly RSGB DX News Sheet:

From Italy, II1ARI is active during the first three weekends in June to celebrate the 50th anniversary of the Italian national society's Turin section. II1ARI will be active on SSB, CW and RTTY and the QSL information is via I1JQJ.

From Jamaica, PA3ERL will sign PA3ERL/6Y5 from Thursday the 13th of June until the 29th of June.

And from Malta, DL4VCR is active as 9H3II from now until the 21st of June, with emphasis on 160 metres.

Now news of a special event station:

From Turkey, YM12HCS is on the air from the European side of Istanbul, and YM22HCS from the Asian side of the city, on the occasion of the Habitat City Summit. This United Nations conference on human settlement is taking place between the 3rd and 14th of June.

Next the Rally News:

The 27th Elvaston Castle National Radio Rally takes place at Elvaston Castle Country Park near Derby today, Sunday, the 9th of June. The event, organised by the Nunsfield House Amateur Radio Group, features over 150 traders, a flea market for private vendors only, and plenty of attractions for the rest of the family. Talk-in by GB2ECR is on 2 metres channel S22 and on 70 centimetres, channel SU22.

The Aldershot Amateur Radio Rally takes place today, the 9th, at Badshot Lea Sea Cadets HQ, Lower Weybourne Lane, Badshot Lea, near Aldershot. Doors open at 10.00am.

On Saturday the 15th of June, the Royal Naval Amateur Radio Society mobile rally takes place at HMS Collingwood, between Fareham and Lee-on-the-Solent. The event features an RSGB bookstall and membership information stand. Doors open at 12.30pm and for further details telephone 01705 379265.

The Newbury and District Amateur Radio Society boot sale takes place at Acland Hall and Recreation Field in Cold Ash near Newbury next Sunday, the 16th of June. Talk-in will be on 2 metres channel S22 and further details can be obtained by calling 01488 682814.

The Newport Amateur Radio Society junk sale will take place next Sunday, the 16th, at Brynglas Community Education Centre, Brynglas Road in Newport. Doors open at 10.30am and talk-in will be on 2 metres channel S22. For further details, ring 01633 661998.

The Denby Dale Amateur Radio Society annual rally takes place at Shelley High School, Huddersfield Road, Skelmanthorpe in West Yorkshire next Sunday, the 16th of June. For details, telephone 01484 861782.

And the Barford Rally is also on Sunday the 16th. For details, ring 01953 607594.

Now for the HF contest news:

There are two contests taking place tomorrow and Tuesday. The Portugal Day contest takes place on SSB for the 24 hours of Monday the 10th of June. And the World Wide South America CW contest runs from 1200UTC on Monday the 10th until 1800 on Tuesday the 11th. Brief rules are in the June RadCom.

Next weekend, the 15th and 16th, the All Asian DX CW Contest takes place for 48 hours from Zero Hours UTC on Saturday. Brief rules are on page 25 of the June RadCom.

Next some VHF contest news:

The 70MHz CW Contest takes place today, Sunday, the 9th of June, between 0900 and 1200 UTC. The rules are in the September 95 RadCom.

Next Sunday, the 16th, the Second 144MHz "Backpackers" Contest takes place between 0900 and 1300 UTC. The rules are in the September 1995 RadCom.

And now the solar factual data for the period from the 27th of May to the 2nd of June, compiled by Neil Clarke, G0CAS:

First this week we start with the news of a trans-Atlantic opening on 50MHz. On the 28th, between 1851 and 2038 UTC, Don Kirby, GW0PLP, in Cardigan, West Wales, worked numerous Canadian and American stations. He was using 100 watts to a vertical antenna. In Darlington, County Durham, Clive Davies, G4FVP, who also caught the opening, reported that VE1RAA worked a string of Maltese stations.

Solar flux levels remained steady and averaged 67 units. The 90-day solar flux average on the 2nd was 70 units. The X-Ray flux remained at A1 throughout. Geomagnetic activity was mostly "unsettled", but the 28th and the 1st were "quiet", with an Ap index of 5 units. The average was Ap 8 units. Bartel's rotation number 2224 started yesterday the 8th of June.

Now the ionospheric data for Central France for the period from the 24th to the 30th of May. Levels varied from 5.5MHz on the 28th to 7.7MHz on the 30th, with an average of 6.6MHz. Darkness hour lows increased from 2.5MHz on the 24th to 3.2MHz on the 28th, and averaged 2.8MHz. The daytime highs took place between 1900 and 2200 every day except on the 26th, when they were at 1200. The darkness hour lows took place between 0300 and 0400 every day. Over the period 17 hours of blanketing E took place with 6 consecutive hours on the 24th.

And lastly the solar forecast. The active side of the sun is expected to be rotating away, therefore solar flux levels are expected to decline to the high 60s. Geomagnetic activity is expected to be at "unsettled" levels most of the time. Ionospheric MUFs are expected to be about 19MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 11MHz. Sporadic E can be expected on any day, with trans-Atlantic openings on 50MHz possible. The Arieted meteor shower is at its peak and lasts till the 11th of June.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Echo and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

>
>What did I miss here? I must have one or more facts wrong....

I don't know if there is more to this that we don't know, but my experience
is that if you are looking for logic in the creation or interpretation of this
nation's laws, you are looking in the wrong place.

There are thousands of documented cases of where judges are WAY out
of bounds and CLEARLY in violation of multiple laws, yet there is virtually
no accountability.

Recently, The Post, of New York, listed on their front page who they considered
to be the area's ten worst judges, and gave detailed reasons why, all in the
court records. All ten are still on the bench, and none of the decisions have been
overturned. As a matter of fact, nothing at all has changed.

The biggest threat to this country's legal system comes from within itself.

..Peter

N9XCU

To the Tune of Woody Guthrie's "This Land Is Your Land."

This Band Is Your Band

(chorus)

This band is your band
This band is my band
From the VLF clan
To the microwave fan
From one sixty meters
To the fun repeaters
R F belongs to you and me

(verses)

As I went scanning through
Through the RF spectrum
I saw the Fed's had
Totally wrecked 'em
And, with budgets shrinking
The Fed's start thinking
No band belongs to you and me

So now the feds sell
Something they don't own
This time they're picking
At the wrong bone
This piece of spectrum
Belongs to hamdom

Ham bands belong to you and me

Ken Bessler (KG0WX) (kg0wx@southwind.net) wrote:
: Well, I really hate to side with one who is so despised but I do think he has
: somewhat of a point there.

: Oh, s#$t, here come the flames.

Well....not a flame, but definately an arguement against what you
say.

: Really, though, would the world be such a terrible place without RACES or
: ARES? I know, I know. I'm bad - I'm ignoring the millions of people who's
: lives have been saved by amateur radio. I'm not disputing that - I've used
: the autopatch to call in road accidents, too.

Yes it would.

: But really, is the existance of amateur radio so critical to public safety?
: If all we have to support our claim to the use of billions of dollars worth
: of rf spectrum is the old "emergency communications" crutch then we are all
: in trouble. Today's communications infastructure is complete, diverse and
: efficiant. We just aren't needed that badly anymore.

First, let's ignore the US situation for a second. Amateur radio in
other parts of the world is often the only thing left of the
infrastructure after a major disaster. The rest of the world
receives extreme benefits from us during those times. That
just isn't a topic that can be disputed....and these countries
don't have the level of emergency communications infrastructure that
we have.

Now to the US situation. First, let's quickly talk about what a
disaster is as opposed to an emergency. A good working definition
of disaster is when all the normal emergency systems break. That
marvelous communications infrastracture that is "complete, diverse and
efficient" breaks during a disaster. If you have been lucky
enough NOT to have lived thru a major disaster in your life time,
let me assure you that during major disasters(Big quakes, big floods,
big storms like Hugo, Iniki and Andrew) that the standard emergency
infrastructure will either saturate or go down. Having a corp of
trained volunteers with their own equipment to supplement emergency
communications is what it is all about. We are able to step into
the gap and provide supplemental communications or sometimes the
ONLY communications available for some period of time.

However, we aren't perfect, and for that matter, the communications
infrastructures are getting more robust. The average citizen has
more capabilities for communications than they have had in the

past(cellular, etc.) When these systems come back on line...we're
not needed anymore. The times when we were the only game in town
for weeks after the event have passed....but times where we are the
only game in town for hours or perhaps a day are still definitely
with us.

: Maybe that is why the FCC gets so irritated with us? All we do is Bitch,
: squabble, whine, break rules and insist we are important because we provide a
: "critical" service to the public safety.

This is another discussion....I won't say anything except the FCC
has been a sleep at the switch for a couple years now, and that we've
been pretty damn patient. If the FCC is irritated at us...so what..
we're irritated with them.

: We need to make ourselves needed or else the FCC will just blow us off and
: sell our (our?) bands away.
: --
: KG0WX

I'd say we already are. See above for why.

>Jeff KH2PZ / KH6

GOOD POINTS! And better than 50% of the postings are for used
commercial gear, which is fine with me..since some of that stuff
makes awesome mobile, packet and repeater stations!

Unfortunately we also see an awful lot of ILLEGAL CB stuff too,
modified radios and splatterbox-amps! GFL trying to keep the
morons out of here...sigh.

I somehow doubt the collective community would be willing to
change the name to 'rec.radio.forsale'....but that's what I would
favor - with a change to the charter such that:

"..postings for contraban are NOT ACCEPTABLE! This includes any form of
equipment that has been modified, where the intended service requires
that the equipment be type-accepted, or certified for use by the FCC or
it's equivalent agency."

This would be fair warning to the contraban sellers that using the
newsgroup to sell their ILLEGAL merchandise would be considered a
'hanging-offense'! ;)

The "bridge" is a circuit that will always reroute the good polarities
from DTR and RTS to the op-amp to have pin7 +Vcc and pin4 -Vcc. This was
added because on some computers DTR and RTS may flip to reverse polarities
during power-up (boot) and that could damage the Op-AMp

2951. LEOS, digital RF and amateur radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC
From: Kevin Jessup <kevin.jessup@mail.mei.com>
Message-ID: <31B8793A.794D@mail.mei.com>
Source record: 223569

Regarding LEOS, digital RF and the like, I offer some thoughts
and speculation, Please don't take this as a flame, and I'd
appreciate your comments.

It seems to me many hams (not just the no-codes) enjoy operating
on VHF and up. A few actually build equipment (rather than just
copper j-poles ;-) and attempt to learn something about the RF
technology involved. Still, like it or not, "appliance operation"
is the norm. At least we are still an emergency resource when
all other communication methods fail. Will that continue?

It has been said that people (and even major corporations) usually
overestimate what technology will do in the short term (1 to 2 years),
but drastically UNDERestimate where we will be ten years down the
road. The technological problems in what sounds like science
fiction seem insurmountable. What is ignored is the exponential
growth of technology: it feeds on itself. Thus the skepticism
about what will actually exist in the not so distant future.

We've heard about LEOS before. We've heard the forecasts from
the big players in the satellite and telecommunications industries.
I believe in this case, they are NOT overly optimistic. In ten years
I honestly expect handheld, high data-rate, multimedia wireless devices
to be in direct contact with LEO constellations overhead. CDMA
or similar wide-band, spectrum efficient technologies will be the
norm. There are no hurricanes, earthquakes or floods in space.
Concern for communication in disasters will not exist. The wireless
bandwidth will be there and used on a daily basis. The satellites
will be many and inexpensive. The redundancy will be there and on
a far greater scale than the GPS satellites most radio amateurs
are already familiar with.

Wireless, no-license required ISM band (or whatever they will then
call it) simplex, CDMA handhelds will be used by the masses. Indeed
maybe your multimedia communicator will have it built in as an option.
The hundreds (thousands?) of "channel" options will in fact be enabling
a specific chip code (the spread-spectrum pseudo noise bit stream on
which your data will ride) used to generate the wide-band carrier.
"Citizens Band" will go digital! Why not us? What will we have to
offer if we don't?

We keep believing bandwidth will be in short supply and place little
or no faith in evolving or as yet undiscovered technological solutions
to the problem. Is amateur radio inherently pessimistic??

If our rules were changed so that DECENT wide-band, high-data rate spread-spectrum modes were possible for amateur radio (and finally ACCEPTING that you won't be able to monitor all traffic), wouldn't there be more amateur radio activity on the bands of the future?? Would the manufacturers start making such amateur radio equipment?

IMO, analog CW moon-bounce just doesn't impress anybody outside of the hobby. Exploring more digital RF methods would make us look a little more competent in the eyes of those after "our" spectrum. And even if most will be appliance operators (as far as the RF stages go), implementing, using and coordinating an RF-based, high-speed amateur multimedia network will still demand skills in other fields. In the future, it won't be analog RF anymore. Isn't that obvious yet? Isn't that why we are (and will be?) losing more and more of our bands?

I've read concerns about noise floors going up on 70cm and interfering with ATV if we allow spread spectrum. Well is analog TV the wave of the future!? Shouldn't we be looking at high-speed SS to deliver real-time images digitally? The multimedia PC is nearly an appliance now! Throw in the high-speed digital amateur RF and you're there!!

One final concern. Is it possible that multimedia RF access to spectrum (via the telcos and RBOCS) will be so cheap anyway that amateur radio won't matter? Very possible. But could we at least keep some amateur spectrum around as an option to learn? Perhaps it will be there only as shared spectrum on the ISM bands of the future.

With the many radio amateurs out there, we have an opportunity to learn the techniques and deploy the systems needed to utilize these bands, if only for educational and hobby purposes. Why aren't we doing this? The average radio amateur seems to believe there's nothing more out there than repeaters, HF and anything analog. Of the many on packet (still narrow band analog modulation), how many actively and financially support the backbone and it's development?

Can we look to the future as an opportunity instead of fearing it?

I have my Alinco DX-70T HF/6m rig in my car, and have the 6m side
hooked up to a RatShack 2m 5/8 wave magmount on my roof. It doesn't
work real well for local communications with people running horiz-
ontally polarized antennas, but it works OK for DX!

ARRL Field Day is ALWAYS the fourth full rainy weekend in June.
There is no exception. People often get confused because the
fourth full weekend is usually the last full weekend, too. This
happens to be one of those years when it is not.

73,
Bob

Why do you think all this "panic" has ensued to begin with. It was Dave Sumner's (K1ZZ) writing that we have been seeing posted over and over and over and over and over and over and over again here in rec.radio.amateur.et.al suggesting everyone write to whomever they should write to. Isn't getting the constituency riled up one way of getting the ball rolling?

> You might want to pass along a suggestion to the higher-ups in the ARRL

> It needs to be brief and to-the-point - but then, aren't Amateurs supposed to
> be able to communicate efficiently? Especially those that we pay dues to
> in order to represent our interests?

This is just MY opinion...but it SEEMS that WE hams expect this thing to be remedied overnight. Gummit don't work that way. I know that from having spent 20 years in the Air Force....close enough for gummit work anyway. You think the League might know that? And, that their steps are careful and calculated...not off the handle like many of the hams who post here become when threatened.

There are many of us who feel that nothing will happen to 2 meters and we realize that 70 cm is issued to the amateur service on a secondary basis....

One of the fundamental purposes of the Amateur Radio Service as expressed in the principles of §97.1, Basis and purpose, calls for the "Exansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts." It seems to me that this has gone by the wayside for the most part. Now we have a bunch of hams who degrade one another, fly off the handle at the weakest provocation, want everything instantly...which means to forego any training and to do whatever the spur of the moment brings.

It is obvious that many of the postings in regards to the topic at hand, i.e. BAND THREAT, are written from an emotional and spur of the moment fashion, and can only be counter-productive.

I imagine the FCC has received much e-mail from the same authors and now looks at ham radio operators as a bunch of careless jerks with attitudes, if it already didn't before. When dealing with any gummit agency, you have to treat it as a small child...of course giving it a lollipop will do no good. But, you have to talk nicely to it if you expect your actions, at all, to have any productive results.

A well thought out written message to our officials will go a lot farther in our quest to preserve our resources than a bunch of off the cuff flames that state how important we are in emergencies and that that we should keep our bands because of that.

If we appear to the FCC to be reacting the way this newsgroup is heading for the most part, just think how they must think we operate in an actual emergency.

It takes preparedness to get the job done right.....RIGHT?

> Or, is this just a political flex-our-power-muscles duel of egos between the
> League and the State Dept.??

> If this is for real, tell them they need to take action NOW.

What action should they take NOW?

Yes, in fact it is... You need one of 2 things though... Either the original sales receipt (or a copy), or one of those little silver stickers stuck somewhere on the rig (usually under the belt-clip).

If not there really isn't much that can be done... You might sweet talk a salesperson to calling the TSP support center and seeing if they can look it up by serial number. But good luck, that usually isn't done either because the sales staff is too busy (before you get angry, the shack isn't in any way required to prove the warranty, it's up to the buyer but they will in most cases if the store isn't packed with people and you ask nicely.)

I wish you luck...

I frequently see questions posted asking the time to expect for
learning to various code speeds. For what it is worth my experience:

2/1/96 started learning code - used W5YI tapes
2/28/96 got CODE QUICK tapes
3/10/96 passed 13 WPM test
5/28/96 hit 20 WPM -- test soon

Hints:
1) Get code quick
2) Get computer program -- morse academy from w5yi is good.
3)practice everyday -- get a mobile practice unit if necc. -- (it was

for me)

2960. Leos Update

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC

Message-ID: <834145768.AA06566@hamlink.mn.org>
Source record: 223578

Amateurs' comments are making an impact!
--
In just one week, more than 1000 comments from amateurs opposing commercial exploitation of the 2m and 70 cm bands have been received at the FCC! In a June 5 letter to ARRL Executive Vice President David Sumner, K1ZZ, FCC's Cecily Holiday confirmed that "all written and electronic comments received at the Commission to date by Amateur Radio operators have been included as part of the public record on WRC-97 proceedings. However, in the interest of efficiency, we have created a designated FCC office and e-mail site to channel future WRC-97 comments directly to the WRC-97 Committee Chairs."
--
An FCC Public Notice dated June 6 outlines the new procedures. A copy of that procedure was posted here yesterday, and is also available at the ARRL and FCC Web sites.
--
Also on June 5, FCC Industry Advisory Committee Chairman Scott Blake Harris wrote to Sumner to object to the ARRL's "tactic." Sumner replied the same day, "As you have been misinformed with respect to the League's activities, I am pleased to have this opportunity to set the record straight." We have honored his specific request "that ARRL ask its members to stop the e-mail/fax deluge directed at private sector members." However, "we reserve the right to report in the future on the actions of any participant in the WRC-97 preparatory process. Furthermore, we will continue to urge our members to monitor the process closely, and to participate as required to protect the interests of the Amateur and Amateur-Satellite Services." The complete texts of both letters are available on the ARRL Web site "http:\\arrl.org".
--
The presses had not yet rolled out page 9 of July QST, so the editorial planned for that issue has been revised to reflect the new FCC procedures.
--
Check the ARRL Web site often for further developments.

2961. Re: Studying for a HAM licence and I have questions.

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDsMxyE.IMn@netcom.com>
Source record: 223579

In article <4p81qg$t0l@news2.h1.usa.pipeline.com> Scott9@usa.pipeline.com(Hell Rider) writes:
-I am studying for a new licence and I have a few questions regarding
-Amateur radio
-1. What is the proper way to identify yourself in CW & Phone after the 10
-minute mark has passed?

All that is really needed is your callsign. Often people include the callsign of the person they are talking to (N1ZZZ de N1IST on CW), but it is no longer needed. "N1IST for id" is silly; why else give your callsign? Also, the 10 mins is a maximum time; if there is a good point earlier in a QSO to ID, that's also fine.

-2. What are the proper steps to take if you are ever on the air when S.O.S.
-or MAYDAY is broadcasted?

If you can help out, then do so. If others have already already responded, or you are not in a situation to help (not good enough station, not near a phone, can't make them out clearly), then just stand by

-3. What are some good HAM magazines and where can you buy them?

Major ham magazines are available at many larger newsstands and bookstores. These include the ARRL's QST, and also CQ and 73. More specialized magazines are harder to find (such as ARRL's NCJ (National Contest Journal) and QEX (Techinical and experimenter's magazine), or Communications Quarterly). There are also some very good club publications, especially from the various QRP (low-power operating) clubs.

-4. Can you skip licences?

You still need to take all the written exams, but, if you want, you can do them all at one sitting. If you pass a higher-speed CW exam (like the 20WPM one), you do not have to take the slower ones. If you only pass some of the requirements for a license (ie. the 13WPM code, but not the general written), you will get a certificate good for one year.

73, and good luck with the hobby.

> 73 Andy KC6NMD
The point is that should a new allocation of frequencies be made
available to the amateur radio service between 30.0 MHz and 49.999 MHz
(should I hold my breath?) it would be available to the Technician
class licensee. If the Technician license were 50.0 MHz and above that
allocation would not be usable by the Technician.

To say that what was done to our citizens of Japanese ancestry
in WW II was wrong is a reasonable statement. I agree that it
was wrong and should not have happened.

It is also valuable to find a way to understand what made it
happen. Was it a result of malice or ignorance or just fear?
It came from all of those things, of course.

Could it have been avoided? Probably so. Facing the same kind
of situation today, would we act differently? I certainly hope
so. You and I are the only ones who can change the future, and
we must do so.

As for the past -- Since we cannot change it, we make what
reparation we can to those Americans we treated so terribly
because of their ancestry and culture.

We need not pretend that no mistake was made.

My guess is that it was either the Post Office or some other governmental
agency; I know there have been several Federal users, including USPS, of the
220 MHz band.

Although I'm not Xian, IMHO your parenthetical comment smacks of the same kind of stereotyping we've seen used here against gays and weakens your otherwise correct statement. I agree with the observation that the climate of hostility in this country makes it unwise to make it easy for gay bashers to retaliate but I think the slander of Xians equally inappropriate. It seems to me that Xians, whether or not some or all Xians might wish it so, aren't accorded any special status in this country and aren't uniquely responsible for our culture.

It also seems to me that this forum would be better off without gratuitous attacks based on people's social, ethnic, or religious affiliations.
It seems to me that hams were, at one time, proud of maintaining at least a nominal attitude of inclusive tolerance - no matter how well or poorly we actually lived up to the aspiration. Ah, for the good old days - and I'm a CW op too..... 8-)

Hi Dick,
Well, if you had checked the original header you would have seen that
I crossposted this informal poll to the Australian newsgroup
aus.radio.amateur.misc.
If I had access to fin.r.a.m and thai.r.a.m (which don't even exist)
then I would have conducted a seperate poll for those folks.

The ratio of YES to NO answers is running about 2 to 1.

I was wondering about the mods that are possible to do to this radio. I already have open'd up the RX/TX but was wondering what elese there was to do to it. I have been told that it is possible for 800-900MHZ recetion in the TH-79E and that the only difference is the position of a diode and that if another diode is moved or add'd you can receive the 800MHZ band. Is this true?

Any info would be helpfull. Ex. point me in a direction to find info on it, a FTP site, WWW site, book etc..

Thanks,

Yes, Todd, I'll agree you can beat the system by giving the traffic
to another country who the U.S. has 3rd party agreements with.
But what I was trying to point out in the first message is that it
has been my experience that once 3rd party traffic gets out of
the U.S., it is very improbable that it will ever get delivered.

As I said in the first message, depends on where it is going. Now I
know you are sending it to Australia. As far as I know, there is no
NTS system for international traffic in place in Australia. Remember,
the NTS system was 'made in the USA'. The only other country
out here I have seen any NTS messages for was the P.I., and
with no zip codes, all that traffic had to be routed manually.

Again, check with the operator of the BBS you intend to originate
the traffic from - if he doesn't know how to route it then I can
assure you it won't go anywhere.

I am studying for a new licence and I have a few questions regarding Amateur radio, here they are, please respond either on this Newsgroup or via e-mail, thanks in advance:

1. What is the proper way to identify yourself in CW & Phone after the 10 minute mark has passed?

2. What are the proper steps to take if you are ever on the air when S.O.S. or MAYDAY is broadcasted?

3. What are some good HAM magazines and where can you buy them?

and lastley,

4. Can you skip licences?

Example:
You start out with a Technition Plus or Novice licenence and you decide to go straight to Advanced, can you do that or do you have to go in acending order?

Thanks for you time, and 73!

Yes, in a letter to the ARRL today, Cecily Holiday FCC Representative to
WRC-97 is asking for all public comments on the issue of amateur band
reallocation be sent to (wrc97@fcc.gov).

We are having an impact

in a letter to the ARRL, the FCC Representative and Director of
IWC-2a(Cicily Holidy) writes that their subcommittee has already received
over 1000 e-mail and Fax messages from concerned hams. Thus necessitating
the most recent public notice.

FCC Public Notice:
Procedures for Submitting Comments to
the WRC-97 Advisory Committee

June 6, 1996

On March 14, 1996, the Commission released Public Notice (No. 61997)
(Streamlining Notice), that
announced its new streamlined World Radiocommunication Conference (WRC)
preparatory process.
Under this new process, formal Notice of Inquiry (NOI) proceedings are
eliminated in favor of
developing WRC proposals in the Commission's WRC-97 Advisory Committee.
This removes the
redundancy that was inherent in our previous "NOI-WRC Advisory Committee"
process and enables
the United States to respond more effectively to the rapidly evolving
international environment and to
the ITU's new two-year WRC schedule.

The Streamlining Notice included general guidelines for submission of
public comments to the
Advisory Committee. The Notice stated that procedures would be developed
to ensure that members
of the public continue to have full opportunity to participate in the
development of WRC proposals
under the new streamlined process, including those parties who do not
attend meetings of the
Advisory Committee and IWGs.

Since the release of the Streamlining Notice, we have gained experience
with our new process. We
now provide these procedures for submitting comments to the Advisory Committee.

Comments on Ongoing Advisory Committee Matters: Parties that wish to comment on the ongoing deliberations of the Advisory Committee and its IWGs may do so at any time.

Comments on Preliminary Proposals: As announced in the Streamlining Notice, preliminary WRC proposals developed by the Advisory Committee will be released by the Commission in periodic Public Notices. These Public Notices will allow an opportunity for public comment and will provide the appropriate procedures, such as filing deadlines, to be followed.

In either case, parties wishing their comments to be considered directly by the appropriate Advisory Committee group and to become part of the Advisory Committee's public record should submit their comments in writing to Office of the Secretary, Federal Communications Commission, Washington, D.C. 20554, or by e-mail at "wrc97@fcc.gov." Commenters are requested to file an original plus one copy.

The comment should reference the Advisory Committee public record file number, "Reference No. ISP-96-005" and the appropriate Advisory Committee Informal Working Group, if known, in which their submission should be considered. The FCC staff will ensure that comments filed are considered in the appropriate groups.

For the most expeditious and efficient consideration of their comments, parties should refrain from filing comments directly with the Chair of the WRC-97 Advisory Committee, with the Chairs and Vice-Chairs of the Informal Working Groups, with individual FCC staff members or private sector participants in the Advisory Committee process.

For additional information, contact Cecily C. Holiday, Federal Officer of the WRC-97 Advisory Committee, or Damon C. Ladson, Alternate Federal Officer at (202) 418-0749, or consult the WRC-97 Homepage on the Internet (http://www.fcc.gov/ib/wrc97/).

2995. LEO satellites intended for Brazil and other equatorial countries?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-07 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDsLuuM.6BH@netcom.com>
Source record: 223748

Saw in the June 1996 copy of IEEE Spectrum, page 40, a blurb about a proposed constellation of low earth orbit satellites to provide a kind of cellular phone service. The satellites are to cover the Earth from 27.5 north and south latitudes (tropical regions. Brazil is the main country that wants this service. It mentions some companies involved with this "ECCO" project (equatorial constellation communications): Lockheed Martin Co, Bethesda, MD, Bell Atlantic, philly, E-Systems Inc Fairfax, VA, Equatorial Constellation Communications in Fairfax.

I *do NOT* know if this is where the 2m /70cm threat is comming from or not.

The satellites are to orbit 2000 km high, and probably be able to "hear" most all the 2m /70cm activity in the USA except Alaska.

You should be able to find IEEE Spectrum at any college or university library that has an engineering dept on campus.

All the usual disclaimers......

> to use this technology?

Yes, because one handlheld unit will do all that and more.

When analog cell phones first came out they were very expensive,
as was access time. Cell phone hardware is now basically free and the
service is relatively inexpensive (given the mobility and coverage)
and the price of access time continues to drop. I expect nothing
less from the LEOs in ten years.

It won't stop till everyone has wireless handheld multimedia
internet access. Ever hear of Java, the latest
object based and internet ready programming language that
is sweeping the software engineering community? It offers
far more that fancy animated web pages. It's main advantage
is client-server (bi-directional) based data access via
transparently downloaded and executed programs (applets).
And a JAVA phone has been announced! A company is combining a
handeheld digital cellular phone with an embedded Java web
browser!! Of course this will apply to land-based cell systems.
Expect LEOs to do as well and provide uniquitous worldwide coverage.

> And, yes, what about IBM's wireless , not to
> mention Motorola's Iridium system?

Competition is good.

>Huge bandwidth for how many users?

Far more than narrow band techniques can provide,
with far more services than analog can provide.

> And what happens to the 2300mhz PCS systems (just barely in service here
> in the US, but widespread in Europe).

Let it all evolve in the free market and see which technology wins.

> As for bands to plunder, what about the feds at 225-400 Mhz, TV channels

I used to get 73 Magazine years ago, and recently purchased the May issue. I can understand how many of you feel disappointed with the way the magazine is now, compared to what it had been. Especially since it devotes much of its limited space to articles that have little to do with radio.

Although I have not read the latest 73 magaazine with the article regarding the supposed moonwalk, I do have the book "NASA Mooned America!", (I did not purchase it from Wayne Green) and I believe that if any intelligent person looks at the NASA photographs in this book with an open mind, then he would have to agree that they were faked.

For example, the book contains one photograph from Apollo 11 showing two astronauts standing near each other on the moon. The taller astronaut was 3% taller than the other, but cast a shadow almost 50% longer! Another photograph shows a very abrupt transition from the highly detailed sand on the lunar surface to a blurry hill in the background. This transition follows a straight line, and is apparently because a mural was used in a studio. The same photograph shows a large rock with a very clearly printed "C" which is apparently a designation that studios use in classifying their fake paper mache rocks.

So while I can understand why you many of you are disappointed with 73 Magazine, do try to keep an open mind about this alleged NASA fraud, at least until you read the book.

jjmartin@shore.net (JJ Martin) just cast this into the Electronic Void:

[pardon the massive editorial SNIPS to save 'bandwidth']

>>... Isn't getting the constituency riled up one way of
>>getting the ball rolling?

Yes, it is - but if this 'threat' is real, we'll need the general public
behind us also. Strength in numbers, and all that...

>>There are many of us who feel that nothing will happen to 2 meters and
>>we realize that 70 cm is issued to the amateur service on a secondary
>>basis....

Ah, now you touch upon the central point. If nothing will happen to 2m,
why were we encouraged to launch a massive letter campaign? If the
threat is real, will just letters *really* be enough to counter the big $$$
stacked against us? <hmmmm...>

>>If we appear to the FCC to be reacting the way this newsgroup is
>>heading for the most part, just think how they must think we operate
>>in an actual emergency.

Another good reason for the ARRL to get out there and take control
of the situation. If what you say is true, they should probably have
issued some sort of "form" letter for members (and others) to sign
and send in addition to getting the public behind us.

>>It takes preparedness to get the job done right.....RIGHT?

Preparedness - and *leadership*. Unless, of course... [see next quote]

>>> Or, is this just a political flex-our-power-muscles duel of egos between the
>>> League and the State Dept.??

>>> If this is for real, tell them they need to take action NOW.

>>What action should they take NOW?

Like I said in my original post - get the public behind us. But for the
record, I believe (and hope) this may be a bit of a tempest in a teapot
and such action may never be necessary. The recommendations were,
after all, strictly preliminary.

Thank you for a wonderful post. I love a good discussion!
Let's lift our glasses and drink a toast: to a speedy resolution of this
whole crazy 'band threat' situation!

Lisa KC7PSZ

>something digital in nature.
>
>Does anybody have the inside track on this? The real answer, not just
>random speculation.

The Wall Street Journal reported that the Gates/McCaw consortium was
planning a satellite system to do Email and two-way paging. According
to the info on the FCC web site, this would be a TDMA system, similar
to the existing amateur Pacsats. Back to the Wall Street Journal story,
there are supposed to be 800 satellites in the system. They would be
released in "trains" so that there would always be a satellite in view
from any point on the globe (these are little LEOs, very little and very
low, so the footprint of any given satellite would be small, requiring
lots of them, and lots of different orbits for continous global coverage).
To keep the space based part of the system simple and cheap, there would
be no intersatellite linking. Instead, numerous ground stations would tie
the system to terrestrial networks.

Yes, they regularly get hit. No, the equipment isn't fried. The precautions
taken are extensive (serious adherence to the ground windowing principle).
There is usually no danger to people on the floors below, but that depends
on the building design. The fields generated by the surge flowing through
the building frame can be extreme, and there have been cases of arcing
through rooms between structural members in improperly designed structures.
It's our old friend di/dt through the L of the frame members at work.

Does anyone have a QSL bearing an old cartoon (perhaps from the "There Oughta Be a Law" strip, but I'm not sure) on the theme of "Pity the poor ham radio operator"? It showed hams being blamed for everything under the sun (TVI, etc.).

I remember seeing (back in the early 1970s) old QSLs with that cartoon reproduced on it, so I guess the cartoon itself dated from (at least) the 1960s or 1950s.

Hi !

Ham bands here in Germany are (Mhz):

1,815 - 1,835 Licence classes:
1,850 - 1,890 Class C: Can use all ham-bands
3,500 - 3,800 from 144,0 Mhz and higher
7,000 - 7,100 Max output 75 watts
10,100 - 10,150 'smallest' licence, no-code
14,000 - 14,350 Class A: Like Class C and following
18,068 - 18,168 portions of HF Bands:
21,000 - 21,450 3,520 - 3,700 Mhz
24,890 - 24,990 21,090 - 21,150 "
28,000 - 29,700 28,000 - 29,700 "
Max output 150 watts
144,000 - 146,000
430,000 - 440,000 Class B: All ham-bands (includes A and B)
Higher Bands in Ghz: Max output 750 watts
1,240 - 1,300 'highest' licence
2,320 - 2,450 Subjects of theory tests are:
3,400 - 3,475 Knowledge of laws, technicial knowledge,
5,650 - 5,850 proper operation includes knowledge abt.
10,000 - 10,500 logging QSOs, QSL cards, use of repeaters
24,000 - 24,050 QSO texts (abbreviated as in CW mode) etc.
47,000 - 47,200
75,500 - 76,000 practical test in CW for class A and B only:
76,000 - 81,000 A: 30 Characters/minute
119,980 - 120,020 B: 60 " / "
142,000 - 144,000 3 Minutes sending and 3 minutes receiving
144,000 - 149,000 for both classes, max. 3 mistakes allowed.
241,000 - 248,000 Random text (5 letter-groups), plain text,
248,000 - 250,000 QSO-text (one minute each receiving/sending)

Theoritical knowledge abt. laws and proper
operations minimum 65 perc. of approx. 13
questions for all three classes.
Technicial knowledge required for
Class C 50 perc. of approx 12-15 questions
Class A 65 " " " " "
Class B 75 " " " " "

Tests are held by BMPT (Bundesministerium fuer Post and
Telekommunikation), questions must be answered in full writing (no
multiple choice). The whole question pool incl. the correct answers
is available as paperback for learning. Time for answering the questions

abt. laws and proper operation is 30 minutes each subject, approx. 13 questions each subject. Time to answer the questions about technical knowledge is 75 minutes, approx. 13 questions as far as i remember. Use of non programmable pocket calculators is allowed.

The practical test (CW) for class A and B may be repeated once in the same session if applicant fails in the first attempt.
Sending test in CW with straight key only, no elbugs/paddles allowed.

On some Bands restrictions apply on power and mode used.

For usage of 50 Mhz special licence is necessary, only holders of class B may apply for that one, as far as i know the BMPT does not issue those licenses for time beeing.

Our calls (Prefix):
DA : Clubstations / special event Stations
DB, DC, DG, DD: Holders of licence class C
DH : Holders of licence class A
DF, DJ, DK, DL: Holders of licence class B

Sorry, if any mistakes.

>No, I think the correct method is to deal with it at the club level.

I was just reading the contract that sellers must sign and agree to its provisions, for the TRW swapmeet. This is the biggie in the LA area.

Basically, the TRW club prohibits selling items that are not ham/computer-related. If someone wants to argue that an X-rated CD-ROM is computer-related, the club also reserves the right to make the final judgment. This sounds like a model policy. Not only does it answer the porn problem, but keeps the swapmeet "on topic" so to speak. It also keeps the swapmeet from looking like a craft fair or a yard sale.

SCANNER CHARGE DROPPED AGAINST KENTUCKY TEEN

A judge has dismissed a charge of carrying a scanner that can receive police frequencies that was filed against a 16-year-old Kentucky ham, Greg Godsey, KF4BDY. Godsey, of Hopkinsville, Kentucky, was arrested May 11 by local police, who confiscated his Radio Shack HTX-202 2-meter transceiver. Greg's radio has since been returned to him. Other charges not specifically related to his Amateur Radio activity are pending against the youth. They have been continued until later this month. His parents, Gary and Fredericka Godsey, say Greg has never been in trouble, and they have hired an attorney.

Greg, who had been the ARES EC for Christian County, Kentucky, and only became a ham last summer, was detained by Hopkinsville Police May 11. Greg had steadfastly denied the charges, noting that his radio was not modified and cannot receive or transmit outside of the 2-meter band. He resigned as EC after his radio was confiscated. ARRL Regulatory Information Branch Supervisor Norman Bliss, WA1CCQ, says the Kentucky law exempts equipment possessed by a licensed Amateur Radio operator that is capable of receiving police frequencies.

3019. St Lucia on 6 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-08 00:00:00 UTC
From: billsohl@planet.net
Message-ID: <4pagqe$26d@jupiter.planet.net>
Source record: 223513

About an hour ago I worked KC4/AUF/J6 in St Lucia. Looks like he'll be there for this weekend's VHF contest too. He was on 50.115 and was solid 59 here in NJ. He was working stations throughout the eastern seaboard up to W1 land. The band was obviously open, yet the there was no activity above 50.125. I tried a few CQs to no avail. Maybe folks are hoping for similar condition on the weekend.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 911 2nd JUNE 1996

[Double-spaced, because that's how it arrived; I haved asked them
on NUMEROUS occasions to fix this!]

This is the Australian National Amateur Radio Teleprinter Society

with our weekly RTTY broadcast.

If you would like to receive the broadcast live, you can do so by

tuning in on the following frequencies and times.

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD COL

7.045 MHz -3 0030 UTC VK2CTD COL

14.070 MHz (amtor/fec) 0030 UTC VK2DPM ALAN

14.091 MHz 0030 UTC

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

A.N.A.R.T.S. News Bulletin 911 2nd JUNE 1996

ANARTS MEETING

ANARTS NEXT MEETING WILL BE ON FRIDAY 7TH JUNE AT THE USUAL

VENUE AND COMMENCING AT 7.30 PM. FOR FURTHER INFORMATION

CONTACT COL VK2CTD QTHR OR PACKET TO VK2CTD AT VK2DAA; OR PAT

VK2JPA, FAX : 672 3392, OR PHONE : 230 3722 (WORK).

COL'S COLUMN

ITS THAT TIME OF THE YEAR AGAIN. 'WHAT TIME' I HEAR YOU SAY!!.

ITS THE ANARTS WORLD WIDE RTTY CONTEST TIME. ITS ON NEXT WEEKEND AND I AM HOPING FOR A GREAT EFFORT FROM ALL YOU LOVELY PEOPLE IN THE VK RTTY-LAND.

THE REASON FOR THE HOPED FOR EFFORT IS THAT OUR CONTEST IS THOUGHT OF VERY HIGHLY BY OVERSEAS STATIONS, CONTEST MANAGER JIM VK2BQS HAS CALCULATED THAT UPWARDS OF FOUR OR FIVE HUNDRED STATIONS ACTUALLY TAKE PART IN THE CONTEST, WITH OVER FIFTY ACTUALLY SUBMITTING A CONTEST LOG. JIM MAKES THIS CALCULATION BY THE DIFFERENT CALLSIGNS WORKED IN THE LOG. A LOT OF OVERSEAS STATIONS MAKE COMMENTS AT THE END OF THEIR LOG, MOST OF THEM VERY FAVOURABLE TO ANARTS AND AUSTRALIA. HOWEVER A LOT OF STATIONS NOTE THE LACK OF AUSTRALIAN AMATEURS TAKING PART. YOU SEE, WHEN AN OVERSEAS STATION QSO'S WITH A VK CALL, IT IS AWARDED WITH BONUS POINTS. IF YOU COULD FIND IT IN YOUR HEARTS TO ANSWER A FEW CQ CONTEST CALLS I WOULD BE ETERNALLY GRATEFULL, YOU DO NOT HAVE TO SUBMIT A LOG (THOUGH THAT WOULD BE GREAT TOO), JUST GIVING A REPORT TO A FEW STATIONS WOULD BE ENOUGH. SEE IF YOU CAN BEAT NORMAN VK6GOM AND PETER VK6APW WHO WORKED TOGETHER IN THE MULTI OPERATOR SECTION LAST YEAR AND WERE WORLD WIDE WINNERS, AND RECEIVED A NICE PLAQUE FOR THEIR EFFORTS.

THE CONTEST COMMENCES 0000UTC SATURDAY 8TH JUNE AND CONCLUDES 0000UTC 10TH JUNE. QSO MESSAGE SHOULD CONTAIN. RST, TIME UTC AND YOUR CQ ZONE. IF ANY STATION REQUIRES A COPY OF THE RULES SEND A PACKET TO JIM VK2BQS AT VK2CZZ, OR TO ME VK2CTD AT VK2DAA.

HOPE YOU ENJOY THE CONTEST AND HOPE TO HEAR YOU ON THE AIR.

73S FROM COL VK2CTD PRESIDENT OF ANARTS.

G-TOR!!!WHAT'S THAT. DE VK2BOD

G-TOR IS NOW STANDARD IN THE KAMPLUS (VERSION 7.0P) AND

ENHANCEMENT BOARD FOR THE KAM(VERSION 7.0E). IT IS ALSO
AVAILABLE AS AN EPROM UPDATE WITH SUPPLEMENTAL MANUAL
DOCUMENTACION FOR BOTH THE KAMPLUS AND THE ENHANCEMENT BOARD.
INSTALLATION OF THE ENHANCEMENT BOARD IS REQUIRED TO UPDATE
THE KAM TO INCLUDE G-TOR.
G-TOR COMBINES A VARIETY OF SIGNAL PROCESSING TECHNIQUES IN A
UNIQUE WAY WHICH DRAMATICALLY INCREASES THROUGHPUT. G-TOR CAN
RELIABLY TRANSMIT DATA MORE THAN TWICE AS FAST AS PACTOR IN
MOST BAND CONDITIONS.AND, WHEN THE CHANNEL IS NOISY OR
UNSTABLE, G-TOR MAY TRANSMIT DATA NEARLY FOUR TIMES FASTER
THAN OTHER MODES BECAUSE IT IS RELATIVELY UNAFFECTED BY THESE
CONDITIONS.
G-TOR, SHORT FOR GOLAY-TOR, WAS NAMED FOR M.J.E. GOLAY'S ERROR
CORRECTION CODE,WHICH WAS USED BY VOYAGER TO TRANSMIT ERROR-
FREE COLOR IMAGES FROM JUPITER AND SATURN. THIS CODING SCHEME
PROVIDES THE BASIS OF G-TOR. G-TOR FAST, ERROR-FREE DATA
TRANSMISSION CAPABILITIES CAN BE ATTRIBUTED TO THE UNIQUE
COMBINATION OF SEVERAL TECHNIQUES INCLUDING:
1)FULL FRAME DATA INTERLEAVING,
2)ON-DEMAND HUFFMAN COMPRESSION
3)RUN-LENGTH ENCODING,
4)VARIABLE BAUD RATE CAPABILITY,
5)16-BIT CRC ERROR DETECTION WITH HYBRID ARQ AND
6)GOLAY FORWARD ERROR CORRECTION CODING.TOGETHER IN G-TOR,
THESE TECHNIQUES COMBINE TO PROVIDE FAST, ERROR-FREE DATA
TRANSMISSION IN A MODE THAT RESISTS INTERFERENCE AND REDUCES
MULTI-PATH EFFECTS.
TO PROTECT DATA FROM NOISE BURSTS DURING TRANSMISSION, G-TOR
MAKES USE OF A CONCEPT KNOWN AS INTERLEAVING, SIMILAR TO THE
APPROACH USED IN THE AUDIO COMPACT DISC. THROUGH INTERLEAVING,
THE BITS OF EACH DATA CHARACTER ARE DISPERSED ACROSS THE FRAME

AND THEN REARRANGED UPON RECEPTION. THEREFORE, IF A BURST
ERROR OCCURS ON THE HF CHANNEL,THE DAMAGE WILL BE SPREAD OUT
INTO SMALL PIECES ACROSS THE ENTIRE FRAME RATHER THAN
MUTILATING LARGE, NON-RECOVERABLE SECTIONS. USUALLY ONLY ONE
OR TWO BITS OF A SEGMENT WILL BE DAMAGED, MAKING THE ENTIRE
TRANSMISSION EASILY RECOVERABLE.
AT THE SAME TIME,FOR FAST AND EFFICIENT TRANSFER, DATA IS
CONDENSED THROUGH HUFFMAN COMPRESSION AND RUN-LENGTH ENCODING.
EACH METHOD MAY TRANSLATE DATA INTO CODES SHORTER THAN
REQUIRED BY THE ORIGINAL INFORMATION.

ARLD026 DX NEWS - EXCERPTS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFO PROVIDED BY

CT1ENQ, CT1EEB, CT1FUF, THE NORTHERN PORTUGAL DX GROUP, HAMAD,

9K2HN, GARY, NH2G, FRANK, AH0W/OH2LVG, UWE, DL9GOA, BOB,

DL7VOA, TED, NH6YK, RAMON, XE1KK, AND CONTEST CORRAL FROM QST.

THANKS TO ALL.

ANNOBON ISLAND, 3C0. TEO, EA6BH, PLANS TO RETURN TO

EQUATORIAL GUINEA AND OPERATE FROM THIS ISLAND, TOO.

COMOROS, D6. DL4XS, DL6ET AND DL3KDV PLAN AN ALL BAND EFFORT,

INCLUDING 160 METERS, FROM AUGUST 22 TO SEPTEMBER 4.

ETHIOPIA, ET. PETER, ET3BN, HAS BEEN ON 20 METER RTTY,

USUALLY FROM 1800 TO 1900Z ON 14085 KHZ. QSL TO PO BOX

150194, ADDIS ABABA, ETHIOPIA.

MEXICO, XE. RAMON, XE1KK, HAS PUT A BEACON ON 50.0225 MHZ,

LOCATED IN GRID EK09IK. IT IS REPORTEDLY THE ONLY SUCH BEACON

IN THE FIRST CALL AREA OF MEXICO. XE1KK/B RUNS 20 WATTS TO AN

OMNI-DIRECTIONAL ANTENNA. LISTEN FOR T T T DE XE1KK/B EK09.

RAMON WELCOMES RECEPTION REPORTS.

MINAMI TORISHIMA, JD1. JG8NQJ/JD1 HAS WRAPPED UP OPERATIONS

BUT WILL RETURN FOR A THREE MONTH STAY STARTING JULY 15. QSL

VIA JA8CJY.

JAN MAYEN, JX. LA7DFA IS ACTIVE ON 14008 KHZ CW SIGNING

JX7DFA. LISTEN FOR HIS 20 METER RTTY FROM 1000 TO 1400Z

FRIDAYS.

DODECANESE, SV5. MANFRED, DL8SET, WILL BE QRV JUNE 6 TO 20 ON

20 TO 6 METER CW AND SSB. QSL VIA DL8SET.

CORSICA, TK. FALK, DK7YY, EX DL7UTA, WILL BE ACTIVE AS TK/DK7YY THROUGH MAY 30. HE WILL BE IN THE WPX CONTEST USING 100 WATTS TO A VERTICAL. BEFORE AND AFTER THE CONTEST HE WILL CONCENTRATE ON THE WARC BANDS, AND IF CONDITIONS PERMIT, 10 METERS.

TOGO, 5V. ROY, DL7UBA, AND LARS, DL7ALM, WILL BE QRV FROM JUNE 3 TO 18. THEY HOPE TO OBTAIN THE CALLS 5V7HR AND 5V7ML, RESPECTIVELY, ON ALL BANDS, CW AND SSB. QSL VIA HOME CALLS.

SAINT KITTS, V47. JIMMY, W6JKV, AND MIKE, K6MYC, WILL ARRIVE ON THE ISLAND THE NIGHT OF JUNE 29 AND DEPART ON JULY 9. THEY PLAN TO OPERATE EME ON 50.144 AND 432 MHZ. SIX METER SPORADIC E IS ALSO ON THEIR AGENDA, AS WELL AS TWO METER E-SKIP TO EUROPE WITH THEIR EME ARRAY.

DOMINICAN REPUBLIC, HI. FRANK, DL5PV, IS ON 17, 20 AND 30 METERS SIGNING DL5PV/HI7. QSL VIA DL5PV.

COMING EVENTS

JUNE 7TH ANARTS MEETING

8TH-9TH ANARTS WW DIGITAL CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or fax to (02) 672-3392, or by packet to VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

or patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from

anywhere in the broadcast coverage area. We are looking for-

ward to news from your areas to let other amateurs know what

you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

I have written a simple Basic program to extract all available 2x1 and 1x2 callsigns from the QRZ! cdrom. You can find them at the bottom of my personal WWW page http://www.ultranet.com/~bob/

Click on the area you want and they will displayed on your screen. Choose SAVE-->AS from the FILE menu item to save them to your hard drive. Tested with Netscape 2.02 only. Probably work with most browsers or send me an email and I'll send the area you want to you as an email attachment.

3023. MS SOCIETY SUPPORTS HAMS

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-08 00:00:00 UTC
From: wf3h@enter.net
Message-ID: <4pauq1$e2a@news.enter.net>
Source record: 223517
Cross-posted to: rec.radio.amateur.policy;,rec.radio.amateur.misc

We of the Delaware Lehigh ARC (DLARC) have supported the local MS Society for their fund raising efforts for the last several yrs. I recently asked their local office to send a letter on their letterhead to our local congressman expressing concern about the possible reallocation of our bands. They were only too happy to do so...and VERY quickly responded to our request.

Dont be afraid to talk to groups who've used our services in the past...many of them are more than willing to help...and there is strength in numbers....

This is true in Michigan where my father lives but not in Hawaii and not in Nebraska. I purchased an HTX-202 in Hawaii and bought the TSP, they didn't put anything on the rig. I purchased an HTX-212 (which doesn't have a belt-clip BTW) mobile rig in December 95 and have already sent it in to the repair shop TWICE and they haven't put the silver tag on the rig. (They've also had my HTX-202 twice since January, too, & no sticker there, either). On the other hand, my father's HTX-202 just came back from repair and now is wearing the silver sticker under the belt clip. After my most recent experience with RS & my 212, I'm not likely to buy anything else (ham related) from RS again.

> in most cases if the store isn't packed with people and you ask nicely.)

I've only had one piece of ham gear "registered" by its serial number on the TSP and that was an HTX-100 back in 1991.

3026. Kentucky Ham Busted (UPDATE)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-08 00:00:00 UTC
From: t.wright@morehead-st.EDU
Message-ID: <Pine.HPP.3.91.960608013631.17028M-100000@msuacad.morehead-st.edu>
Source record: 223520

June 8, 1996

Here is what I have so far:

The police charged the Christian County Ky Ham with 3 charges

1. Possession of a device capable of receiving police transmissions
2. Impersonating a public official
3. Disorderly conduct

On charge #1 charges dismissed

The Judge hearing this has refused to dismiss the remaining charges.

Appears the impersonating a public official stems from the ham discussing "SKYWARN" with some other people. The facts surrounding this is unknown at this time but we all know what skywarn is all about and there is nothing I know off to warrant this charge. I don't know if the HAM was skywarn certified or if he had ever taken a skywarn class but with the report of him being the County ARES director I feel certain he is and was certified in skywarn before the fact of the arrest.

The last charge of disorderly conduct was placed against the ham because the officer couldn't find anything else to charge the ham with to cover the officers ass. There was only one officer involved instead of 2 being previously reported by me. This officer has been suspended.

I, personally, hope that the Judge does dismiss the remaining charges against this Young HAM and rips the officer, his Chief, and the entire Law Enforcement community a new rear......Even though I do work in Law Enforcement communications myself.

This is a bunch of BULL CRAP from the Get Go. (the beginning)

This is the information as I have it.

Any opinions expressed here are mine and does not express the opinion of my employer. (Employer listed below)

If I receive anything further I'll pass it on.

Thanks, it does help. Playing in the shack I measured an 80' section I bought at Dayton at 1.6 dB/100' at 445 Mhz. Looks like I measured pretty well.

During a boring work meeting last week, I was staring out the window looking at a very tall building across the street. On top of the building were a number of tall towers festooned with lots of antennas. We are on a coastal plan in the tropics, so this antenna complex must be an irresistable target for lightning.

Questions: Do buildings like this regularly take direct hits? Do these lightning strikes fry the equipment attached to the antennas? What precautions do equipment operators normally take? When the towers get hit, are there any consequences/dangers for people and equipment in the floors below?

ive visited a few commercial stations including one with a 1200' tower
in philly, and the commercial HF stn WOO in NJ. they often take direct
hits. the WOO antennas have spark gap lightening arresters leading to
ground. the stn in philly has wide copper flashing leading from the
antenna to ground.

This Band Is Your Band

(chorus)

This band is your band
This band is my band
From the HI HI clan
To the blowhard fan
From one sixty nine meters
To the farting repeaters
R F belongs to only you and me

(verses)

As I went scanning through
Through the RF spectrum
I saw the ham's had
Totally wrecked 'em
And, with their meaningless lives shrinking
The ham's start thinking
This band belongs to me and me

So now the hams try to keep
Something they don't own
This time they're picking
At the wrong bone
This piece of spectrum
Belongs to the American Citizen
Ham bands belong to you and me

1. Before -- not after 10 minutes are up -- send "de WX9abc" (your call) on CW and "this is WX9abc" (your call) on voice. You do NOT add the phrase "for ID" after your call. You are sending call letters for identification so don't be a lid and say "for ID". Simple isn't it.

2. You must take the written exams in sequence. 2, 3A, 3B, 4A, and 4B -- you can take them all at one time if you can pass them at that time. Code test can be taken in reverse order. If you pass 20 wpm you obviously could pass 5 & 13 so you don't have to take them. Or if you pass 13 wpm then you obviously could have passed 5.

3. Join ARRL and get QST magazine as part of your membership benefits. I don't take any other magazines, but I have done so in past. Depends on what you want. You may find QST and CQ on your news stand. See other messages on-line re 73 magazine.

Good luck. Hang in there it's a good hobby. (45 years since I got my Novice ticket).

Message-ID: <4pc124$7js@lehi.kuentos.guam.net>
Source record: 223530

Seems to me that the Radio Shack thing has been beat to death.
So I thought I would offer a suggestion to help those of you who
seem to be having problems with Radio Shack's technical advice.

Next time you need a resistor, go to an electronics wholesaler and
pay 3 bucks for one. The counter guy at the electronics wholesaler
is a virtual wealth of electronics information. Plus he's got a ton
of books he can look stuff up in for you. Probably five or six people
there that could build a TV set from scratch.

Please don't ask me why you should pay 3 bucks for a resistor
when you can get three of them at Radio Shack for 19 cents,
because I'll just respond by telling you that the free advice you
get at Radio Shack is worth exactly what you paid for it - nothing.

Let's stop beating Radio Shack to death. They are just trying to
provide us with what we want - cheap little electronic parts.

If you guys need something to beat to death, pick something that
deserves being beat to death, like for instance, Spew Durigan
down there in Sunny Central Florida. Give Radio Shack a break
and beat on old Spew for a while....

The best selling book, "Hitler's Willing Executioners" by Daniel Jonah Goldhagen tells the story of how ordinary Germans (like hams) allowed the holocaust to take place. The author shows the ingrained deep hatred for Jews that Germans had for Jews before Hitler came to power and that there was a widely held shared view that the the Jews ought to be eliminated in some way from German society. When Hitler, ultimately, chose mass extermination as the only "final solution" he was thus easily able to enlist vast numbers of Germans to carry it out.

Of course those Germans NOT alive during World War II cannot be held responsible. But I refuse to respond to German "CQs" because I feel the mindset of Germans even today would allow a repeat of the holocaust if the only could find another Hitler. This was shown during the recent Gulf war when Germany was the one selling weapons and materials to make poison gas to Iraq.

Surely there are some caring decent German people that would resist another Hitler and another holocaust but there are too many Germans just waiting to finish what Hitler started.

Is there anyone that agrees AND is willing to say so?
I notice that hams rarely will stand up for or stand against anything.

>Thanks, Tom K8TH

Tom, after having ran the QSL bureau here in Guam for a few years, seeing what came and from where it came, and where it should have gone, and after having QSL'ed with about 30,000 stations I worked myself, I am convince that the only way to QSL is direct to the station or to his manager. The ARRL was the worst when it came to sending cards to Guam that shouldn't have been sent here, but I do recall a few 'private services' that sent cards here incorrectly and when I returned them they just sent them here again in the next batch. It's more expensive to do it direct, but you are wasting your time and money to do it otherwise.

Amazing Burt. You can still write more than one dislectic sentence.
Your nephew Spew will be so proud of you. Could you convert that
over to RealAudio so we can all listen to you sing it ?

By the way, are you and Spew planning a march to Washington too ?
Just wondering, I have a freind who is bus driver in Washington and if
you two are going to D.C. it would be so nice to have him run into you
while you were there.

I happen to like 73 mag, as a matter of fact 73 is the first mag I open and read
I enjoy the talks about cold fusion, fringe sciences and even about his rag-time
music. I freely admit that I never ranked as normal and will never likely be considered
normal, but Im not about to change to fit the establishments expected value of

noemal. I did not say I agree with everything Wayne Green says, or with most of it, but at least the man has an opinion and does something different than the uasual pablim that I expect, afterall the arrl and the harris equiptment does no wrong and shouldnt ever be questioned. Honestly now lets follow the old established way of if you dont like the message shoot the messenger, that will make everything fine, RIGHT?? The man is presenting a variety of information that maybe you should read, think about (remember thinking,a lost art) and form an opinion on, Did nasa moon america?? I dont think so but I admire Wayne for giving a forem, I may disagree with everything but I love opinioned people and find it much more intresting than the weather is,,, Over the years I have had some strong disagreements, and have found myself in agreement averaging 75-80% of the time and totally opposed about 5% of the time, The mag is most likely my favorite, The never say die is the first page I turn to and even if I dont agree I thank the man for giving us the chance to catch information that we otherwise may not get to read. By the way I dont have TV as I have no use for the garbage and spun news that gets shoved up a gulliable publics ass and refuse to have childing having beavis and buthead as role models, If you wish to live your life in this manner fine, I however dont. By the way I have no use for Rush Limberger also but I dont go on spells telling other people to boycott him, To end I will continue buying and reading 73, Im glad for the mag, and even though its not entirly a ham radio mag most the others arent also I buy them all and read them all but 73 is and has been my favorite

Richard: Internet Phone is proving to be a very interesting medium for communication by ham operators. Amidst a real large number of very diverse (and often weird) topic groups (like IRC channels) on the I-phone servers you'll find a number of ham radio groups. These groups are populated by a very congenial group of hams. Among the stations listed, you will often see repeaters. If you are running the repeater link software in the background, you can access the repeater.

I have set up an interface with my 2 meter gear. I normally set up I-phone and connect it to my two meter transceiver. I select a simplex frequency. Then I take a handie talkie with me while going for a walk in the park or while working around the house. When a ham calls on I-phone, I hear a beep on the handie and can take the call. It is fun to work Australia and Japan with a two meter handie while walking along the Caribbean water front.

I-phone holds a lot of possibilities for ham radio. I've been pleased to see that the helpful and friendly ham radio spirit that dominates (most of the time) our radio bands has been carried over into the fiber optic cables.

CU on I-phone! 73 Bill N2CQR/HI8

I see these different groups that mix ham radio with a certain lifestyle or mix with another hobby or religion, and I wonder why? I do enjoy other activities such as bluegrass music, bird watching, also am single, but never really think about mixing them up and starting a "mixed interest" group! Ham-birders? Ham-banjo-pickers? How about Single-hams-working-as-tv-servicemen-who-like-bluegrass-birding-hiking..... gets riduculous after a bit! John Anderson K0BKL

I was wondering if anyone could help me out with a question i have about my 79A(D). I have had the expanded RX/TX done to it already but someone told me that its possible to get 800-900MHZ in it somehow. Now this was a first for me because i have seen about every mod book and text file there has ever been written on this radio and i have never seen anyone mention 800-900MHZ RX mods. Maybe it was available in the 79E version, but i have seen paper work saying if you switch a diode to another aolder pad it will put the 79A into europeian mode and basicly turn your radio into the 79E. Can anyone help me with this and or possible give me any more info on my radio, possible more mods or a good ftp site?

Kevin Jessup <kevin.jessup@mail.mei.com> wrote:

A bunch of stuff concerning the future of communications
for the masses which I have no quarrel with.

Cell phone technology had its beginnings back in the
70's with experiments in Chicago, then other metro
areas. Now cell phone towers are growing like weeds
even in rural and urban areas. I have one and rely
on it. World wide communication with a "Dick Tracy"
wrist radio at data rates will be in the future no
doubt. Also there is no doubt that SS does turn the
classic concept of spectrum conservation on its ear.
However, none of this addresses these questions:

1. What about weak signal work?
2. What about deep space radio astronomy?
3. What about a band of frequencies set aside
for responsible personal experimentation and
education, protected from SS noise?
4. What about SETI experiments?
5. What about those who want to experiment on the
electromagnetic and/or carrier rung of the
OSI model in the VHF and UHF spectrum?
6. What if someone develops a method of monitoring some
or all of SS traffic? Will he face a jail term or
fine if he monitors?
7. What if someone is doing EME work with an OOK narrow but
powerful carrier? Will he be forced to shut down?
8. What are the environmental issues with increased RF
energy raining down on folks in the VHF/UHF frequencies?

Will they have any rights or protection, or will we
"dumb them down" to conform to the rights of the masses
to have world wide wrist radios with no license required?

Should amateurs establish cellular circuits just because
of the success of commercial cellular technology? Should
amateurs establish wide band digital SS circuits just because
of the promise of widespread commercial success or should
they be given broad latitude to experiment or develop
education in any direction their imagination leads them?

Should we not be suspicious of any technology that claims
it must have more and more bandwidth and more and more
control of the VHF and UHF electromagnetic spectrum

in order to be successful? As someone mentioned previously why not force all commercial TV stations onto cable, freeing a large portion of the spectrum for LEO use? Many popular technolgies got that way because of minimal intrusive impact on the life styles of the populace while delivering benefits. LEO may be off to a bad start.

>jrouse@dc.infi.net jrouse@capaccess.org
>john.rouse@reporters.net.........................
>

John;

FACTS:

QRZ added 32 New Programs in the June 1996 Issue
AmSoft added 108 New Programs in the June 1996 Issue

QRZ June 1996 has a corrupted file "tfhpn101.zip"
AmSoft tests all its files.

QRZ June 1996 has published damaged data in the call sign data
Check out KC8CSF, KC8CYB,KF4GSM, & N3XGK on your QRZ!
These people were all born on 12/31/99? and got a ticket on 12/31/99??
AmSoft notified the FCC of these flaws on April 22. The FCC fixed them.
It may be a surprise to you, but SAM, BUCKMASTER, & AMSOFT all fixed
the call sign errors before publication this spring , QRZ did not....

So go ahead an spend your $12.95 or the $9.40 they were selling for at Dayton!
You only get what you pay for.....

BTW I also use the flying horse CD and like it.

Pete, KC3TL

I have now succesfully got my Kantronics 9612 with a Kewood 241a, and 451a working and on the air for true 1200/9600 gating. The 451a is on a 9600 bps split freq repeater, and runs in full duplex.

I still have a few bugs to work out in the cofig file, but my main concern was getting some software.

Anybody know any good dual port software for the 9612? I am interested in having split windows...one for each port (vhf, 1200 & uhf, 9600).

WinPack has split windows, but not for ports, hence, it cant be used effectively. Anybody have any ideas/suggestions?

Thanks much, & take care.

And it was committed by an organization of National *Socialists*.

>However, I call to your attention the fact that Germany
>has admitted its guilt, and has tried to attone for it.

Acknowledging guilt is grossly inadequate to reconcile what
the Nazi party did in terms of the country's ongoing liability.
Germany is still governed by socialists and despite the horror
of their history, they have not formed a constitution capable of
preventing such atrocities in the future. For the present
government to merely understand and admit that the genocide
committed by the Nazis was wrong will be of little comfort to
any future victims.

>This is more than many other countries, which also engaged in
>deplorable behavior, have done. No point in naming them, or
>getting into a debate about the relative evils of their actions.

In every instance, such atrocities have begun with government
refusing to recognize "lesser" individual rights, as well as its
responsibility to protect them. The lesson that should have been
learned in Germany is that government must be constitutionally
prohibited from using its power for any purpose other than the
protection of individual rights. That is its *only* moral
purpose, and every government in existence, including the U.S.,
remains in violation of this principle. For all nations not
to have corrected this in the aftermath of such horrendous
human suffering is a crime in itself.

>Amateur radio is an international fraternity that should
>transcend individual politics and ideology.

How does one transcend genocide? Individual politics and
ideology are the determinants of one's morality. Isolating
Amateur Radio from this arena only serves to expand its
presence into countries where the technical training to
which we are a party becomes a tool for government
oppression. No fraternity can possibly be claimed to exist
under such conditions.

While Hitler's party name was "National Sozaliste " (National socialist AKA Nazi), They were in fact a facist orginization and in no way related to the current CDU (Cristian Democrats Union), FDP (Federal Democratic Party) or CSU (Christian Socialist Union).

Not (exactly) true. The current constitution, written with the guidance of the allies, prohibits any German military action outside germany. This provision was written in to prevent Germany from ever again engaging in offensive warfare and conquest. However, you do have somewhat of a point, Jack. The current constitution is weak in the most critical area - preventing hate crimes. Yes, Germany is governed by Socialists. Lets not forget one thing: Hitler was a facist.

I agree! But what would you have them do? Mass suicide? They have been defeated, humiliated and occupied for 51 years now. The UN has forced a new constitution on them and they have abided by it. So, what more can they do?

P.S. Thanks to all for keeping this discussion flame free and spew free.

I doubt that the salesperson was being honest with you, or was misinformed. The local Barnes & Noble (CA counterpart to Bookstar) stores sometimes have a few ham books in with the electronics books, but not many.

Probably most of us buy ham books from specialized retailers, like electronics or ham stores, or use mailorder.

My other hobby - and profession - involves software development. Just try looking at computer-related books on a crowded day, without having to squeeze in, or have people walk right in front of you.

I've been following (sort of) the discussions about the LEO threat to the 2 meter band. I've been thinking about this. Given the fact that all around the world, the two meter band is populated by pirates (cab drivers etc.), it seems to me that this would not be the best place to operate the new LEO satellite systems. While the authorities could probably move us law abiding hams off the band, they'd be hard pressed to move the pirates (who are already violating the law!) Seems two meters might be saved by the pirates. Any ideas on this?

The LEO people would have way more influence (= money) than the ARRL,
and you can bet that if they took over 2m and wanted the pirates off
the band, they would soon be off... Dunno about internationally, of
course, but domestic ones would disappear much faster than they do
now, when it's only us hams who would like them to go away.

Interesting thought, though - perhaps all the Indonesian CBers will save
the low end of 40m for us HF types as well...

>You get what you pay for. You want cheap parts go to Radio Shack.
>You want tech support go someplace else.
>

Yes you can go elsewhere for tech support but shouldn't the
sales people have some basic knowledge concerning the products they
are selling? I don't mean the miscellaneous hardware but the
higher-ticket items.
Ask about those new CB radios (amateur gear) and play dumb.
Will it work with my CB radio? What do I have to do to use it?
Ask about the computer on display. Can I up-grade the
processor? What sort of RAM does it use? Does it have an on-board
cache?
Buy some coax and watch them coil it from hand-to-elbow rather
than spool it.
RS seems to have little or no training for their sales people.
The only good thing about RS is the convience.

I just acquired a Maxon CM-4020-D tranceiver. It has 4 crystals,
and they are on various 430 Mhz frequencies. I want to put it on
440, but was told that this model might be limited to 420 - 430,
and wont go up to 440 nicely.
I didnt get a manual, so if you know anything about this radio, please
let me know. I need to know the formula for calculating TX and RX
crystals (what's the IF?), and what other adjustments would have to
be done. And, most importantly, where is Maxon, and how can I
get manual for this radio. Thanks. -pat

Men have the innate right to resist theft and coercion.
Socialism forces their compliance in contradiction to that
right by whatever physical means are necessary. It makes
no difference whether the enforcement occurs through the
courts or by occupation of the streets with thugs. All
who oppose the demands of government, regardless of the
immorality of those demands, are dealt with by force.
Anyone who can tell me why this isn't fascism, please
step up.

As to the new parties, they are related to the old by
their continued inability to divest themselves of the
aforementioned characteristic.

>> Acknowledging guilt is grossly inadequate to reconcile what

Ken, government should NOT be in the business of
prescribing punishment on the basis of one's beliefs or
opinions, even when they're obscenely offensive. This is
not the problem with the German constitution and I
consider it an exceedingly dangerous precedent in the U.S.

>Yes, Germany is governed by Socialists. Lets not forget one
>thing: Hitler was a facist.

Ultimately, all socialists are fascist and all fascists are
socialist. The distinction between the two is solely a
matter of perception. It has no effect on the violation of
rights that each system requires in order to survive, nor
the fundamental belief inherent to each that the state is
superior to the individual.

>> For the present government to merely understand and
>> admit that the genocide committed by the Nazis was wrong

I'm not singling out Germany in my denouncement of socialism
and government atrocities. However, the Nazi Party serves
as an example of some of the most horrendous crimes ever to
be committed by the socialist mindset. If any country in
modern times ever had a reason to research the fundamental
errors in government that have allowed such crimes to be
committed, and to forge a constitution that distinctly
defines and restricts the moral purposes to which government
power can be put, it is Germany.

These things aren't necessarily bad, but I'd rather read him when he talks about things of substance, like why amateur radio is dying out (i.e. not enough younger people are being attracted to it). Some of his other stories, such as about his travels, etc. were very interesting too.

Wayne tends to bounce around, between "I'm not one of those religious nuts" and "Have you heard the teachings of Sri Krishnamurti", etc.

He also had some interesting ideas, such as the "trigital" system he proposed as a data compression system.

One thing he's right on about, though . . .ham radio needs to reach out to the community more. That includes young people and (gasp) minorities as well.

Otherwise, someone's going to come up with a wireless Internet system (hell, there's already a Part 15 wireless internet operating in San Francisco on 900 mHz), and connecting some inner city or rural school to the Internet with such a system will look much more like "the public interest" than a bunch of old guys fighting over who coordinates the closed repeater on 440. ...

Oh, one other thing . . .

> By the way I dont have TV as I have no use
>for the garbage and spun news that gets shoved up a gulliable publics ass
>and refuse to have childing having beavis and buthead as role models,

My TV usually gathers more dust than programs, too. I'd rather discuss
these things on the Net, and packet radio when I can get a good
signal out again . . .

If this is the stupid taxation is theft argument, then every democratic
government in the world that imposes taxes, including the USA, must have
a fascist government.

> As to the new parties, they are related to the old by
> their continued inability to divest themselves of the
> aforementioned characteristic.

Oh, really? What turnip truck did you just fall off? Socialist
goverments use exactly the same laws as every other form of government
to make people pay taxes, etc. It's not as if Americans, for example,
weren't forced by law to pay taxes.

> >Yes, Germany is governed by Socialists. Lets not forget one

This is just plain wrong. I don't know whether from ignorance or design, but socialism is NOT fascism. It's not a matter of perception, it's a matter of fact. Socialism, if anything, is the opposite of fascism.

Equating socialists with nazis is a lie worthy of Joseph Goebbels himself. The Nazis are not, were not socialists, they were fascists who spent a good part of the thirties and forties murdering socialists whereever they could - like Spain, for example.

Calling themselves National Socialists didn't make them socialists any more than Communist East Germany was Democratic because they called themselves the German Democratic Republic.

There have been socialist goverments in Britain, Holland, Sweden, Australia, New Zealand, and many other countries. None of them have ever been accused of behaving like Nazis with the slightest credibility.

As the son of a father who fought real Nazis while in the Dutch underground, and a mother whose family concealed a Jewish family in her attic in Utrecht for 2 years while the Nazis and their allies hunted for them - I and my family know what Nazis are, and the difference between them and socialists.

You are either woefully ill-informed or a terrible liar.

Followups directed to alt.bizarre.

3083. Code Quick, Any Good?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-09 00:00:00 UTC
From: lui@netcom.com
Message-ID: <lui-0706962258140001@192.0.2.1>
Source record: 223427

I passed all of my written exams (2, 3A, 3B, 4A, 4B), so now I need to prepare for Element 1B or 1C (I did pass 1A). Has anyone used Code Quick to raise their code speed to 13WPM and/or 20WPM from 5WPM? Since I did pass Element 4B, I'll probably try to pass 1C (20WPM), and then I'll be done with testing and can have fun operating!

Ohio/Penn DX Bulletin No. 257

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 257
BID: $OPDX.257
June 10, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA3YVN, W5IJU & Island News, AA5DX, NL7TB, K8YSE, CT1ENQ & NPDXG, DF4RD, DL7VOA, DL9GOA & DX News Letter, EI7DNB, F6ARA & LNDX, G3ZYP, G4BUE & DX News Sheet, GB2ATG & BARTG, HA0DU, HA0HW, JA1IDY, PA3BIZ, VE9AA and YV5EED for the following DX information.

3Z, POLAND. Activity by 3Z0WAW has been heard on all bands (including the WARC bands), CW and SSB at various times through out the day. This is a special event station in Poland to celebrate the 400th anniversary of the transfer of the capital city from Cracow to Warsaw by Zygmunt III Waza. Length of activity is unknown. QSL via SP5PBE.

4M5, VENEZUELA (IOTA ALERT!). A group of 16 Venezeulan operators will activate Los Roques Island, SA-35, to celebrate Venezuelan Navy Day. Operation will take place from July 18-21st. They will operate CW, SSB, RTTY, satellite, VHF packet and 6 and 2 meters. The callsign will be 4M5LR and QSLs go to WS4E.

5V, TONGO. Roy, DL7UBA, and Lars, DL7ALM, have been very active as 5V7HR and 5V7ML, respectively, and will continue to do so until June 18th. Their activity seems to be mainly CW, but some SSB operations have been reported. Activity will be on all bands including the WARC bands. QSL via the homecalls.

9H, MALTA. On a combination holiday/DXpedition, operators Frits/PA0BEA, Bill/PA3BIZ, Teun/PA0TPM, Peter/PE1NZA, Anton/PA3CRA, Eric/PA3DES, Phillip/PA3EPV, and Andre/PA0JR will be active from June 23th until July 6th, as 9H3IE, 9H3ON, 9H3TD, 9H3TE, 9H3UJ, 9H3UK, 9H3WA and 9H3WH, respectively. The eight operator team will be active on 80-2 meters and 70 cms, including satellite operation. Operations (if possible) will be around the clock on the usual DX frequencies. From 1900-2100z, the group will be on 14180 and 18140 kHz during a Dutch net. They will be operating from the town of Sliema (Grid JM75FV and IOTA EU-023). All

QSLs direct via CBA or Dutch QSL bureau. QSLs can also be sent through their club PI4KGL, P.O. Box 1126, 2340 BCOEGSTGEEST, The Netherlands.

BS7, SCARBOROUGH REEF. Your editor was told in Dayton by a well-known DXer not to report on the specifics on this one. But since most of all the DX bulletins have reported that another DXpedition to Scarborough Reef could take place in October 1996 (ed. I was told later!) when the typhoon seasons ends, I figured I would join in on the fun reporting the possibility of an operation.

CANADIAN IOTA ISLANDS. John, N6JM, will be active from the following islands with a vertical on 10-80 meters: Anticosti Island NA-077 (July 1-3rd), an island from the Newfounlands Coast Group NA-198 (July 9/10th) and La Madeleine Island NA-038 (July 20/21).

CY0AA (SABLE DXPEDITION) FINAL UPDATE. Preparations for this operation continue to proceed on time and on schedule. Mike, VE9AA, will be the first arrival on the island. The CY0AA operation should begin on June 18th. The second group (WA8JOC & W9OEH) will then begin additional activity for another 9 to 10 days on June 24th, and all 3 stations will be active until July 3rd in the early morning. The band plan has now been updated to include 432 Mhz also. Look for them on the standard HF split frequencies, and on VHF, 50.110, or if a second station is needed on 6 meters at the same time. Due to multiple Es openings, the second frequency of 50.225 may be used. QSL information will be repeated periodically. Please LISTEN to the operators instructions. QSLs for 160-10 meters will go to WD8SDL, and for any VHF (2,4,6,70cm and satellite QSOs, cards should be sent to VE9AA. They ask that all cards go direct, with SASE (Canadian stamp etc. for VHF cards) required. Bureau cards will be handled but at a lower priority, and will most probably be of a lesser quality than direct QSLs. Turnaround time for bureau cards will try to be kept under a year. ADDED NOTE: OPDX InterNet subscribers will receive an additional bulletin containing the complete news release. Also, check out their WEB site at: http://www.cam.org/~dino/sable.html

JD1, MINAMI TORISHIMA. The DX News Sheets report that JG8NQJ will return to here on July 15th for a 3 month stay as JG8NQJ/JD1. QSL via JA8CJY.

KH5 & KH5K, PALMYRA/JARVIS ISLAND AND KINGMAN REEF. The Northern Portugal DX Group report rumors from Hawaii stating that a DXpedition to Palmyra (KH5) and Kingman Reef (KH5K) is in the works. For now the operators are in the planning phase and are facing the first major problem of getting the very difficult permission to land on Kingman Reef. (UPDATES to OPDX are very appreciated.)

NEW DX USENET GROUP NOW ACTIVE. Add the following new UseNet group "rec.radio.amateur.dx" to your reading list. Check it out!

OOPS DEPARTMENT. In last week's bulletin, we reported that cards for VQ9DX should go to AA6DX (WRONG!). VQ9DX cards go via AA5DX.

P5, NORTH KOREA. Sanyi, HA7VK (ex-XU7VK, XU95HA), is currently in Phenjan, North Korea at the Hungarian Embassy and has contacted several

North Korean officials, reports the following: "At present time there is absolutely no chance to get an amateur radio license in North Korea. They will not even talk about a permission to operate." Sanyi has also spoken to BZ1HAM and other Chinese operators in Beijing, who have tried to pursue the same thing, but they have received the same results.

SPECIAL EVENT STATIONS.....
Look for two stations (TM1V and TM8OV) to be active for the 80th anniversary of the Battle of Verdun (1st World War). They will be active on all bands SSB from June 10-16th. QSL TM1V via F5NPS and TM8OV via F5REQ.

YM21HCS and YM22HCS are special stations to commeorate the United Nations Conference on Habitat 2 in Istanbul. HCS means Habitat City Summit. YM21HCS is located on the European side of Istanbul and YM22HCS is located on the Asian side in Istanbul. Opearators are members of TA1KB (European side club station) and TA2KK (Asian side club station). JA1IDY was able to join the group's operation at YM22HCS from June 3-4th during his stay while participating in Habitat 2. Activity of these stations will last until June 14th. QSL via TA2BK or via the bureau.

SV8, AEGEAN ISLANDS (GREECE). The Island News (News and Views for Radio Amateur Island Hunter, published twice each month) reports Vitto, I3BQC, will be active from the island called Samos (IOTA EU-049) and possibly other islands in the area June 20th to July 5th as SV8/I3BQC. QSL via CBA.

TRANSATLANTIC CHALLENGE. To assist in the study of transatlantic VHF propagation, a test beacon will operate from the SW coast of Ireland from Sunday 9th June 1996, for a period of aproximately 3 months. The beacon's callsign is EI3DP/P, operating on 144.480 MHz (CW) and running 25 watts with a 8 element Quagi at 20 ft, pointing at USA/Canada. Beacon transmissions are every 60 seconds sending "TEST DE EI3DP/P EI3DP/P EI3DP/P QTH IO41XP. Any station in USA/Canada which monitors the transmission and wishes to attempt a two way QSO is invited to telephone a paging receiver number +353 1 2032371. This will give a bureau service with Alphanumeric message service. The station operator Jim Ryan, EI3DP, will appreciate any reports from stations who may monitor the transmission. Home address as per callbook. Tel: (home +353 21 632365) (work) +353 21 504744

ZL8RI KERMADEC ISLAND DXPEDITION WRAP-UP... Al, WA3YVN, provided OPDX with a detailed fax of the ZL8RI operation. The ZL8RI team consisting of Ken/ZL2HU (Leader), Lee/ZL2AI, Chris/ZL2DX, Ron/ZL2TT, Peter/ZL3GQ, Bin/JA3ENU and Al/WA3YVN were able to make 34,000 QSOs including 1,439 on RTTY and 303 on 160 meters. The QSO breakdown was: 54.6% SSB, 41.2% CW and 4.2% RTTY. This accomplishment was done despite a day of strong gale winds which damaged their 160 meter antenna a few days before leaving. They also had a generator fail, and it could not be repaired. Violent weather also played a big part on their trip there and back. The sailing ship the "EVOHE" lost one of two engines on the trip back

to New Zealand which made some of the operators have doubts whether
or not the ship would make it back on its own power. In all, the ZL8RI
DXpedition was a big success, and the DX community is very appreciative
of their hard work to provide many with a new one!

There are several major players that stand to benefit from increased
spectrum for the LEO satellite system. Microsoft is one of the key funders.

Apple Computer is at this time going after a hundred fifty megahertz of
our 5.7 GHz amateur band for the terrestrial wide band spread spectrum
data networks. **

OK are you going to give up your ms-dos and your mac-os computers and
programs ?

How about all the Motorola radios, repeaters and semiconductors ?

and the list goes on ....

To all radio amateurs

SB QST ARL ARLB037
ARLB037 2m/70cm/WRC update

Hams respond to band threat with flood of comments, FCC sets up
central comment address

Hams have responded in force to defend the 2-meter and 70-cm bands
against a threat from the Mobile Satellite Service (MSS). Over the
past week, hams have directed more than 1000 comments by letter,
e-mail, telephone and fax to representatives on Informal Working
Group 2A (IWG-2A), which is preparing draft US proposals for the
1997 World Radiocommunication Conference. The IWG-2A's list of
''candidate bands'' for low-earth orbit mobile satellites (''little
LEOs'') includes the 144 and 420 MHz bands, among others suggested
for consideration. Little LEOs are intended mainly to offer
commercial paging and other low-data-rate messaging services.

The list of candidate bands was submitted by little LEO industry
representatives at a May 7 IWG-2A meeting. ARRL Technical Relations
Manager Paul Rinaldo, W4RI, was present and objected strongly to the
inclusion of these two bands. He was told that objections should be
submitted in written comments, and the ARRL did so on May 15.
Despite the objections, the two ham bands remained on the table,
prompting ARRL Executive Vice President David Sumner, K1ZZ, to issue
a call to action in his July 1996 QST editorial. The
```

editorial--circulated far and wide by e-mail and packet radio--generated so many responses that the FCC has had to modify its procedures to cope with the deluge.

Instead of directing comments to the list of individuals distributed in an earlier bulletin and included in the pre-press version of K1ZZ's editorial, send comments by e-mail to wrc97fcc.gov. Send written comments--an original plus one copy--to Office of the Secretary, Federal Communications Commission, Washington, DC 20554. Each comment should include at the top, ''Reference No. ISP-96-005'' and ''Advisory Committee Informal Working Group 2A.'' The FCC staff says comments will be given prompt consideration. All written and electronic comments from Amateur Radio operators received at the Commission have been included as part of the public record on WRC-97.

Again, for the most expeditious and efficient consideration of your comments, the FCC asks amateurs to not send comments directly to the chair of the WRC-97 Advisory Committee, to the chairs and vice-chairs of the Informal Working Groups, to individual FCC staff members or to private-sector participants in the Advisory Committee process. Spread the word about this new commenting procedure.

The ARRL Web Site has complete information on the band threat situation at http://www.arrl.org/ and will update the information to reflect further developments.

In article <4p8q3e$c8d@dsm6.dsmnet.com> mikemiller@dsm1.dsmnet.com writes:
>
>As for bands to plunder, what about the feds at 225-400 Mhz, TV channels
>70-83 (share with trunked/cellular), plus the spectrum from 1200-2000mhz
>(share with other satellites, radiolocation, etc.) - leo satts would work
>fine in any of these - but not very well at 144 or 440 mhz due to propagation
>problems.

TV channels above 69 are already gone, filled with cellular and trunked systems. In the *US*, much of the 225-400 MHz range is used by the military, and by garage door openers. But that isn't necessarily true in other countries (and what other countries are doing with the spectrum *matters* for a satellite allocation). The spectrum above 1 GHz is being handled by a different working group, and don't think amateur bands in that spectrum won't come under attack too. A number of other satellite systems want that microwave spectrum. LEO sats work fine in the 2m/70cm spectrum, as demonstrated by the amateur satellites. Hams *proved* this spectrum is suitable for LEOs. It isn't a question of whether LEOs should have VHF/UHF spectrum, that's now a given, the question is what bits of the spectrum it is to get.

Since satellite spectrum must have a worldwide allocation, the ITU will have to look at worldwide uses of the spectrum to find a place for the little LEOs. Two of the few contiguous chunks of spectrum in the VHF/UHF range under 1 GHz which have a worldwide allocation to a single service are the 144-146 MHz and 430-440 MHz amateur allocations. The other segments of spectrum are used by different services in different countries. It would likely be much harder to gain acceptance for a change to those myriad governmental and commercial usages than it would be to boot amateurs, who are generally very small segments of the populations of most of the world's countries.

This means that if the US, with 1/3 of the world's amateurs, manages to approve reallocating this amateur spectrum, the rest of the world is likely to heave a sigh of relief and rubber stamp the idea. If the US proposes other spectrum below 1 GHz, however, the little LEOs will face a harder fight at WRC-97. The little LEO industry knows this, and that's why they've asked for amateur spectrum.

This implies that any alternative to amateur spectrum must displace fewer users, and less politically powerful users, than amateurs. That's a hard one. There are few spectrum users less politically powerful than amateurs. There are services with fewer emitters than the amateur service, however. If they can be convinced to terminate operations, or to share their spectrum, then we may have

a hope of protecting the amateur allocations.

Note that the little LEOs, like amateur satellites, need *two* bands in which to operate. Those bands have to be far enough apart so that massive duplexer cavities aren't required on the satellite to prevent downlink signals from interfering with uplink signal reception. 2m and 70cm are *proven* bands in this regard, with several currently flying satellites using them. Any alternative bands proposed will need to have sufficient spacing to eliminate the need for massive filters too. (It would be best if the two bands are not harmonically related, however, there have been problems with 2m/70cm in that regard.)

Note too that the little LEO industry hopes to sell millions of Earth terminals for this system, IE a consumer market. That implies that costs of the Earth terminals must be relatively low. That then implies that they will not be very resistant to overload from other services' transmissions, so the bands selected must be relatively distant from bands with high power transmitters (keeping in mind likely image responses too).

Note also that doppler becomes a *serious* problem for LEOs the higher in frequency they go. So the little LEOs want the lowest frequencies they can get to minimize this problem. (The consumer gear will be cheap, so doppler tracking requirements need to be minimized, and the satellites will be small and power limited, so the requirements on them should also be small.)

One place to look is the VHF TV spectrum. That's scheduled to be abandoned by TV broadcasters in the US at the end of the phase in period of HDTV (and has already been abandoned by TV in some other parts of the world). The end of the phase in looks like it will be in the 2006-2008 time frame. The little LEOs would like to be operational sooner than that, of course, but if they can get 6 MHz allocations instead of just 4 MHz, they may be content to wait. Or they can buy off the stations occupying the selected channels before the phase in is complete and have them move to UHF earlier.

This would be an ideal outcome for amateurs. There are a couple of gotchas here, though. First, little LEOs already have an allocation at 149 MHz. Their new spectrum wouldn't be contiguous with this, but 2m would. However, since they have yet to launch a satellite, they could abandon this spectrum in return for a greater amount of VHF TV spectrum. (Channels 6 and 13 are probably the best candidates.) The second gotcha is that parts of the world have already abandoned VHF TV and reallocated its spectrum to other users. Those users would have to be convinced to move (and where would they move?). I don't know how heavily that spectrum has been populated in other parts of the world, so I can't estimate the extent of this problem. It may be a killer.

"CK's Ode to Dah Code" by Gary Spence VA2CK - cspence@synapse.net

We' ve all heard the cry "abandon the code!,
it's useless outdated, NOT a mod-er-n mode!"
So I said to myself,"could codes' day really be over?
Best left for SKs' fer-til-iz-n' the clover?"

So off went my paddle 'n keyer to a museum,
so those curious of our "past" could drop in an' see um.
I then bought a computer and a box I was told...
would update my station,using all hi-tech modes.

It then was set up,all by my own hand...
the screen it lit up et voil&#65533; Heard Is-land!
I switched to transmit to" talk with this gent"
but my screen read "sorry, can't copy 100%!"

"There's static,interference if you could hear it you'd agree...
if it ain't armchair copy we machines cry c'est la vie!"
It then said "there is as YOU know a way to get through,
it's called the code,and what luck for you!"

"You've learned this art,you "stuck it out"
'tis a valuable tool,there isn't a doubt."
"You' ve invested your time,and besides the code you did learn,
possession of valuable skills must be... EARNED!"

So I say to you now don't get fooled when some say...
"Codes an' old dinosaur fadin' away!"
It's part of our past,present and future existence...
anti-coders prepare for "beaucoup de resistence."

(for your use....as you please...."

What is the best way (voltage, amps, charge time) to recharge a
12volt, 4 amp hour gel cell. The one I have is a YUASA NP4-12.
Thanks in advance,

>doubt. Also there is no doubt that SS does turn the
>classic concept of spectrum conservation on its ear.
>However, none of this addresses these questions:
>
>1. What about weak signal work?

Weak signal operators can take advantage of the correlation gain
offered by spread spectrum techniques too. In a sense, every SS
operator is a weak signal operator. The correlation process synthesizes
a narrow effective bandwidth, often narrower than can be realized by
conventional filters. And SS inherently offers a frequency diversity
that is resistant to the varied multipath fading problems of Dx type
weak signal operations such as EME. Just as we now reserve a bit of
VHF/UHF band spectrum for weak signal operators, we can in the future
reserve certain spreading sequences for weak signal operators.

>2. What about deep space radio astronomy?

Radio astronomers are limited to certain narrow slivers of
spectrum *now*, because of the need to allocate spectrum to other
users. Those same slivers can be programmed out of the spreading
sequences of the coming SS systems. But a better ultimate answer
for deep space radio astronomy is to move the radio telescopes off
Earth entirely so that frequencies other than those slivers can be
examined (most of the signals observed by radio telescopes aren't
inherently narrowband or coherent, so being limited to narrow slivers
of spectrum severely limits current radio telescope observations).

Just as Hubble benefits by getting above the atmosphere and its light
"pollution", getting the radio telescopes away from the RF "pollution"
on Earth will allow them to "see" much deeper into space. The farside
of the Moon is frequently suggested, but a radio telescope in solar
orbit would also be better than an Earth based one (and perhaps cheaper

than a lunar farside telescope since inflatable or spun structures
could be used for its antenna, allowing the antenna to be bigger than is
feasible on Earth or Luna while costing less than construction in
even the lunar gravity field).

>3. What about a band of frequencies set aside
> for responsible personal experimentation and
> education, protected from SS noise?

Huh? For the most part, personal experimentation and education
don't involve extremely weak signals. Narrowband and SS can
coexist on the same spectrum, the interference each causes
the other is minor. It is possible to select spreading sequences
which will leave a particular band segment empty of SS energy
so that spectrum wasting narrowband techniques can be used
for extremely weak signal work. But as I noted above, it is
more spectrum efficient to set aside a few spreading sequences
for weak signal work instead. (It doesn't matter if the signals
are separated in the frequency domain or the time domain, the
net effect is the same.)

>4. What about SETI experiments?

As I understand the SETI search program, it is being concentrated
on the "waterhole" frequencies. These are protected for radio
astronomy today, there is no reason to expect that to change
if SS usage becomes widespread (no pun intended).

>5. What about those who want to experiment on the
> electromagnetic and/or carrier rung of the
> OSI model in the VHF and UHF spectrum?

Fine, no problem. A few narrowband signals just don't bother
SS, and SS doesn't bother narrowband signals to any great
extent either (just causes you to turn up the wick a bit
to overcome the average energy expended on your channel, which
is a tiny fraction of the total SS signal's energy). The SS
signal doesn't spend much *time* on your narrow channel, it
is just the response of your narrow filters which spread
(average) that energy over a time significant to your modulation,
IE the filters "ring" in response to the short transient, which
causes your *apparent* noise floor to rise proportionate to the
fraction of the SS signal's energy spent on your channel. If you
are also using wide filters, and correlation gain to achieve an
effective narrow bandwidth, you won't be bothered by a SS signal
anymore than you would be bothered by another narrowband signal
operating several kilohertz away.

>6. What if someone develops a method of monitoring some
> or all of SS traffic? Will he face a jail term or
> fine if he monitors?

I don't know, does he face fines or jail *now* if he monitors
a narrowband transmission? In some cases, yes, under the ECPA.
So what's the difference? The government has seen fit to tell
us we can't listen to certain things, it doesn't really matter
how those things are transmitted.

>7. What if someone is doing EME work with an OOK narrow but
> powerful carrier? Will he be forced to shut down?

Not unless his power bill gets excessive. :-)
Narrowband signals just don't have much effect on SS.
Since the SS signal "dwells" on any given frequency for
such a short time, the narrowband energy contained on
that frequency makes a very small contribution to the
average signal energy correlated by the SS receiver.
With adaptive systems, such channels are simply skipped.

>8. What are the environmental issues with increased RF
> energy raining down on folks in the VHF/UHF frequencies?

Since SS can allow lesser power for a given information rate
than most narrowband techniques used now, why are you sure
there will be *more* RF "raining" down on folks?

>Should amateurs establish cellular circuits just because
>of the success of commercial cellular technology?

No, but amateurs should adopt cellular techniques if it
offers them benefits (and it does in some applications).

>Should
>amateurs establish wide band digital SS circuits just because
>of the promise of widespread commercial success or should
>they be given broad latitude to experiment or develop
>education in any direction their imagination leads them?

The latter of course, but to *ignore* the potential of SS is
a serious error. SS offers benefits more radical than those
offered by the introduction of the crystal filter. It would
be criminal to overly restrict SS just so a few can continue
to play old time analog radio in absolute peace.

>Should we not be suspicious of any technology that claims
>it must have more and more bandwidth and more and more
>control of the VHF and UHF electromagnetic spectrum
>in order to be successful?

Only if we are ignorant of the technology and the benefits
it offers. SS users aren't denanding *control*, just access
to the bandwidth. They're going to use that bandwidth anyway,
either cozying up to your signals with a fat high power narrowband
signal that totally blocks yours, or lightly spread across a wide
bandwidth doing little or no harm to any other user. SS offers
inherent user load management without the artificial restrictions

of "subands" and without the need for formal coordination of
frequencies.

>As someone mentioned previously
>why not force all commercial TV stations onto cable, freeing
>a large portion of the spectrum for LEO use? Many popular
>technolgies got that way because of minimal intrusive impact
>on the life styles of the populace while delivering benefits.
>LEO may be off to a bad start.

Recall that TV broadcasting displaced amateurs off of 5m.
Every new spectrum user places some pressure on some other
user. The advantage of SS is that it doesn't totally displace
other users from that spectrum segment, and its effect on any
one of them is minimal. That is not the case when you plop a
high power analog signal down on a band. It affects those near
its narrow frequency radically.

Note that VHF analog TV *is* going away. It will be replaced
by digital UHF HDTV. That VHF spectrum *is* going to be freed,
and the UHF spectrum used more effectively because digital
HDTV doesn't need the adjacent channel separation distances
needed by analog TV.

As a long time broadcaster, I'm loathe to see broadcast turn
to narrowcasting via fiber, but that's coming anyway. Aside
from mobile users, consumers are better served by guided
waves than broadcast waves. 99.99999....% of broadcast energy
is wasted, radiated where a receiver is *not*. Only a tiny
fraction of that RF is ever absorbed and converted to a picture
on someone's screen. With guided waves, the energy is delivered
to the intended recipient with little waste, and that same set
of frequencies can be *reused* to deliver a different picture
to another consumer next door. Unlike radio, TV is rarely used
in a mobile environment, so it really should be delivered by
a switched cable rather than being blasted through the ether.
Video on demand systems become closer to a marketplace reality
every day. It won't be all that long before even the HDTV
broadcaster shuts down his UHF signal and just becomes another
program provider for the video switches.

I went to Bookstar today to look for some Ham Radio books, I asked the salesperson if they had any and they told me to go look in the Music section, then they told me to look in the television section!

This is crazy! It turned out that three out of four salespeople didn't know what HAM (or Amateur) radio was and the last one finally said that they didn't even have any books on it, but only seven months ago they had a whole section on it.

3096. Is this a place to post offering free parts?

3107. Drake CW Offset

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-09 00:00:00 UTC
From: Dale Carlson <drc@frugal.com>
Message-ID: <31BAB748.5030@frugal.com>
Source record: 223490

My rig is a Drake R-4B/T-4XB. I use it for 40 meter CW.
I was just wondering if there was an easy way to change
the CW offset. It's set at 1000 Hz. This isn't a big deal,
but I'd like to be able to accurately zero-beat with the
other end of a QSO. It would be easier if I didn't have to
drop 200 Hz or so.
How can I change the offset to one compatible with modern
rigs? Sorry if this is a stupid question. I'm taking the
easy way out and asking the group, rather than figuring it
out for myself. But maybe others have already done this.
Thanks.

Even though I didn't get licensed until '76 I was listening to the ham bands back in the 60s - back then there was no tone after one would unkey (except on Art Gentry's AM rptr K6MYK). All the rptrs would quickly dropped off the air after one would unkey - all you would hear is the rptr's squelch tail, then your rcvr's tail: kerchunk kerchunk. Real simple.

The commercial and public safety folks don't have nor seem to need beeps, wonder why the hams do?

TSUNAMI BULLETIN NUMBER 2
ALASKA TSUNAMI WARNING CENTER/NOAA/NWS
ISSUED JUN 10 AT 0514 UTC

..A TSUNAMI WARNING AND WATCH ARE IN EFFECT...
THIS IS A TSUNAMI WARNING FOR THE COASTAL AREAS FROM
KODIAK, AK. TO ATTU, AK., INCLUSIVE.
A TSUNAMI WATCH IS IN EFFECT FROM POINT SUR, CA. TO KODIAK,
AK. THE WATCH AND WARNING AREAS HAVE NOT CHANGED.
AT THIS TIME, THIS BULLETIN IS FOR INFORMATION ONLY FOR
OTHER AREAS OF CALIFORNIA.
AN EARTHQUAKE, REVISED PRELIMINARY MAGNITUDE 7.7, OCCURRED AT
2004 ADT ON JUN 9, OR 2104 PDT ON JUN 9, OR 0404 UTC ON JUN 10.
THE EARTHQUAKE WAS LOCATED 50 MILES SW OF ADAK, AK.
OR 145 MILES E OF AMCHITKA, AK. REVISED AT 51.5N, 177.6W.
EVALUATION: A TSUNAMI HAS BEEN GENERATED WHICH COULD CAUSE
DAMAGE TO THE PACIFIC COAST. TSUNAMI WAVE HEIGHTS CANNOT BE
PREDICTED AND MAY BE A SERIES OF WAVES WHICH COULD BE DANGEROUS
FOR SEVERAL HOURS AFTER THE INITIAL WAVES ARRIVAL.
WAVE HEIGHTS HAVE BEEN RECORDED AT THE FOLLOWING TIDE GAGES:
A WAVE HAS BEEN OBSERVED AT ADAK 50CM/1.6FT.

ESTIMATED TIMES OF ARRIVAL FOR WATCH/WARNING AREAS:
SAN FRANCISCO 0346 PDT JUN 10 YAKUTAT 0005 ADT JUN 10
CRESCENT CITY 0302 PDT JUN 10 CORDOVA 0025 ADT JUN 10
CHARLESTON 0255 PDT JUN 10 VALDEZ 0015 ADT JUN 10
SEASIDE 0303 PDT JUN 10 SEWARD 2353 ADT JUN 9

TSUNAMI BULLETIN NUMBER 001
PACIFIC TSUNAMI WARNING CENTER/NOAA/NWS
ISSUED 10 JUN, 0440 UTC

THIS BULLETIN IS FOR ALL AREAS OF THE PACIFIC BASIN EXCEPT
CALIFORNIA, OREGON, WASHINGTON, BRITISH COLUMBIA, AND ALASKA.

. . A TSUNAMI WARNING AND WATCH ARE IN EFFECT . . .

A TSUNAMI WARNING IS IN EFFECT FOR:
RUSSIA, MIDWAY IS.

A TSUNAMI WATCH IS IN EFFECT FOR:
JAPAN, HAWAII, MARCUS IS., WAKE IS., JOHNSTON IS., MARSHALL IS.

FOR OTHER AREAS IN THE PACIFIC, THIS MESSAGE IS FOR INFORMATION ONLY.

AN EARTHQUAKE, PRELIMINARY MAGNITUDE 7.7, OCCURRED 10 JUN, 0403 UTC.
COORDINATES: LATITUDE 51.7 NORTH, LONGITUDE 178.7 WEST
VICINITY: ANDREANOF ISLANDS.

EVALUATION: IT IS NOT KNOWN THAT A TSUNAMI WAS GENERATED.
THIS WARNING AND WATCH ARE BASED ONLY ON EARTHQUAKE
EVALUATION.

THE ALASKA TSUNAMI WARNING CENTER AT PALMER, ALASKA HAS
ISSUED A WARNING AND WATCH FOR THE EPICENTRAL REGION.

ESTIMATED TIMES OF INITIAL WAVE ARRIVAL AT LOCATIONS WITHIN THE
WARNING AND WATCH AREAS ARE:
MIDWAY,USA 0722Z 10 JUN
HACHINOHE,JAPAN 0833Z 10 JUN
NAWILIWILI,HAWAII 0840Z 10 JUN 2240 HST 09 JUN

Could we all please tone it down a bit before
this thread is reduced do another code vs nocode war?

>, isn't modern
> technology wonderful? If SS can peacefully coexist with NBFM, SSB,
> CW, and NB Data,

Up to a point. SS spreads the actual digital data (whatever
that data may be) out via a pseudorandom bitstream. The data
is "EXCLUSIVE ORed" with the bitstream and likewise, recovered
on the other side. The important point is that this bitstream
is typically ten to 100 times the frequency of the
actual data you are moving. This is what spreads the signal.
But when you DEspread, you typically ATTENUATE any narrow
band signals in the area by a factor of the spreading gain!
The interfering signal appears virtually insignificant.
During despread, you also totally reject any other SS signals
that don't exactly match your pseudonoise bit stream.
That is, multiple SS signals can be transmiting simultaneously
without interference, realizing better spectrum usage than
the best narrow-band techniques (including TDMA, trunking, etc).

Likewise, on the spreading side, you have spread out what
would have been a strong narrow-band signal to a point
that it looks at or below the noise floor (when you
are not literally right next to the SS transmitter).
This prevents interference with the narrow-band folks.

Obviously (I would hope) too much SS can raise the noise
floor so as to make narrow-band signal reception difficult.
JUST AS too many narrow-band signals within an SS signal's
spectrum can overwhelm even the gain inherrent in the
despreading function.

BUT...when the band is largely (or entirely) devoted to SS,
the spectrum reuse well exceeds narrow-band techniques even

with the best frequency coordination. ANd for that matter,
SS with chip-code coordination is better still.

My point is that it is a mode which deserves great attention
by amateur radio. The potential applications are numerous
and I can go into them if you'd like. But it has all
appeared in old issues of QST and other ARRL publications.
The "ARRL Spread Spectrum Source Book", though quite technical
in some areas, has many of these old articles and is well
worth it's $20. I'm guessing SS has been ignored and/or
criticized by many radio amateurs because of what, IMO,
are overley restrictive Part 97 rules, blind ignorance
and/or fear of the mode and the complexity of designing
such gear.

But this is changing. You can whip together a 900/800 MHz
SS handehled with a few off the shelf chips. In the age
of amateur appliance operation, the manufacturers could
easily do this (for those with no time and/or initiative
to experiment themselves) and we could still realize the
many benefits of SS on 70cm and above.

I've seen this abbreviation used on several usenet groups as
an abbreviation for Christian. X fits either as an abbreviation
for a cross, or as the greek letter (which transliterates to
the "Ch" in Christ). Kind of like the abbreviation frequently
seen around December.

In both cases, I generally *prefer* it spelled out -- Christian
and Christmas -- but know of some people who get really offended
by the shortening (since they assume the X to be an insult).

I thought about how that might sound and tried to ameliorate it with
the realatively soft language. However, it is a real issue and it's
something they'll have to consider. It absolutely was NOT a threat,
at least not from me. Rather, it pointed out a potential problem with
these frequencies. If only the most pertubed 1% of all hams, the
worst of the worst, used the radios at their disposal, the LEO's would
be useless. Even though I absolutely would NOT support this activity,
they need to be made aware of the potential for it. Even if the
"bureacrats" reacted violently, hopefully the private industry
representatives would understand the problem and realize that using
these bands is not in their own best interest (i.e. profits).

Kathleen (Chris?) Brown wrote:
>
> ...<article supporting premise that NASA faked Moon landings deleted>

I guess the various news servers expire articles before people see them.

Again, I must ask, what of the many hams who received signals from the ALSEPS packages left on the Moon by the astronauts before they were shut down in 1978 (a very hard thing to fake)?

What of the hams who intercepted communications from the Apollo spacecraft in cis-lunar space (a very hard thing to fake)?

What of the regular laser distance measurements done by McDonald Observatory (among others) that would not be possible without the retroreflectors left on the Moon by the astronauts (unless every astronomer is involved in the conspiracy, how could this be faked)?

What of all the people who saw the Saturn V's lift off? Even though no one was able to watch it (or its bits) all the way to the Moon, the effort of developing and launching one of those was tremendous - why go to that much trouble? Have you ever seen a Saturn V? If not, have a look at one sometime. There are two left (one in Houston and, I believe, one at Canaveral).

A Saturn V could unquestionably orbit its third stage, as witness the Skylab space station (which I saw many times orbiting over where I lived). From low Earth orbit, far less energy is required to accelerate to a cis-lunar trajectory. It is well within reason that a partially fueled third stage could do it.

While it's possible that all the above are part of a large conspiracy or faked with unmanned vehicles, at some point it becomes easier to do the actual event than fake it!

Besides, the government has great difficulty in keeping relatively small secrets. Given the number of people who would have to have been involved in such a large hoodwink, I cannot imagine how they would have kept it secret for so long.

Have you seen those photos in the book that are supposed evidence against a manned Moon landing from any source other than one book from an obscure source by an author using an alias being marketed by a man who is obviously taken by fringe material?

Treat all claims skeptically. Seek the motivation. Use more than one source of information. Apply Occam's Razor. Do the math. Weigh the

probability.

Cheers,

Chris.

3128. HTX 202 Error message???

If you are referring to the packet network, I might buy
the design part, I'm a little shakey on the deployment
part, but 'administration' is something that is so poorly
lacking that it makes the technology useless. In order to
be useful, technology need to have a purpose - technology
for technology's sake is just a waste of resistors.....

There are some people who just _can't_ put aside their differences to enjoy
a common hobby. So, any ham radio club open to the public at large is likely
to include a number of bigots who will more or less actively pursue the
targets of their particular hatred. To the extent that the group at large
tolerates the activity of the bigots those who are thus targeted are likely
to withdraw (or be driven out). Given that they want to participate in a
ham radio club the reasonable approach would seem to be to form a club that
explicitly welcomes those excluded from the majority group.

>other activities such as bluegrass music, bird watching, also am single,

Well, how many banjo-picker bashers are there in your ham radio club?
If there were some, and most of the members of the club tolerated their
attacks, then what?

I think that CW is a great asset and we should keep it alive, the FCC should continue to make CW a requirment, and for the people that don't want to do it, or can't do it (other than disabled) should stick with the Tech No-Code.

It is good to know CW in emergencies and in bad weather conditions when phone just won't cut it!

That is very true. But U.S. stations have a bad image also. Maybe not
as bad as Europe, but bad none the less. The behavior of any group of
DX'ers seems to be based on how rare the DX is they are trying to
work. The more rare the DX, the worse the behavior. There is only one
group of hams that have a good image DX wise, these are the Japanese
hams and that goes rite out the window if the DX is rare.

>There are some questions comming into my mind:

>1. How do you feel and what you are thinking about this very bad image of
> the Europeans (you: as an European or as a none European)?

I don't think about it a lot, but I usually try and avoid band
openings to Europe.

>2. Do you believe that all Europeans do have this bad image or a few from
> a limited region in Europe only?

Some regions are much worse than others. The UK hams seem to be
a bit more polite than the average European. The Italian operators
are by far the worst in Europe, maybe the worst in the world.

>3. You know, Europe is a continent with many more or less very different
> countries and each country has an independent national radioclub. Are
> you able to characterize the HAM's from different European countries,
> especially their behavior in a pile up?

See above.

>4. What do you believe are the reasons for this bad image?

Bad image stems from bad operating habits.

>5. What can and should you do to change this bad image? (you: as an European
> or as a none European)?

Not much I can do, but I did put Italy on my deleted country list.
Crowd control via radio is a very difficult operation, even for the
most experienced DX operator.

>6. What can and should the European national radioclubs do to change this
> bad image?

Teach people manners that apply to ham radio. Unfortunatly it is
difficult to teach people manners that apply to ham radio if they
haven't already learned manners that apply to life.

I'll crosspost this reply to rec.radio.amateur.dx, maybe you will
get some more responses from that group.

Ham licensing in India:

As I remember of the top of my head, there could be
some mistakes though. I have the rule book back at home and
could give you further details if needed.

Types of licences:

1. Short Wave Listener's Licence (SWL)
obtained by applying, must submit
proof of having listened to at least 40
2 way ham contacts during a year to renew
licence. This licence basically allows
one to keep a communication rx and listen
to the amateur communications only. Unlike USA,
using scanners to monitor anything other than
broadcast is illegal in India.

2. Grade II, theory (Rules + Radio communication)
+ 5 WPM morse code (both Rx + Tx). Does not have
access to voice communication on HF by default.
Have to submit proof of having made 100 2xway
CW only contacts before voice endorsement is
given on HF.

3. Restricted Class, same theory as #2, No code.
Operation restricted to VHF and above. Grade II
examinees who fail in morse can apply for this
class of licence too.

4. Grade I, theory (Rules + Radio communication)
+ 12 WPM Morse. (both Rx and Tx).The theory

exam. is tougher than item #2. Allows you to
use more power than #2.

5. Advanced, Same morse requirement as #4 but theory
is tougher than #4. Infact grade Is can sit only
for the theory part to get advanced class. Allows
you to use more power than #4.

Notes:

1. You can directly appear for any class of exam. you like.
Need not start from Grade II or SWL.

2. #2, #4, #5 they all have access to the same bands and frequency
limits, only TX power limit varies.

3. bands are,

160 M (partial & shared), 80M (partial& shared),
40M (7.0-7.1), No 10 Mhz (mostly aeromobile control stations
in this region, amateur lobby is not very strong and
hence they won't move these stations). 20M (14.0 -14.350),
18.068-18.168, 15M, 24Mhz, 10M (28 to 29.7), No 50 Mhz.
But a special permission could be obtained by Advanced Class
Licence Holders for a 3 month period. 144-146 Mhz, No 220 Mhz.
70cm but not as wide as in USA. 1.2Ghz.

4. Allows reciprocal licensing with the coutries having agreement
(USA is in the list), have to take a VU callsign though.

5. Call signs VU3XYZ - grade II
VU2XYZ and VU2XY - grade I and Advanced levels

I have recently purchased a Ranger "RCI2950" from a company in Oshawa Ontario. They have informed me that the guts of the present 2950's are different from the units which were manufactured a year ago. The modifications have changed for this radio.

Would someone out there have the up-to-date mods for these units. I have checked the Oakland Archives and the Ranger 2950 mods posted are out of date.

Thanks

Wayne

>
>After reading the Forbes article on Teledesics, IMHO, the LEO
>promoters and their agents could care less about weak signal
>operators.

I'm sure they don't. I was talking about the possibility of *amateur* SS
coexisting with weak signal operators. The little LEO system being proposed
by Gates and McCaw is TDMA, not SS. Like our current pacsats, it will require
exclusive spectrum (unless *we* use SS exclusively, and note I am *not*
suggesting that as a preferred option, but it *could* work).

>>>2. What about deep space radio astronomy?
>>
>
>> The farside

>a radio astronomy moon receiver, when did we learn to communicate
>economically with the farside of the moon? Far out! (no pun intended).
>Maybe we should put a constellation of satellites around it too.

Indeed, that's a possibility, though a single satellite at the L4
point will do (but a fiber link run around the limb of the Moon
would be best because it keeps *all* emitters away from the farside).
Note that the proposed little LEOs aren't going to be using any
frequencies currently reserved for radio astronomy, so this is at
best something for the future, and is responsive to the cuumulative
RF pollution radio astronomers already face rather than addressing
this particular little LEO proposal directly.

>>>3. What about a band of frequencies set aside
>>> for responsible personal experimentation and
>>> education, protected from SS noise?
>>

>>Huh? For the most part, personal experimentation and education

>CW, and NB Data, then what is the fuss all about? Just let the LEO's
>SS weave in and share the business band, the TV guard channels, aviation
>bands, military, etc. Problem solved.

Except that Gates and McCaw aren't proposing to use SS. TDMA *can't*
coexist with those other uses. That demands *exclusive* use of
frequencies. They have no intention of *sharing* the bands with
amateurs. If they were planning to use SS, then they could "squeeze
into the cracks" between other users without significant impact.

>>>5. What about those who want to experiment on the
>>> electromagnetic and/or carrier rung of the
>>> OSI model in the VHF and UHF spectrum?
>>
>>Fine, no problem. A few narrowband signals just don't bother
>>SS, and SS doesn't bother narrowband signals to any great
>>extent either (just causes you to turn up the wick a bit
>>to overcome the average energy expended on your channel, which
>>is a tiny fraction of the total SS signal's energy).
>
>There is that marvelous technology again! See response to number 3.

It is marvelous technology, and the military developed it because it
is *very* resistant to jamming by narrowband signals, or even other
SS signals with a different spreading code. They also developed it
because of its low probability of intercept, IE it is hard to detect
on narrowband equipment, so it presents very little interference
potential to narrowband users. There is a near-far relation, but
that works mostly to the benefit of the narrowband user since most
emitters will be far.

>>>6. What if someone develops a method of monitoring some
>>> or all of SS traffic? Will he face a jail term or
>>> fine if he monitors?
>>
>> In some cases, yes, under the ECPA.
>>So what's the difference? The government has seen fit to tell

>
>Most folks think the ECPA is bad legislation passed to, among other
>things, stem the panic of cell phone users, realizing that their
>conversations could be heard all over town, but it's essentially
>not enforced. IMHO, all wireless transmissions can be intercepted

>and decoded (illegal for the masses but OK for the FBI, maybe).
>Only fiber offers a chance of secure channels.

And even that can be tapped (though that's nominally illegal without a court order). The law doesn't care *how* we do it, it just doesn't want us to do it at all, so discussion of methodology is irrelevant. I'd suggest also that *most* folks *don't* think that the ECPA is bad legislation. *Most* folks want privacy in their phone calls, and *most* folks think that the ECPA gives them some measure of that. Certain bands of outlaws with a peeping Tom complex think that they know better, but they are in the distinct minority. It is true that a robust scrambling system would have been a better approach than a law, but that's just techie talk and doesn't mean anything to *most* people.

>>>7. What if someone is doing EME work with an OOK narrow but
>>> powerful carrier? Will he be forced to shut down?
>>
>>Not unless his power bill gets excessive. :-)
>>Narrowband signals just don't have much effect on SS.
>>With adaptive systems, such channels are simply skipped.
>
>I don't know where Dave Sumner gets his facts, but his quote
>in the RAC packet newsletter infers EME can bother the LEO's.

It can more than bother them, it can kill them, because they're to use TDMA, not SS. Put a strong carrier on their receive frequency, and they're dead in the water. The carrier doesn't even have to be that strong, 50 watts will do nicely. That's why they have to get rid of amateurs on the bands.

>Why don't we do the math? For starters what is the current
>best synchronous frequency switching speeds and what are the
>data carrier frequencies?

Several hundred megahertz in some current military systems, but that spreads the signal wider than we could use on VHF of course. For VHF, we'd have to keep the spreading code rate under 2 MHz to stay in the 2m band, under 15 MHz to stay in the 70cm band. That's simple, well within the amateur SOTA.

>What is the min. power density goal
>for earth receivers and for the satellite receivers?

Their proposal is TDMA, so the link budget is similar to current pacsats. If they were using SS with a spread of 4 MHz, however, then the power density on any given Hertz in that spectrum would be -66 db down from total transmit power. Try to hear a pacsat with a 66 db attenuator in front of your weak signal receiver to get an idea of the level of interference you'd suffer.

>Has the
>design critera for the circuits been established? Will they
>use the CCITT X400 protocol? What is the control-to-data
>overhead for this one?

I haven't seen anything on that, though I sincerely doubt they'd
be using X400. They'll probably use some proprietary Microsoft
protocol stolen from some other service and changed just enough
to be incompatable with any existing standard.

> any info most appreciated.

Charge at a current of Ah capacity divided by 10 hours for 14 hours. The AA's come in 1100mAh and 1200mAh and these would charge at 110 mA and 120 mA respectively.

Important warning: these are rated to operate at a 3.6A maximum discharge rate and when shorted can pass several times this. So if you use them in place of Alkalines or Zinc Carbons, you MUST ensure that the system is fused or you may have your 4th of July a month early. An HT is a very expensive fuse.

I have a Kenwood that I have been controlling through a serial (com) port on my PC laptop. Just recently I installed a TNC and a logging software package that works off my local DX cluster. If a DX spot comes through that I am interested I can click on the spot as it shows up on the logging program and then have the RC program move the receiver to the proper frequency and mode. This all sounds pretty neat but... My laptop only has 1 serial port 1 parallel port and a PCMCIA slot. Since I need 2 Com ports to pull off the neat operation described above, does anyone know of a PCMCIA card that will allow a second com port or for that matter any other work around.

Thanks,

Richard

One of the only reasons I would go into any of the area's RS stores - and only that one - was that the manager was a ham, and a member of our local club. He got demoted back to salesman and reassigned to a store with probably fewer customers, then was dismissed.

This leads me to believe that RS could care less about the technical background of its employees. Being a retail outlet, sales is the bottom line.

3150. New York Governor Proclaims "Amateur Radio Week"

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-10 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BZPvLBo.sanderman@delphi.com>
Source record: 223383

I am pleased to announce that the Governor of the State of New York has issued a proclamation commending amateur radio operators, recognizing Field Day, and designating June 16-23, 1996, as "Amateur Radio Week". Please give this bulletin the widest possible distribution on nets, during bulletin announcements, through the National Traffic System, and on AX.25 packet forwarding systems throughout New York. The official text of the proclamation is included herewith.

Thanks and 73.
Stephan Anderman, WA3RKB
ARRL ENY Section PIC

State of New York

Executive Chamber

The State of New York has more than 37,000 licensed amateur radio operators who have demonstrated their value in public assistance by providing emergency radio communications.

The Amateur Radio Operators provide educational opportunities for young people through the Shuttle Amateur Radio Experiment, which brings the voices of space shuttle astronauts into our classrooms. They donate these services free of charge to federal, state and local emergency service agencies in the interest of the citizens of the Empire State.

Amateur Radio Operators are on alert for any emergency, local or worldwide, and practice their communications skills during the American Radio Relay League's field day exercise.

This year's amateur radio field day will take place the weekend of June 22-23, 1996.

NOW, THEREFORE, I, George E. Pataki, Governor of the State of New York, do hereby recognize June 16-23, 1996 as

AMATEUR RADIO WEEK

in recognition of this important emergency preparedness exercise and call upon all citizens to pay tribute to the amateur radio operators of the Empire State.

/s/
George E. Pataki

Governor

3151. Problems with MFJ-949E

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-10 00:00:00 UTC
From: Connie Hulst <chulst@polar.polarcomm.com>
Message-ID: <31BCA43C.22E4@polar.polarcomm.com>
Source record: 223384

I have had some quite severe problems with losing the diodes in the MFJ-949E (I think that's what it is) antenna tuner. It seems to me that the static electricity building up on my dipoles destroys the diodes (the static is quite severe.) However, several other hams in my club have 949s and never had this problem.

The diodes were 1N34 originally, but I was later told to try 1N4148 diodes (which work just as poorly). Kind of inconvenient having to take apart the whole tuner every month to change the diodes ;) any suggestions?

Nick Hulst, AA0VY, regardless of what the message header says chulst@polar.polarcomm.com

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z JUNE 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 JUNE AND FORECAST FOR 11 JUNE - 13 JUNE

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 09 Jun
Daily Proton Fluence >1 MeV: 6.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.7E+05 (normal)
X-ray background: A1.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Jun 12 Jun 13 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Jun: 70/5
COMMENT: Solar region No.7968 decaying, no M flares expected.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 09 Jun
Learmonth 5 2222 1111
Fredericksburg 8 4
Planetary 5 4

Observed Kp for 09 Jun: 1010 2122

2B. MAGNETIC FORECAST
Date Ap Conditions
11 Jun 8 Quiet to unsettled
12 Jun 8 Quiet to unsettled
13 Jun 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
10 Jun Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
11 Jun Normal Normal Fair
12 Jun Normal Normal Fair
13 Jun Normal Normal Fair
COMMENT: Slightly degraded HF comms may have been experienced
during local night hours.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
10 Jun 13

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for June: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
11 Jun 10 near predicted monthly values
12 Jun 10 near predicted monthly values
13 Jun 10 near predicted monthly values
COMMENT: Spread F observed during local night.

So tell us Duffy, where do you get your components for the projects
you build? [You are doing some building, yes?]

My favorite source is old TVs and radios that folks toss out. I've
go enough parts to fill a store!

Jeff KH2PZ

P.S. Duffy, have you ever given anyone jewelry? Want to guess the mark up
of such items?

>PE1OTP @ PI8SHB

No. In the US they can experiment to their hearts content on 6M and up.
Also, antenna experiments can be conducted on the HF citizens' band. And
the 1750M band (refered to as "The experimenters band") is great for
xmtr and ant projects. Actually, Part 15 gives the experimenters a
wide latitude of MF and HF frequencies to use license-free.

Jeff KH2PZ

P.S. Bob, I realize you're not in the US, but doesn't your country at
least have code-free VHF license?

Insulated antenna wire would help. I solved the problem with a
balun. If a balun or unun has a near DC short across the
feedline, the static electricity will be discharged before it
can destroy the diodes.

Tony , Concerning NiMHydrate batteries , I recently was told that
this type of battery doesn't like fluctuating loads and hence would
not be all that suitable for rx/tx applications ie its effective
capacity would be less than 1100mAH. Can you confirm this .
I use AA NiMH batteries in a Garmin GPS-40 device.

From: bobw@col.hp.com
Message-ID: <4pfujm$ma6@nonews.col.hp.com>
Source record: 223431

COLORADO 14ER RADIO EVENT ANNOUNCEMENT

The 1996 Colorado 14er Radio Event will be held Sunday, August 25th. During the event, a group of amateur radio operators will operate portable from the summits of various Colorado 14000 foot mountains. The operating times will be from 9 AM to 12 Noon local time.

Radio amateurs are encouraged to work as many of the mountaintop stations as possible. However, this is NOT A CONTEST, no points are awarded, no scores recorded. A special event QSL card can be obtained by QSLing to the mountaintop station's home QTH (please include a Self-Addressed Stamped Envelope). Most mountaintop stations will be running low power handheld radios. To reduce QRM, PLEASE DO NOT USE HIGH POWER (more than 50 Watts) and do not call 14er stations unless you can hear them.

Radio operators with 14er hiking experience who wish to participate should contact Bob, KB0CY at (719) 488-0859 or bobw@col.hp.com. To avoid having multiple stations on the same peak, radio amateurs that want to participate must coordinate with KB0CY.

Frequencies used during the event:

146.43 MHz Longs Peak
146.46 San Juan Range (Handies, Redcloud, ...)
Sangre de Cristo Range (Crestone, Humboldt,...
146.49 Bierstadt, Grays and Torreys
146.55 Coordinating Frequency
(Net Control, Pikes Peak)
146.58 Mt. Evans
147.42 Elk Range and North Sawatch Range
147.45 Mosquito Range (Quandary, Lincoln, ...)
147.48 South Sawatch Range (Huron and peaks south)
147.51 Pikes Peak (QSOs)
147.54 Reserved for Mountaintop Stations Only

223.5 Primary 222 MHz frequency

446.000 Primary 70 cm frequency
446.025 Alternate 70 cm frequency
446.050 Alternate 70 cm frequency

52.525 Primary 6M FM frequency

Other bands/modes: standard calling frequencies

3164. Re: Problem with the name of "rec.radio.swap"

[I missed the original...so I'll reply to both Jeff and Erik here.]

In article <DsJs6z.6pn@news.hawaii.edu> jherman@Hawaii.Edu (Jeffrey Herman) writ
es:
>Jim mentions the name "rec.radio.swap" - talk about a misnamed group!
>Swap means to exchange items. There is *very* little exchanging of
>radios taking place on there.

Give me an expurgated break. Do you picket swapfests because very little
swapping, according to your definition, goes on inside? I just got back from
Ham-Com, which has one of the biggest swapfests around; I bought a radio and
sold some computer stuff...are you telling me I shouldn't have done it the
way I did, which involved selling and buying instead of swapping?

On Fri, 7 Jun 1996 18:02:47 GMT, Erik K.Sorgatz <sorgatz@avatar.tti.com> wrote:
> GOOD POINTS! And better than 50% of the postings are for used

>that the equipment be type-accepted, or certified for use by the FCC or
>it's equivalent agency."

Unenforceable except by the method already possible: flame them, and point
them to A Guide TO Buying and Selling on Usenet, posted to rec.radio.swap
(and *.answers) monthly, which already discourages such postings. One
request, though: If you're going to do this, PLEASE sign your name to it!

After reading the Forbes article on Teledesics, IMHO, the LEO
promoters and their agents could care less about weak signal
operators.

>>2. What about deep space radio astronomy?
>

> The farside
>of the Moon is frequently suggested, but a radio telescope in solar
>orbit would also be better than an Earth based one

Assuming the tariffs on LEO traffic could raise the funds to install
a radio astronomy moon receiver, when did we learn to communicate
economically with the farside of the moon? Far out! (no pun intended).
Maybe we should put a constellation of satellites around it too.
>
>>3. What about a band of frequencies set aside

>the other is minor.

On the chance that your opinion represents the facts, isn't modern
technology wonderful? If SS can peacefully coexist with NBFM, SSB,
CW, and NB Data, then what is the fuss all about? Just let the LEO's
SS weave in and share the business band, the TV guard channels, aviation
bands, military, etc. Problem solved.
>

>
> In some cases, yes, under the ECPA.
>So what's the difference? The government has seen fit to tell
>us we can't listen to certain things, it doesn't really matter
>how those things are transmitted.

Most folks think the ECPA is bad legislation passed to, among other
things, stem the panic of cell phone users, realizing that their
conversations could be heard all over town, but it's essentially
not enforced. IMHO, all wireless transmissions can be intercepted
and decoded (illegal for the masses but OK for the FBI, maybe).
Only fiber offers a chance of secure channels.

>>7. What if someone is doing EME work with an OOK narrow but
>> powerful carrier? Will he be forced to shut down?
>
>Not unless his power bill gets excessive. :-)
>Narrowband signals just don't have much effect on SS.

>With adaptive systems, such channels are simply skipped.

I don't know where Dave Sumner gets his facts, but his quote
in the RAC packet newsletter infers EME can bother the LEO's.
Why don't we do the math? For starters what is the current
best synchronous frequency switching speeds and what are the
data carrier frequencies? What is the min. power density goal
for earth receivers and for the satellite receivers? Has the
design critera for the circuits been established? Will they
use the CCITT X400 protocol? What is the control-to-data
overhead for this one?

Jeffery, You are quite correct in your opinion that Tim should be careful to post facts as opposed to hype. However your rather broad handed swipe at campus law enforcement is in itself hardly factual. Most colleges, especially those located in major citys, have more than there fair share of crime. Far more than most small towns of comparable population. If they do not, its usually due to the work of the police or security assigned to these campus.

As a young police officer I was once told by a state court judges clerk that I brought more felony cases before the court than any other agency in the area, at that time. Believe it or not. We return this newsgroup to its regular Ham oriented discussion. Thanks.

Not a good idea. Bureaucrats tend to react violently to blackmail threats,
real or not.

Personally, I would have thrown in a reminder that 2m and 70cm require
antennas that are much larger than those used for most low-earth-orbit
applications, meaning that the use of these bands for "little LEOs" would
unnecessarily burden the user stations.

Do the LEOs =really= need a worldwide allocation? If the satelites have a small footprint, and several bands were available, the satellites could switch bands as their footprint moved over the planet. A bit of compuer needed, no doubt, but that's easy (and getting easier). More bands mean more radio in the satellite (heavier), but also more flexibility with harmonics and interference?

Just a quick thought.

The warranty is transferable; it goes with the product regardless of how many times it changes owners. If your local store is "too busy" to look it up, e-mail me the previous owner's name and zip code (that's how the warranties are filed) if you don't have the original receipt. I'll then call the center, get you the warranty number and expiration date, and e-mail it back to you.

Look I don't see anything wrong with him announcing that the new version of the CD is out. HOW MANY times have there been other people posting messages about things that have nothing to do with ham radio or radio in general? And I don't see anyone bitching about those posts! How many times does AMSOFT post the messages about the CD release? 3-4 times ayear. Mean while I know for a fact that there are 2 or 3 people that post messages ever 3-4 weeks of the same stuff. And it isn't anything new that we don't know already. Fine about the posts about the band conditions and all. But when someone announces that they have software to give out and it's the same thing week in and week out. I don't see anyone spamming those people.

3179. A pile up and the "Ugly European"

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-10 00:00:00 UTC
From: kebsch@pdb.sni.de
Message-ID: <4pgs48$dqa@nervous.pdb.sni.de>
Source record: 223447

Hello,

when it comes to a discussion about the behavior of some HAM's in a pile up,
then in the world wide DX community the Europeans do have a very bad image.

There are some questions comming into my mind:

1. How do you feel and what you are thinking about this very bad image of
the Europeans (you: as an European or as a none European)?

2. Do you believe that all Europeans do have this bad image or a few from
a limited region in Europe only?

3. You know, Europe is a continent with many more or less very different
countries and each country has an independent national radioclub. Are
you able to characterize the HAM's from different European countries,
especially their behavior in a pile up?

4. What do you believe are the reasons for this bad image?

5. What can and should you do to change this bad image? (you: as an European
or as a none European)?

6. What can and should the European national radioclubs do to change this
bad image?

Because I am thinking we should have an open discussion about this affair,
please respond with a "follow up", if possible. But, if you want to let me
know your opinion private only, then feel free to send me an e-mail ("reply").

To all radio amateurs

SB QST ARL ARLB038
ARLB038 FCC closes sites

FCC closes monitoring stations, field offices

As part of a previously announced restructuring of its Compliance and Information Bureau, the FCC has closed 12 HF spectrum monitoring stations and six district offices, effective May 29.

The monitoring stations shut down were in Belfast, Maine, Powder Springs, Georgia, Vero Beach, Florida, San Juan, Puerto Rico, Allegan, Michigan, Kingsville, Texas, Grand Island, Nebraska, Anchorage, Alaska, Douglas, Arizona, Livermore, California, Honolulu, Hawaii, and Ferndale, Washington.

District offices closed were in Buffalo, New York, Norfolk, Virginia, Miami, Florida, Houston, Texas, Portland, Oregon, and St Paul (Maplewood), Minnesota.

The FCC says ''a downsized professional staff'' will remain in Buffalo, Norfolk, Miami, Houston, Portland, St Paul, Anchorage, Honolulu and San Juan.

The FCC is replacing its HF monitoring stations with ''advanced, automated equipment'' that will remotely control monitoring sites from an operations center in Maryland. The FCC also plans to install a nationwide toll-free call center, and service is scheduled to begin on a regional basis this month. Until the nationwide toll-free service is available, the FCC says people may call one of the remaining district offices for assistance. Here's a list of service facilities for localities where FCC offices have been closed:

Allegan, Michigan: Detroit District Office, 810-471-5924.

Anchorage, Alaska, Ferndale, Washington, Portland, Oregon: Seattle District Office, 206-821-9037.

Belfast, Maine: Boston District Office, 617-770-4023.

Douglas, Arizona: San Diego District Office, 619-467-0549.

Grand Island, Nebraska, Norfolk, Virginia: Kansas City District Office, 816-353-3773.

Honolulu, Hawaii, Livermore, California: San Francisco District Office, 510-732-9046.

Houston, Texas, Kingsville, Texas: Dallas District Office, 214-235-3369.

Miami, Florida, San Juan, Puerto Rico, Vero Beach, Florida: Tampa District Office, 813-348-1508.

Powder Springs, Georgia: Atlanta District Office, 770-279-4621.

St Paul, Minnesota: Chicago District Office, 847-298-5401.

Individuals needing FCC forms or other documents should call the FCC's Forms Distribution Center at 800-418-3676.

From ARRL Headquarters
Newington CT June 11, 1996
To all radio amateurs

SB QST ARL ARLB039
ARLB039 Vanity calls issued

First vanity call signs issued.

The FCC has issued the first call signs under the new vanity call sign program. Gate 1, which permits licensees to get back former individual or club call signs or the former call sign of a deceased close relative, opened May 31, 1996.

Among the first out of the gate were Mark Mandelkern, K5AM (ex-KN5S), Ronald Allen, W3OR (ex-AA3NF), John Webster, W6RM (ex-WA6L), Frank Eldredge, W7GGR (ex-N7BRG), Charles Coldwell Jr, WB5CTQ (ex-KC5EBG), John Santucci Jr, WB9JVM (ex-WD4FMN), Signe Twardowski, W3IIJ (ex KC7QFI), Wendell Davis, W1HSO (ex-N1GJW), and Ernest Evans, W8RWS (ex-N8ELO). The FCC also issued several new club station call signs.

The FCC reports it received more than 350 first-day applications. But 85 applications were filed too early and were returned to applicants for timely resubmittal. Gate 1 remains open for applications indefinitely. The FCC has not yet announced opening dates for the other filing gates.

fedpress@omnifest.uwm.edu (Rick Kissell) writes:

>Does anyone have a QSL bearing an old cartoon (perhaps from the "There Oughta
>Be a Law" strip, but I'm not sure) on the theme of "Pity the poor ham radio
>operator"? It showed hams being blamed for everything under the sun (TVI,
>etc.).

It was from "Hatlo's 'They'll do it everytime'" cartoon strip. My elmer had
a copy of it on his shack wall.

Showed a ham getting blamed for all sorts of things in the neighborhood
including "I hear he's even messing with the Doctor's diathermy machine!"

As they'd say, "And a tip-o-the-hat to Roland Peebles, WB6BPY"

73 es GM from Jeff

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z JUNE 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 JUNE AND FORECAST FOR 12 JUNE - 14 JUNE

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 10 Jun
Daily Proton Fluence >1 MeV: 5.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.2E+05 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Jun 13 Jun 14 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Jun: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 10 Jun
Learmonth 4 2122 1111
Fredericksburg 5 6
Planetary 5 5

Observed Kp for 10 Jun: 2202 2221

2B. MAGNETIC FORECAST

Burt Fisher wrote:
>
> the holocaust to take place. The author shows the ingrained deep hatred
> for Jews that Germans had for Jews before Hitler came to power and that

Just a few facts, and I wonder, if you could figure out the WHY..

(1) Did you ever notice, that most people of the jewish faith have uniquevocal GERMAN names? Did you ever waste a thought, why that may be this way? Rosenzweig, Goldstein, Goldhagen ... all these names make sense, when you look them up in a German->English dictionary.

How comes, that just those surnames, that are deemed "to be jewish names" are actually German names?

How can that be, if "the ingrained deep hatred for Jews that Germans had for Jews before Hitler" were fact and not fiction?

Wanna know the answer?

The answer is, that Germany before those dark 12 years had been among the most tolerant and most liberal countries in this world. People persecuted in other countries for their political and/or religious beliefs not only went to America, more often than that they went to Germany.

(2) Germans understand Yiddish, the majority of jewish people understand German..... How comes?

The answer is:

Yiddish is just a German dialect, though quite a number of jewish non-Germans possibly might see it differently. But then "Yiddish" derives from "Juedisch", which is German for "Jewish"...

(3) After the spook of Nazidom had ended, a considerable number of Germans, who fled Germany for their jewish faith, returned to Germany. Why would they return to the country of deeply ingrained hatred against them???

Do you know the answer?

Germans they were before those twelve years, Germans they remained in their hearts even abroad. They simply loved their country Germany, though for you, Burt, "being German" and "being Jewish" might seem to be in opposition to each other,...

But then, it is just a fiction created by the Nazis, and carried on
by potential Nazis like you. With the mindset that you display, Burt,
you would have fitted the Nazi requirements exactly. "I was told so"

"German" is a nationality and an ethnic background.
"Jew" is a reference to a religious creed.

In World War I, lutheran Germans, catholic Germans and jewish Germans
fought and died side by side in the war fields of Flanders and around
Verdun. And nobody gave a damn about their religious beliefs. They all
fought as Germans. Period.

Putting "German" and "Jewish" into opposition,
is like claiming "American" and "Catholic" were in opposition....

> there was a widely held shared view that the the Jews ought to be
> eliminated in some way from German society. When Hitler, ultimately,

Widely held shared bull shampoo...

> > Of course those Germans NOT alive during World War II cannot be held
> > responsible. But I refuse to respond to German "CQs" because I feel the
> > mindset of Germans even today would allow a repeat of the holocaust if

The mindset you describe, Burt, is your own mindset. Unfortunately, it
has some blockheads of that mindset in Germany, too. But believe me,
they are just a minority like you are in the USA.

> > the only could find another Hitler. This was shown during the recent
> > Gulf war when Germany was the one selling weapons and materials to make
> > poison gas to Iraq....

(a) It was not the German government, but criminal personalities in some
German companies.
(b) It did not happen during the Gulf War, but before
(c) Iraq had no weapons that were sold to it by the GErman government.
Actually it had nofunctioning GErman weapons at all, neither legally
sold one nor illegally sold ones.
(d) Iraq sported quite an arsenal of American weapon, given to it free
by the U. S. Government earlier, when the fear of Mullahs prevailed
in Washington and led to a total misperception of who Saddam Hussein
might be.
(e) The crooks in Germany were prosecuted and serve jail terms.
(f) Any idea, what happened to the crooks in Washington?

> > Surely there are some caring decent German people that would resist

There had been some. I would want you to visit the Dachau concentration
camp near Munich, and please, take an interpreter along with you. There
were Germans, who resisted in the bureaucracy, who dared investigate and
initiate prosecution of the Nazi murders ... and who in turn were murdered
for thei civil courage, too.

> > another Hitler and another holocaust but there are too many Germans just
> > waiting to finish what Hitler started....

What is your imbecillence quotient?

logging programs available from the ARRL FTP sight.
http://www.arrl.org/quick.html#ARRLFTP, look under
hamradio/arrl/bbs/contests/fd1200f.zip; fdall.zip; fdlogger.zip;
wr9r_302.zip. A couple of others that you might find useful
/hamradio/arrl/bbs/programs/geoclk51.zip " a gray line determination
program" or dxhelp.zip "ms-dos radio propogation aid" hope this helps.
Let me know how you do on field day. 73 Bill

[982]

The following is a closed circuit advisory. According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation over the summer months. As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you. If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.
Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.
The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 982, for release on Friday, June 7, 1996 to follow.

The following is a QST

A ham radio protection bill dies in Wisconsin and a well known magazine learns not to say bad things about ham radio. These stories and more on

Newsline report number 982 coming your way right now.

(*****
WISCONSIN PRB-1 BILL DEAD FOR NOW

A busy legislative agenda and political infighting are being blamed for the failure of a bill in the Wisconsin legislature that would have gone further than PRB-1 in limiting local control over Amateur Radio antennas. SB-544 had state Senate approval. Supporters had hoped to get approval of the state Assembly during a brief special session, but it never made it to the floor.
According to Gary Schwartz, K9GS, who tracked the proposed legislation, the bill would have prevented localities from restricting ham radio towers on the basis of height or aesthetics, unless there was a specific health or safety concern. The bill also would have kept localities from enacting laws affecting placement, screening or height of Amateur Radio antennas if the ordinance or resolution is based solely on aesthetic considerations. SB-544 was modeled after existing provisions of Wisconsin law that restrict localities from regulating certain satellite TV antennas. Supporters have vowed to try again next year.

(*****
MORE ABOUT 2 METER & 70 CM FREQUENCY GRAB

Radio amateurs continue to respond en masse to an unprecedented proposal hams say could be catastrophic to the amateur radio service. The call to action comes over an Informal Working Group's refusal to remove the 2 meter and 70 centimeter ham bands from a list of frequencies being considered for shared access with a commercial mobile satellite service.

"This is a fight that we intend to win." K1ZZ

David Sumner, K1ZZ, is Executive Vice President of the American Radio Relay League.

"We would like to think that the industry would understand that these bands simply aren't available for commercial use. Unfortunately that message hasn't sunk through yet. So at this stage I have to characterize it as a real threat." K1ZZ

The Working Group's efforts are part of preparations for the World Radio Conference '97. One of the items on the Conference Agenda is to find additional frequency allocations for so called Little LEO's, or low earth orbiting satellites. Warren Richards is Chairman of the Working Group.

"We do not have in mind to take spectrum away from radio amateurs service. That is not in the cards." Richards

Richards sez amateurs have the wrong picture about the Committee's assigned task.

"There are no limitations on the charge that was given to us by the FCC, it was look under 1 Gigahertz. And from a practical matter, we have to look above 100 Megahertz otherwise the allocation is not as useful to the

mobile satellite service. So we are looking at all the spectrum below 1 Gigahertz." Richards

Richards' group is studying possible bands for sharing with the satellite service, with recommendations to be turned over to the FCC by November 15th.

"And maybe the study is gonna say this is absolutely foolish. Fine. Maybe the study sez under certain conditions, if you have a ground station with, and you limit the radiation to above a certain elevation angle, that you can protect the amateur service. I don't know what the studies are gonna say." Richards

Satellite service proponents say they need 10 more MegaHertz of spectrum. When the Working Group included the amateur 2 meter and 70 centimeter ham bands on its proposed list of candidate bands for sharing, the League asked for assurances that the bands would be stricken from the list. When the Working Group did not provide that assurance, the League issued its call to action. Again, the League's David Sumner:

"I think that they believe that their technology can coexist with what they understand we do in the bands. And so, in the sense that their understanding of what we do in the bands is maybe a little short of reality, I think that it's that, the problem is simply a lack of understanding." K1ZZ

Many hams are worried about the possible impact shared access could have on their emergency communications efforts. Sumner sez those concerns are justified:

"I don't see how we could satisfy our public interest, the operating requirements without having access to these two bands." K1ZZ

Sumner is asking hams to send written or FAXed messages to members of the Working Group. And that's just what they've been doing. Warren Richards sez he has received about 600 Email and FAX messages in less than a week. The League's David Sumner calls that response extraordinary.

"What the little LEO folks have in mind is not necessarily our losing access to the band, but it, they have yet to demonstrate our continued use, in the way that we use the bands, would be consistent with their proposed use." K1ZZ

The Working Group's Warren Richards is asking hams for patience:

"I could understand why people are upset if they sense they are going to be losing spectrum, but that is not the case. We ask them to give us time. That, these things that they are concerned about, causing interference to their service we'll bear that out in our studies and it, if we can demonstrate that we can share spectrum with them without having an impact on your service, then I think we should be able to go ahead and do that. But right now, I don't know what the outcome of our studies are gonna be." Richards

Sumner sez this is not a time for hams to panic, but rather, to send thoughtful, civil messages to the Working Group. And, he sez, the ARRL is ready to do whatever it takes to keep amateur radio's two most heavily used bands strictly for hams. The facts, he sez, quote, "are on our side."

(*****
QUESTION POOL COMMITTEE AGAIN FUNCTIONAL

A seven month old problem that had threatened to disrupt the Amateur Radio volunteer examiner program has been resolved.
According to the American Radio Relay League, back in September 1995, a newly formed corporation called the NCVEC Inc, attempted to exert control over the Question Pool Committee, a charged vehemently denied by the NCVEC. The Question Pool Committee had been formed some years earlier by the organizations that have entered into agreements with the FCC to serve as Volunteer Examiner Coordinators.
The League balked at the establishment of the new group and told the NCVEC that it would not join. ARRL Volunteer Examiner Department Manager Bart Jahnke, KB9NM, was then dismissed from the committee. Efforts by the ARRL to gain his reinstatement were not successful until early April. That's when the FCC ordered the NCVEC to put the ARRL back on the QPC. Where there have been some reports of strained relations between the League and the NCVEC, this does not seem to be impacting on the work of the Question Pool Committee. Reports are that its members have been working in to resolve issues concerning decisions taken by the QPC in the seven month period during which it was operating without ARRL participation. Those issues have now been resolved to the satisfaction of all participants.

(*****
FCC LICENSE FIGURES

According to FCC figures, the numbers of new hams and of hams who have changed their class of license is up compared to the last half of 1995. New hams for the months of January, March and April have each totaled more than 3000, and upgrades have topped 1200.
In February, new hams numbered 2109, and there were 980 upgrades.
During the last half of 1995, which included the Federal government furlough the last half of December, the number of new hams averaged 2137 per month, while upgrades averaged 811 per month.

(*****
NEW CALL SIGN BLOCKS ISSUED FOR PUERTO RICO

New calls signs are being issued for Puerto Rico. On Monday, May 7th, the FCC began issuing call signs in Puerto Rico from one of the new NP3 blocks. For some time now, hams have been waiting for the FCC to begin issuing new call sign prefixes blocks for areas in the Caribbean, Alaska and Hawaii that are running low on, or are already are out of available call signs for higher class licensees.

(*****
FCC ISLE OFFICE CLOSES

The Honolulu office of the Federal Communications Commission has closed due to reorganization. Calls and correspondence are being referred to the:

FCC - San Francisco office
3777 Depot Road, Room 420
Hayward, California
94545

(*****
FREEMEN ON 40

The Freemen are still using ham radio from their Montana compound. KC7PAW says via packet that he was checking out 40 meters and came across one of the Freemen broadcasting at 7.175 MHz. Jim says that he taped several different people ranting and raving about the Government.

(*****
20 METER INTRUDER

G0VUH says to be on the lookout for an intruder into the 20 meter band. Andy says to be on the lookout for a commercial music station of Spanish origin on 14.290. The station was first monitored at 08:00 UTC on April 26th.

(*****
JAS-2 LAUNCH SET

JJ1WTK reports that the next Japanese ham satellite, JAS-2 is now scheduled to be launched in August. It was granted a preliminary license in March, with the call sign 8J1JCS.

(*****
TECHSAT B LAUNCH SET

The Israelis have announced that July 28, 1997 is the date for the launch of the Techsat-B ham radio satellite. According to 4X1AS, the bird will carry the same payload as the ill fated Techsat-A that was destroyed in a launch mishap last year.

(*****
LUCID TO DAUGHTER QSO

NASA astronaut Shannon Lucid has been using R0MIR with permission of the Mir commander to talk to her daughter Shandara Richeson, KC5UAR, and son-in-law Jeff Richeson, KC5UAQ. Both recently received their ham radio licenses and Shandara actually talked to her mom while mobile in Houston, much to her mother's surprise.

(*****
NEW UK LF BAND

From overseas, the United Kingdom's Radiocommunications Agency has announced the opening of a new very low frequency band for British radio amateurs. The allocation is in the Low Frequency part of the spectrum and runs from 71.6 to 74.4 kilohertz. This new '73 kHz' band is available to

any holder of the British Class A Amateur Radio License who wants to investigate LF propagation, including transmission to underground caves. Power limit is a tiny one watt ERP using any mode from the home station location only. No mobile or maritime mobile operation is permitted, and use of a Temporary Location requires seven days notice to the District office of the Radio Investigation Service.

(*****
PACKET SLIM

F5SLQ says from France that packet operators should be aware that AP1BOX is not a Pakistani ham. Rather he is a CB operator in the Netherlands who has gained access to the ham radio packet airwaves. Laurent says that the best way to stop him is for SySops to simply refuse to forward any bulletins or mail with the call sign AP1BOX.

(*****
6 METER CONTEST

From the contest calender, word that N9PBA will be operating mobile in grid square EN-67 during the 50 MHz Smirk contest this June 15th and 16th. He will be in the upper peninsula of Michigan for the entire contest.

(*****
DX

In DX, it looks as if 6 meters may turn out to be the band of choice in 1996. JX9DFA reports via the VHF Reflector that he recently took part in a good opening into Western-Europe. Running only 10 watts from his FT767 into a 5 element beam, he was heard working stacks of Gs and GMs on SSB and CW on 50.110. He also heard and worked in ON, OZed and PA.
And WA1OUB reports that his first transatlantic 50 MHz E skip QSO was with EH8PX who went into the log at 21:19 UTC on May the 20th. Signals peaked over S9 both ways on SSB.

(*****
YOUNG HAM of the YEAR REMINDER

A reminder that the nominating period for 1996 "Young Ham of the Year Award" closes on June 30th. That's only three weeks away.
This years winner will receive an expense paid trip to the Huntsville Hamfest the weekend of August 17 and 18 courtesy of Yaesu USA Corporation. The winner will also get to spend a week in Spacecamp Huntsville as a guest of CQ Magazine.
All nominations must be submitted before June 30, 1996 on an official application. Application forms are available by sending a self addressed stamped envelope mailed to the:

Young Ham of the Year Award
c/o Newsline
28197 Robin Avenue
Saugus, California
91350

These nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and from the general interest ham radio files area on GEnie and America Online.

(*****
TOO MUCH E-MAIL

And finally the story of two little girls who decided to use the Internet as a school Science Fair project. The two fifth graders are known only as Stevie and Amanda and they attend the Phillipston Massachusetts Memorial School.
To find out just how vast the Internet is, the girls sent two e-mail letters locally to kick off their project. One letter to an uncle and the other to a teacher back on April 15. Within five days they received 50,000 replies, prompting a parent to change their e-mail address and call that portion of the project closed.
Since then the school has received reports from around the world ranging from praise to utter frustration -- as you can imagine -- culminating with a report from Australia describing an "overloading" of one Internet providers system.
So how did Stevie and Amanda do on the Science Fair? Judging took place Tuesday, May 14th but the two girls received only an Honorable Mention. The winning entry was a young student who disassembled a PC, labeled all the parts and explained the function of each. He may know how a computer functions, but its Stevie and Amanda who have made thousands of new friends, worldwide. You figure out who the real winners are.

========== response GM0CSZ / KN6WH

Wish to add that in Britain components at Radio Shack are relatively
expensive , indeed it's just convenience for the odd urgently
required component or electronic gadget. In Britain components can
be best purchased via same day dispatch mail order.

>>are buying the RS ham equipment.

This is irresponsible, unwarranted, and malicious.

What is -your- experience with Radio Shack equipment that you can pass
on to the group?

I have had, for example, a HTX-202 set up 24 hours/day on packet for
almost two years with no problems whatsoever. Knowing the reliability of
the current HTX-202s, I opted not to purchase the extended warranty.

>identification so don't be a lid and say "for ID". Simple isn't it.

Heck, the rules say identify every ten minutes and at the completion
of a contact. I don't blurt my call out more often than that, and,
if the station I'm in contact with knows who I am without hearing my
call, I may wait until after 10 minutes are up to say my call the
first time.

As for the "lid" thing, yeah, "for ID" is pretty silly, but so is saying
"my QTH is blah" or "I'll be QRT for a minute" on phone. Communicate
clearly, plainly and save the Q signals for CW.

3201. LINKS TO ALL MEMBERS OF CONGRESS & WRC-97 & ARRL BAND THREAT PAGE

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-11 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-1006962224140001@host16.cyberg8t.com>
Source record: 223303

I have generated links at (http://www.sarrio.com) to all members of Congress that have e-mail addresses, and also to the WRC-97 mailbox, and the significant ARRL page that deals with the band take over issue.

I know there is a great deal of controversy concerning the best approach to take in fighting the LEO attempted take over of 2m and 440MHz. I am not saying that e-mailing to your Congressional Rep. or US Senator is the going to be the most effective approach. I do not know and can only guess at what method will work most effectively. I do believe that to DO NOTHING will definitly lead to significant freq. losses in the long run.

I there offer all the above links for those who choose to use them. I would suggest however,that if you e-mail Congress, that you limit your e-mails to only your own district representative or state senator. Include your name and address, this will inform your representative that you are one of his/her constituent and he/she will be far more likely to seriously consider your letter. Also try to be civil and informative in your message, remember we need their support.

I have also added some letter writting matterial for those who find it difficult to put you ideas down into words. Feel free to use what you want, it's there for your use in the letter writing campaign.

>First, this conversation does not belong in an amateur
>radio newsgroup. Since, however, you have repeated your
>lies here yet again, deserve to be told publically that
>you ARE lying.

As you will discover if you persist in this debate, saying it
and proving it are two very different things.

>If this is the stupid taxation is theft argument, then
>every democratic government in the world that imposes taxes,
>including the USA, must have a fascist government.

This seems to be a reiteration of what I've been saying.
Unless you agree with me, you should consider rephrasing
your statement.

>> As to the new parties, they are related to the old by
>> their continued inability to divest themselves of the
>> aforementioned characteristic.

>Socialist goverments use exactly the same laws as every
>other form of government to make people pay taxes, etc.

Are you saying that because many governments do this, it
must be morally correct?

>> Ultimately, all socialists are fascist and all fascists are
>> socialist. The distinction between the two is solely a
>> matter of perception.

>This is just plain wrong. I don't know whether from
>ignorance or design, but socialism is NOT fascism.
>It's not a matter of perception, it's a matter of fact.
>Socialism, if anything, is the opposite of fascism.

Nyet, Robert.

Socialism and fascism both subjugate individual rights to
the state. They both replace those rights with limited
privelages. Both use force to subdue citizens who attempt
to exercise their rights in contradiction to the state's
claim that they don't exist. Both contend that the whole
is more important than the individual. Both operate on the
premise that the end justifies the means. Both steal from

those who own, and from those who earn.

I'm sure you can tell me which of these you disagree with?

>Equating socialists with nazis is a lie worthy of Joseph
>Goebbels himself.

You keep talking about lies, but you haven't presented
any logical basis for that claim.

>The Nazis are not, were not socialists, they were fascists
>who spent a good part of the thirties and forties murdering
>socialists whereever they could - like Spain, for example.

Socialists have no morals. Given the power, they'll murder
anyone in the name of the state, including other socialists.
Of course, some socialists only have the power to lie, cheat
and steal.

>Calling themselves National Socialists didn't make them
>socialists any more than Communist East Germany was Democratic
>because they called themselves the German Democratic Republic.

That's a good point. You realize that East Germany and the
Soviet Union were both socialist, right?

>There have been socialist goverments in Britain, Holland,
>Sweden, Australia, New Zealand, and many other countries.
>None of them have ever been accused of behaving like Nazis
>with the slightest credibility.

It is my considered opinion that overt acts of public mass
violence are not required in order to accurately describe a
government as fascist.

>As the son of a father who fought real Nazis while in the
>Dutch underground, and a mother whose family concealed a
>Jewish family in her attic in Utrecht for 2 years while the
>Nazis and their allies hunted for them - I and my family
>know what Nazis are, and the difference between them and
>socialists.

My family members also fought the Nazis, although their
acts don't compare with the courage of your parents. You
can believe me when I say that I have the utmost respect
and admiration for what your parents did.

Let me ask you a few questions, Robert.

1. At what point in the denial of individual rights by
government do you believe that socialism changes to
fascism?

2. Do you believe that violence is required to fulfill
the definition of fascism, and if so, how much?

3. Do you believe that democracy, in and of itself, prevents
fascism?

>You are either woefully ill-informed or a terrible liar.

Actually, I AM a terrible liar. I've never been any good at
it at all.

73,
Jack WB3U

Hi
I wonder if anyone has used the Icom 706 multi-mode 80-meter to 2-meter transcever without sight successfully? I know it should be possible with a speech synth through the computer interface, but I'd also like to know whether the rig can be used on its own (for mobile work) without help. My concern is the menus, as the frequency, mode and signal strength are given by the (optional) voice synthesiser.
Any comments or help on this or relevant software welcomed.

>I hear a beep on the handie and can take the call. It is fun to work
>Australia and Japan with a two meter handie while walking along the
>Caribbean water front.

Only one small problem with that. A non-ham can get on I-phone and
call you over the radio. Now it would be just like using the autopatch
but you are initiating the call with the autopatch not the other way
around. If you could control it remotely then it would be alright.
Besides it is illegal to control on 2m, must be 220 and up for control
purposes on a simplex frequency. If it was a duplex freq then it would
be legal.

3211. another uhf band lost?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-11 00:00:00 UTC
From: Richard Choy <rixy@crosslink.net>
Message-ID: <31BD697E.563B@crosslink.net>
Source record: 223313

June 11, 1996
Well, it's happening again. The new "Family Radio Service" is on it's
way.
For those of you not familiar with it, the FCC is "giving" away another
part of the radio spectrum to another service. This set of frequencies do
not directly threaten the amateur radio spectrum but will soon destroy
the
commercial UHF spectrum. The frequencies are in the 460 to 470 band that
is
shared with GMRS, police, fire, and the business band.

The proposal and by the time you read this, the new rules will allow
anyone
to use portable handheld FM transceivers without a license and use it for
anything they wish. The power output is "limited" to 1/2 watt.

This service is to provide "short range" voice communications among
"small"
groups of persons.

This service was pushed into existence by Radio Shack, Motorola, and a
few
other electronics industry businesses.

The FCC "claims" that no tone squelch or phone patches will be
authorized.

My questions to the FCC and the industry are as follows:

1) Who will limit the amount of power that one can use? A 40 to 100 watt
"linear" can be bought for less than $60.00 on the amateur radio market.
How many days will it take before they (the users) will figure that out?
Who will regulate and enforce it? Will amateurs be prohibited from
purchasing them for ham operation because of the potential abuse? Try and
buy a 10 meter linear nowadays.

2) 1/2 watt at the top of a mountain can easily reach 20 miles. What kind
of interference to others on the band will be tolerated? Just think of
the
network of "mountain toppers" that will pop up.

3) How long will it take for those using this service to change the
crystals and QSY to the GMRS service? Or even into the public service
band
where the police, fire, and rescue services reside? Once they figure out
the
vast potential of frequencies and coverage, the whole band will be in

jeopardy.

4) What ever happened to the 40 channels in the 11 meter band? Wasn't that
supposed to be used for short range personal communications? That industry
boasts that the portable handheld 5 watt CB's will work up to 5 miles!
FCC Docket 95-102 says this new service will provide coverage only a few
city blocks.
Look what happened to that band when regulation and enforcement ceased.
Quite often I scan 28.100 to 28.400 and find a group of kilowatt mobiles
truckin' up the interstate. (If the FCC ever needed revenue, they could set
up a mass sting and virtually clean up the whole band and make it useful
again. HI.)

5) How long will it be before these bold fellas find a fully synthesized
100 watt mobile with PL and DPL, and go up and down the 450 to 470 mhz band
to see just how many police repeaters they can key up?

Please read Docket 95-102 or RM-8499 and tell me I have nothing to worry
about.

Source record: 223315

I personally think that CW is an integral part to being a ham operator.

I only have my 5 WPM but am working my way towards my 12 WPM. Here in Canada anyways you need your 12 WPM to have full access to HF bands.

I would like some feedback from people who think that CW is not necessary. Why is that? Why is CW not a good delimeter in protecting certain parts of HF to those who wish to exercise their expertise a certain way?

At the risk of being simplistic or offending, when an individual goes to a restaurant which will be shared by other patrons, he has a choice of going to a chip stand or a ritzy restaurant. Each place has its own delimeters (price, dress, location) that
they use to grant access.

Again, I'm not baiting anyone, I just want to know what is wrong with limiting access to certain parts of HF, as long as the criteria for granting access is fair.?

Make sure he is not using the 202 with a 12 volt power supply and the rubber duck(that includes 12 volt batteries) There is sometimes a problem with some signal bleeding back into the 202 when it is at full power @ 12v. It causes the PL to unlock. Also, make sure he doesn't leave the battery on when using external power, some older 202s fry when external power is used with the battery installed. Hope I helped.

In that case, I guess all those books the Apollo astronauts wrote years later about their experiences in the space program were all faked, too. Not to mention the book about the development of the Apollo hardware (I have most of these books). Also all those Saturn 5 launches that were witnessed by thousands of people at the Cape, and all those Moon rocks. Oh yah, and the Apollo 13 Service Module failure was deliberately faked, and Grissom, White and Chaffee are all still alive. It's all a conspriacy to cover up the giant face on the surface of Mars, you know.

There's probably people reading this group who worked radios for NASA back then (see... a link to rec.radio...) How about it? Was it faked?

Yeah, ironic isn't it. While we can make high sounding claims for
retention of 2m and 70cm by amateurs, the hard fact is that it is
the spectre of those bands becoming an unregulatable mass of pirates,
like 11m, without the moderating presence of legitimate amateurs that
is our real ace in the hole here.

Our peer pressure causes potential pirates to self-police to a much
greater degree than many realize. We have our problem children, but
we're still much better behaved than we might be because we insist
on others using their real names and standing up and being recognized
in the community for their actions (and hunting them down if they
won't). Without that, it would be bedlam.

Yeah, fix the static problem. A 100k resistor from the inner conductor of your leadin (assuming coax, otherwise from both conductors of a ladder line) to Earth will protect the diodes from static buildup. The impedance presented to RF by the 100k resistor will be high enough not to affect normal operation.

Hello All,

I just purchased my first HF receiver HR-1680 (need the speaker)and HM-102 meter(still need transmitter, amp,etc) I would like to set up a station with all Heathkit and or other assorted homebrew equipment/kits and would be interested in hearing from other Hams that have done the same. Specifically, I was wondering if Heathkit came out with a transmitter that would especially compliment the 1680. Also, I was wondering if I would be able to use one of the TENTEC 6mtr kits(20-6) with this rig.

Any tidbit(s) at all would be greatly appreciated.

73s,
Frank

>real or not.

I don't see that as a threat, more as a statement of pragmatic reality.
We already have a problem with pirates disrupting our pacsats. I can only
see that problem growing worse if a reallocation were to take place. I
recently talked with someone who is importing amateur radios to be used
as "poor man's" cellular phones in a third world country. That problem
is also only going to grow worse, especially if a lot of used 2m and 70cm
radios appeared on the surplus market thanks to amateurs being driven off
the bands.

>Personally, I would have thrown in a reminder that 2m and 70cm require
>antennas that are much larger than those used for most low-earth-orbit
>applications, meaning that the use of these bands for "little LEOs" would
>unnecessarily burden the user stations.

That's not necessarily a problem. LEO contacts using only rubber ducks
have been done by amateurs, and Orbcomm's system operates at 148-149.9 MHz
and 137-138 MHz using 3 watt data radios no bigger than typical amateur HTs,
and using stubby duck style antennas. For very low orbit satellites, the
line of sight loss is low, not much worse than for typical terrestrial
repeater operation. It isn't weak signal work by any stretch of the
imagination. If you're in a building, an outside antenna can help, but
it may not always be necessary.

2m and 70cm have several advantages for the little LEOs. First of course
is that they've been proven to work by amateurs, second is that 2m is
contiguous with one band already allocated to little LEOs, and third and
most important perhaps, doppler shift is much less of a problem the lower

in frequency the system is assigned. A low orbit system suffers rather extreme doppler, and that rapidly gets worse as frequency is increased. For a consumer service, requiring sophisticated doppler tracking would increase costs sharply.

OTOH, information bandwidth is sharply limited as frequencies are decreased. The Orbcomm system has uplink and downlink speeds of only 2400 baud for example. That's not really sufficient as we've learned from amateur experience. If they manage to get all of 2m from us, that only gives them 200 2400 baud channels, or a total of 480 kb, or 1/3rd of a T1. That's pretty poor for a commercial service hoping to attract millions of consumer level data customers.

Of course that's 480 kb per satellite footprint, the frequencies can be reused in a quasi-cellular manner. But since they are TDMA, they can't load the channels very heavily, probably no better than what pure Aloha will allow, so they may only get 20% of theoretical channel capacity as usable capacity. And they won't be able to use adjacent channels on any given satellite or they'll have horrible problems in dense terrestrial markets due to contending users co-channeling each other, and will suffer extreme levels of collisions where satellite footprints overlap. They'll have to interleave channels among the satellites. That means they'll only have about 48 kb of usable throughput for the entire 2m band in the footprint of any given satellite. That's pathetic. (Realize that this 48 kb has to be divided among *all* the active users in the footprint at any given time, and you see that each individual user will have very little throughput, or that the number of users will have to be very small, neither a very attractive commercial prospect.)

(Of course they could go to SS, which would multiply the number of users they could support considerably, but they'd be chasing a difficult clock recovery problem on the ground and on the satellites due to the doppler. That's solvable, as witness the GPS constellation, but that's a considerably simpler problem than a two-way service would face.)

If they were to choose to go the Teledesic route, with Ka spot beams from a higher orbit, higher power, satellite network, they would have many megabaud of capacity per spot beam. And because of the higher orbit, a lesser doppler problem as well. But they'd need larger (directional) antennas for the users, about 20cm diameter, and a *clear* view of the satellite arc. Thus they couldn't very well use the system indoors or in vehicles driving in urban clutter. That would sharply limit applications to fixed locations, and those are already (or soon will be) served by terrestrial cable or fiber.

I'm dubious of the long term economic viability of such systems. Direct TV has made a go of TV distribution via digital satellite, but that's a one-way broadcast from GEO. Point to point switched service from LEO is a whole other can of worms. I expect terrestrial solutions will remain (or become) more cost effective alternatives, IE either wired systems or things like Ricochet. Satellites may retain

an edge in the boonies, but there just aren't enough customers in the boonies to make it pay on a large scale.

(Note that broadcasters are pulling back from satellites and switching to fiber where available. Fiber is already a better deal for point to point distribution than satellites in many cases. As a result, there is excess transponder capacity in orbit now, going begging for business. With the coming of video on demand service to the consumer, this trend will accelerate.)

Iridium has finally figured they're going to have to charge $2.50 a minute to make their system pay. How many consumer grade customers can they attract at those rates? Not very many I'd guess. They're going to have to depend on the high value customer in the boonies, and I don't think there are enough of them to support more than a limited satellite investment (and hence a limited need for frequencies).

The little LEOs hope to get costs down to the consumer range by using simpler equipment in very low orbit, but that limits them to low data rate applications in the VHF spectrum. Satellite paging and OTR truck tracking are areas where they may be able to compete with terrestrial networks, but I don't see them supplying a mass consumer market for two-way data. I think systems like Ricochet hold much more promise for filling that niche for the mobile user.

Given the above, I don't think the little LEOs can justify asking for more valuable VHF/UHF spectrum at this time. The question remains, however, can amateurs justify *their* occupation of this same high value spectrum? Frankly, that's a hard case to make too. If amateurs didn't have prior "squatter's rights" to this spectrum, I'm not sure that we could make a convincing case for getting it now. But we *do* have squatter's rights, with over 1.5 million of us worldwide already using this spectrum, and it would be a policing nightmare to displace all of us. It wouldn't take many pirates to wreck any commercial viability the little LEOs might have. Given the total inability of administrations to police 11m, and lacking the current self-policing of amateurs, I don't see how this problem can be solved in a timeframe that would be acceptable to commercial little LEO operators.

>more radio in the satellite (heavier), but also more flexibility with
>harmonics and interference?

More likely a greater nightmare. The LEO sat would have to switch
absolutely reliably several times each orbit for this to work. If
the system suffered a SEU, it could generate interference to other
services until it could be shutdown and reset (*if* it could be
shutdown and reset, look at Oscar 10, it does what it wants and
we can't do a thing about it). Great pains are taken to make sure
satellites *can't* cause such interference currently by not allowing
them to be frequency agile into bands where other services operate.

Every effort is made to make satellites reliable, but that costs
big bucks, and every additional system on the satellite multiplies
the reliability problem. No system is perfect, so the satellites
are designed to fail safe, but that's not always possible either,
so they are designed to at least fail with the least harm to other
spectrum users. If a satellite doesn't have the capability to do
something potentially harmful, then that's one less failure mode to
worry about.

While such a frequency agile satellite is certainly possible (though
the antenna situation might be a problem on a microsat sized platform),
I don't see any responsible administration licensing such a system in
the near future.

Remove the front panel of the radio - this is done by removing the
two allen head screws from the front panel and then pulling the
front panel off. Look on the PCB behind the front panel for a
single SMD diode near the 'W1' silkscreened on the PCB; remove this
diode.

Replace the front panel.

Note that this mod can be made without removing the actual radio from
the mounting bracket.

Indeed the amateur radio community should oppose the LEOs proposal
with technical arguments like the points Ed made (see above)
We should also get to know in which way the LEOs would utilise the
spectrum they 'want'. For example if they would apply spread
spectrum technology ,it could well be that current operation by radio
amateurs would not be affected eg both could possibly happily co-exist.
Investigating this possibility in itself is more than a worthwhile activity
It would show that Radio Amateurs (many of them professionals in a
related field) are capable of making a balanced judgement, on the
basis of knowledge. This IMO is the best way to consolidate the
Amateur Radio position and where necessary win the argument.

I built this kit back in late 1990 when the QST article first appeared.
Been using it ever since. Excellent keyer. Newer model has upgrades
that mine doesn't. Currently marketed as the K-1 Logikey. Selected by
Kenwood to be standard equipment on the superb TS-870S transceiver
(which I also have, and this is one reason why I bought this rig).

> there was a widely held shared view that the the Jews ought to be
> eliminated in some way from German society. When Hitler, ultimately,
> chose mass extermination as the only "final solution" he was thus easily
> able to enlist vast numbers of Germans to carry it out.It is certainly true, that lots of Germans actively (or passively) supported
Hitler and its regime, but the hatred against Jews and other minorities
(e.g. Gypsies) was not a German problem, but a problem found in all christian
countries. I think, the reasons why the whole thing went out of control,
is too complex to be discussed here (besides the fact, that it is off topic
here), so lets keep it out here.

> Of course those Germans NOT alive during World War II cannot be held
> responsible. But I refuse to respond to German "CQs" because I feel the

> the only could find another Hitler. This was shown during the recent
> Gulf war when Germany was the one selling weapons and materials to make
> poison gas to Iraq.It was not Germany selling these weapons to Iraq, but German companies, which
illegally did this. German justice prosecuted (and still does) these companies.
To make responsible *the Germans* (and to say, they are just waiting for somebody
to do such illegal business) is an insult to all (and this is the huge majority)
Germans supporting a democratic System Germany is since the end of WWII.
It would be the same, if somebody just refuses to make a QSO with an American
station, because 'all Americans are racists discriminating black people'. Just
think about it, how long it lasted, until black people got the same rights as white
people in the USA. On which side did *You* stand in these times?
Although there are still ways to many of these brain damaged 'Arians' crying around,
there are not more racists in Germany (and Switzerland, and France, etc.),
than in USA. Just remember, where all this Nazi-crap showing up in Europe comes
from: It mostly comes from fuckers like Garry Lauck, which proclaim their crap as
'free speech'. As long as the USA (and Canada) is not willed to stop this abuse
of the certainly important right of free speech, I would suggest You to choose
Your words more carefully next time.

> Surely there are some caring decent German people that would resist
> another Hitler and another holocaust but there are too many Germans just

> waiting to finish what Hitler started.You are doing just what the nazis started 63 years ago: You are fiddling around with
history telling lies and changing facts to bend reality to what You want it to be.
Have You ever been in Germany and have You really found all but a few Germans
to be Nazis?
Or do You just tell us about Your fantasy, how You *think* the Germans are
(or have to be?).

> Is there anyone that agrees AND is willing to say so?No, I do NOT agree, and I do NOT accept, that somebody is changing history, just
because he is too stupid to understand it.

> I notice that hams rarely will stand up for or stand against anything.As You may have noticed, I stand up for a democratic system practised in Germany
(and Switzerland, where I live).
And I stand up for one of the most important things, ham-radio stands for:
Bringing people together, whichever color they have and in whichever country
they live.

just think about it.

A friend of mine is planning an around-the-world trip in a light airplane. He intends to install an HF transceiver in his airplane primarily for use in the ham bands but also as an emergency backup for long range communication with air traffic control. The aircraft is a Cessna 172RG which has a 28 volt electrical system.

The requirements for this radio are that it be small, light, easy to use, work well in an aircraft installation, and above all else be tough and reliable -- he'll be a long way from the nearest service center.

My friend is seeking user reports on the Icom 706, with respect to the above factors. In addition, comparisons to similar Kenwood or Yaesu units would be helpful. If you have such information, we would appreciate it if you would send it to me via e-mail at the address below.

Thanks for your consideration.

> I use AA NiMH batteries in a Garmin GPS-40 device.

I've never heard that story, but it may be true. But why would you
care whether the cells "don't like" your application? Even if the
1200mAh is somewhat de-rated, I'm sure that it will surpass the
competition, which is NiCd's with only bout 600 to 850 mAh capacity
in the AA size.

But anyway, and speaking of GPS units, I only use Alkalines in my
Trimble Ensign and they have 2500 to 2700 mAh capacity each depending
on the brand. BTW, if you go out in very cold weather, you might
also consider the Lithium Iron Disulphide AA's which are very similar
to Alkalines for terminal voltage and capacity, but keep working well
when used far below room temperature, which the Alkalines do not.

I'll take a stab at this one, too.

After many years in broadcast and microwave site engineering, the best answer I can give you is "yes, no, and maybe".

"Most" of the professional sites employ some form of lightning protection. There has been considerable time and money spent on determining the "best" form of lightning protection.

While gas tubes and arc gaps are certainly in use at many places, they do not work at all without a good earth ground.

While I don't have much experience in high-rise buildings, the concepts are about the same, just further up in the air.

The sites that I designed used a "ground ring" type of system. The building is surrounded by a large gauge (2 to 00) solid copper wire ring (buried about a foot). At least 4 to 8 copper clad ground rods are driven, and "Cad-Welded" to the wire. The ring also extends to the tower base, again surrounded with wire and ground rods. The ring around the tower base has 6 inch wide copper strapping brazed to it, an crosses in a X pattern, under the base of the tower. Then, another large gauge wire is "Cad-welded" and brought up and bonded to the tower as well.

In poor soil, or a rocky area, chemical grounding is sometimes necessary. These rods are more expensive, and need to be replaced more often.

Equipment inside the shack has a 6 inch copper strap, brazed to the ring, and attached at the base of the equpiment (transmitter). Often, these are glued

to the floor, or placed in a cable "trench" in the concrete. A strap should be used on each transmitter or rack.

Coax or waveguides are grounded to the system at the exit of the building, at the base of the tower, at the base of the antenna, and depending on the height of the tower, at least one or two places along the run up the tower.

Naturally, the goal is to have the lowest impedance to the pulse through the ground system, not the equipment. Interestingly, the resistance isn't the real issue, it's the impedance. Lightning is a short lived event, and can be examined as a pulse.

With this (perhaps) overkill system, a tower can take a direct hit, and not damage the equipment.

I still would not want to be touching any equipment inside the building though. Maybe I just don't trust in much.

This type of grounding has served me well for the past 15 years, and I'm sure that it has saved alot of money in fried gear. I know of at least 5 times one of my systems has taken a direct hit with no damage.

The latest (3 to 5 years now?) in lightning protection, is the "Static-Cat". A trademarked, patented product. I have used some of these on sites, and they are quite amazing.

They look somewhat like a chimney cleaning brush, made of stainless steel, with many hundreds of VERY sharp points. This unit attaches at the top of the grounded tower, (same type of grounding is required).

Theory is, that as the storm approaches the tower, the Static-Cat starts to discharge the potential difference, prior to the direct hit. (bolt lightning starts at the ground, not the cloud)

If the charge is considerable, and it is dark enough, you can see blue ionization "fire" surrounding the Static-Cat. With these, it is said that your chances of a direct hit fall considerably. I think this is true.

Well, this got a bit long winded, hope it helped a bit, and was "On topic".

Please come back to earth..... I don't know if you've ever been to
Germany but I think there are much more NAZI's in the USA and they are
allowed to carry heavy arms.Nazi propaganda is forbidden in most of
europe and in Germany for sure.

To say "the Holocaust didn't happen" makes you go to jail in Germany
so they know what happend, but I wonder if you do.

I don't like socialists because those governments spend too much money
but to say all socialists are fasists makes really no sense at all.

Remember you live in a FREE country unfortunately with a president
that can act as dictator..... I think Germany and Dutch governments
are much more democratic than the US will ever have.

What is a country that prevents CB users to speak with other
countries?

Enno

I believe the sentiment of most falls in line with the old expression
"It's the way it's always been - I don't wanna change!"

Eventually, although regrettably, I also feel that hams will feel the
pinch of technology sueeezing them ever higher in search of usable
spectrum. However, I also feel that existing spectrum resources can
be more efficiently utilized by projects such as LEO.

>FYI: The socialist part of Germany was discontinued a few years ago.

I think you and WB3U are using equivocal terms in English. Unlike the German usage, in English, "Socialist" can and usually does refer to social democracy. This probably comes from the usage of the Fabian (social-democratic) society in England. When one is referring to a Marxist movement, one usually simply calls it "communist" or tacks on the appellation "Marxist" as in "Marxist Socialism." Thus, the demise of the DDR and the SED are irrelevant to the post above.

On the other hand, while the SPD (a "Socialist" party in English) certainly has a lot of power and is responsible for many German policies (the better ones IMHO), it is only the number two party at the moment and, contrary to what WB3U said does not "govern" Germany.

Furthermore, WB3U's idea of equating National Socialism with either Social democracy or Marxist Socialism is utterly laughable. While the original NSDAP (National Socialist German Worker's Party or Nazis) as founded by Anton Drexler had some elements of Socialism at the beginning and the Sturmabteilungen (SA or "Stormtroopers) were recruited from the working class with promises of a more equitable future, the fact remains that the NSDAP was the avowed enemy of social-democracy and Marxist socialism alike.

After the SA had served its purpose, it was disbanded and its leaders executed in the "Night of the Long Knives" on June 30th, 1934. The unions, bulwarks of socialism demanded that the NSDAP honor workers by making May, 1 (workers' day) a national holiday. Hitler agreed they forcibly disbanded the Unions the next day. Other seemingly socialist policies supported by the NSDAP such as the "Strength Through Joy" program, for which the Volkswagen was created, were only used in propaganda and never actually put into practice. Finally, National Socialism violates the cardinal principle of both democratic and Marxist Socialism, "the nationalization of the means of production." Under the NSDAP, the factories remained in private hands and made a profit. Thus, ironically, Marxists see Nazism as an extreme form of CAPITALISM! WB3U's post could have easily been posted by a Marxist as long as he did a simple "search and replace" exchanging "Capitalist" for "Socialist!"

>:>> For the present government to merely understand and admit that the genocide
>:>> committed by the Nazis was wrong will be of little comfort to
>:>> any future victims.

>:>I agree! But what would you have them do? Mass suicide?

>May be banning is from the civilized world and in particular the Internet
>would suffice for a start.

I found it highly amusing actually.

3255. Nickel-Metal Hydride Batteries

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-12 00:00:00 UTC
From: frank.dinger@zetnet.co.uk
Message-ID: <4pncab$6t8@roch.zetnet.co.uk>
Source record: 223102

Hello all, Some time ago I responded to a thread in a GPS newsgroup stating that my Garmin 40 device is powered by 4 type AA NiMH batteries, since they have more than twice the capacity of type AA NiCad batteries.
One response I received commented that NiMH batteries only have the high capacity if used with a stable load . This type of battery would not be all that suitable for use with a say 5 Watts HT because of the large change in load when switching from rx to tx ,etc.
However in QST -June 96 - page 140 ,NiMH battery packs are advertised for a number of well known HTs.
This contradicts the above.
Does anybody reading this newsgroup has any experience with NiMH batteries used with HTs or QRP transceivers ?
Any relevant response will be much appreciated.

I believe you need to make contact with ten hams (on ten meters) and get
their 10/10 numbers. Then you send your list to the 10/10 person in your
area (with a nominal fee making you a member of the 10/10 club) and they
will send you a number...sorry, I don't have the info re where you send it.

In article <31B9A841.5FF1@prolog.net>, John Dobak <dobak@prolog.net> says:
>
>I happen to like 73 mag, as a matter of fact 73 is the first mag I open and read
>I enjoy the talks about cold fusion, fringe sciences and even about his rag-time
>music.

i viewed an ARRL membership as a subscription to QST when the mag was
not readily available. after it went on sale on supermarket newsstands
i dropped my membership, as every issue of QST wasn't that interesting.
for a period of 2 years i'd 'preview' the mags, and only buy those i
found of interest. in that period, i bought 2 CQs, 0 QSTs, and every 73.

Uncle Wayne may beat strange drums, but he is a breath of fresh air in
the world of ham radio. i'll let his comments on the boredom of the bands
say it all.

Richard Choy (rixy@crosslink.net) wrote:
: June 11, 1996
: Well, it's happening again. The new "Family Radio Service" is on it's
: way.
: For those of you not familiar with it, the FCC is "giving" away another
: part of the radio spectrum to another service. This set of frequencies do
: not directly threaten the amateur radio spectrum but will soon destroy
: the
: commercial UHF spectrum. The frequencies are in the 460 to 470 band that
: is
: shared with GMRS, police, fire, and the business band.

: The proposal and by the time you read this, the new rules will allow
: anyone
: to use portable handheld FM transceivers without a license and use it for
: anything they wish. The power output is "limited" to 1/2 watt.

: This service is to provide "short range" voice communications among
: "small"
: groups of persons.

: This service was pushed into existence by Radio Shack, Motorola, and a
: few
: other electronics industry businesses.

: The FCC "claims" that no tone squelch or phone patches will be
: authorized.

: My questions to the FCC and the industry are as follows:

: 1) Who will limit the amount of power that one can use? A 40 to 100 watt
: "linear" can be bought for less than $60.00 on the amateur radio market.
: How many days will it take before they (the users) will figure that out?
: Who will regulate and enforce it? Will amateurs be prohibited from
: purchasing them for ham operation because of the potential abuse? Try and
: buy a 10 meter linear nowadays.

: 2) 1/2 watt at the top of a mountain can easily reach 20 miles. What kind
: of interference to others on the band will be tolerated? Just think of
: the
: network of "mountain toppers" that will pop up.

: 3) How long will it take for those using this service to change the
: crystals and QSY to the GMRS service? Or even into the public service
: band
: where the police, fire, and rescue services reside? Once they figure out
: the

: vast potential of frequencies and coverage, the whole band will be in
: jeopardy.

: 4) What ever happened to the 40 channels in the 11 meter band? Wasn't
: that
: supposed to be used for short range personal communications? That
: industry
: boasts that the portable handheld 5 watt CB's will work up to 5 miles!
: FCC Docket 95-102 says this new service will provide coverage only a few
: city blocks.
: Look what happened to that band when regulation and enforcement ceased.
: Quite often I scan 28.100 to 28.400 and find a group of kilowatt mobiles
: truckin' up the interstate. (If the FCC ever needed revenue, they could
: set
: up a mass sting and virtually clean up the whole band and make it useful
: again. HI.)

: 5) How long will it be before these bold fellas find a fully synthesized
: 100 watt mobile with PL and DPL, and go up and down the 450 to 470 mhz
: band
: to see just how many police repeaters they can key up?

: Please read Docket 95-102 or RM-8499 and tell me I have nothing to worry
: about.

: Further reading:

Source record: 223112

Tuesday night, 9pm EST til almost 10 oclock.
I was sitting in my car in downtown Ithaca, NY and couldn't find any interesting music to listen to locally. I tuned to 96.5 to try for the Rochester, NY AOR station which can be heard well off and on. I DID get a rock station, full stereo, with a great signal. Thought it was WCMF, Rochester. Once the advertising came on I learned it was WHTQ in Orlando, FL!

I stayed with the station for almost an hour, then a religious broadcaster (regular occupant of the freq. in this area) from PA took over. Shortly thereafter, around 10 pm i heard another station wipe it out and the advertising was for Six Flags theme park in GA, so possibly a Georgia station, tho not as strong as WHTQ and only lasted about 5 minutes. Pretty excellent conditions; not bad for a car radio!

I called WHTQ and talked with the jock, Chris, and he was amazed, and had just received a call from Massachusetts. Wonder what other folks caught on VHF 73, Joel N1AEP

Hell, the no-code test is all you need to do all that above playing around (all legal if you stay inside the ham bands and stick to band plans). Any pirate with enough knowledge to do some serious hardware hacking should have no problem taking the no-code test and then be legal, and have a ready supply of other people to talk to on the air. Transmitting where noone can hear you is rather pointless. As pointed out, UHF is almost all line-of-sight, and there probably won't be enopugh other pirates in your coverage area to make things interesting.

As of June 1, the CIB has 257 employees, down from about 370 prior to closing 6 monitoring stations and 3 field offices. It isn't just amateurs who can't get the FCC to act, public safety and broadcast can't get it to act either. And that really isn't because the CIB staff doesn't want to act, they simply don't have the resources to do so. There's too much to monitor, and too few to do it. They have a continent to cover, with millions of emitters, and they only have 257 people (including secretaries and desk jockeys) to do it.

As I've noted here before, I've been called upon by the Atlanta office to help them track down interference to public safety communications in the recent past. (The FCC monitoring vans have spent most of their time parked in Maryland because the operators were RIFed a couple years ago. It is only rarely that someone can be broken loose from another task to take one out and hunt for interference.) Of course now the Atlanta office is shut down, and the people I worked with have either been transferred or laid off. The next time the police have interference, they'll have to call Kansas City and hope someone will eventually be able to come out and take a look at the problem.

The little LEOs are small potatoes compared to broadcasters. I don't think they'll have much better luck in getting the FCC to do anything about a random bunch of signals interfering with their satellites than broadcasters have had getting the FCC to deal with interference to their links. We have a chronic problem with our ENG backhaul links being interfered with that we've been unable to get the FCC to resolve, and we've already tracked down and identified the (stationary) source ourselves. It's a dirty air search radar putting spurs on our channel.

Complaints to the agency operating the dirty radar have fallen on
deaf ears. They've got their own budget and manpower problems.

Consider the more difficult problem of finding one out of millions
of transmitters that's keying up randomly, while perhaps being mobile
in motion as well, on a little LEO uplink frequency. That would be the
problem they'd face in finding one jammer among all the consumer TDMA
stations trying to access a little LEO. The FCC used to be good, but
they were never *that* good.

HELP!!!!
I got a kenwood tr-8400 and need to install a pl. deck.
what i need to know is where the dev pot is in the radio...
help!!!!!!!!!!!

any info would be great!!!!!
thanks de kc6wfs....

it's funny how burt stuff always comes back after a year. i remember the same stuff from around august
1995. what next?? his hated of Ruthie???

burt's topics are like perennial flowers..always the same thing year after year

let's get back to amateur radio

for the most part, the radios are supposed to be VERY hard to hack.
They are supposed to have the antennas PERMENANTLY connected and be
crystal controlled. The antennas are to be inefficiant and the radios
will have a maximum power of .5 watts. I don't see how these readios
will cause much interferiance to anyone.

UPS never received a nationwide 220 Mhz license (something they HAD to
have to be able to use the band the way they had planned to)....and I
heard stories of their subsidiary company, II Morrow (who was to make
their special 220 ACSSB gear) having BIG time problems with the radios
affecting the electronics in UPS trucks and never could get the bugs
worked out (AHHHH so sorry!)...

Poor closed minded fool. There are, of course, those who feel the
same way about the Japanise. My uncle, who spent a year in
a Japanise prison camp, feels the same way. But Burt doesn't
have that excuse. He should read his history books. Hitler didn't
start his "clensing" until he was so powerful that the German people
could do nothing about it. It started very subtly by first disarming the
people with restrictive gun-laws. Kind of like what the current
administration wants to do. He got their admiration when Germany
was in great economic troubles. He brought them out of their troubles
and, I know, right into a war. Most of the German people did not approve
of what he was doing but they were afraid of the SS.

Better put a few more tax dollars in that "rainy day fund" for lawyers, court costs, and fines. The "local council" has absolutely NO jurasdiction over CB radio. It is strictly a federal matter, and only the F.C.C. has any authority whatsoever in matters regarding CB operations.

Since operating a CB is a legal activity, how is it that the council has
the authority to enact a ban on CB antennas?

I hope your town has lots of extra tax dollars laying around to pay
lawyers, court costs, and penalties. My guess is that they're going to
be doing just that in the near future!

>Exactly what you said. I worked at the local Rat Shack for 4 months and finally HAD to quit. Our
manager was a 28 year old female (no pun intended) that had NO knowledge whatsoever of anything
electronic. She was constantly in the back office talking to her mother on the phone while everyone
else actually did the work. We actually only had three people including myself who had any computer
or electronics knowledge. Right after I quit, the my other friend quit also leaving just one person with
any sort of electronics experience.
And the markup is horrendous! HTX-212's that sell for 349.99 cost the store $194.00. Not a bad markup! Well, the one good thing I could say was that the assistant manager was bright. He
should be the manager as you could trust him when he told you something while the RED-HEADED
manager should have been on the sales floor. In JC Penneys or Sears. Well, enough of Rat Shack.
Probably the best game in town for one or two small items not readily available elsewhere. For all other
purchases, however, skip them and find a real store. That's it ..

I believe I saw a program that sized Telsa coils that would give you
inductance, resonant freq. etc. I found it doing a excite search on telsa
coils. It is freeware and it works really well. Sorry I don't have the web
address. Good luck.

Why not take an empirical approach, and make a simple LC tank circuit.
If one knows the capacitance providing the initial voltage across an
inductor, which has small real resistance or known resistance by other
means, then the sinusoidal frequency of the voltage or current may be
used to estimate the inductance.

Consider an initially charged capacitance (C) at t=0. Close a switch
such that the inductance becomes the only load to the capacitor. This
will produce a sinusoidal voltage/current variation in time. The
ringing frequency f is then related to the inductance and capacitance
by:

(2*pi*f)^2 = (L*C)^-1

We employ this technique to estimate the series inductance of vacuum
diodes used to generate electron beams.

Good luck in your experimenting.

Hey! At least that means that there will be a market for our gear
that we can no longer legally operate! Seek out your local freebanders'
black market!

(Please note that my comments above are purely sarcastic. I _do not_
support the LEOs or the freebanders. I am writing letters to all
concerned, including my congresspeople, about this very serious issue.
I am going to use snail-mail, since the powers-that-be seem to have found
a convenient way to avoid reading any e-mail.)

Well if you define the term "socialism" as "perverse thieve and extortionists," then the Nazi's were certainly "socialists." However, please realize that this is a highly idiosyncratic definition.

But it says there are still other charges pending, whatever they are.
It sounds like they are still going to prosecute even if they have to
manufacture something. After all, how will it look if they gov't
persecutes someone and they don't even have a trial? Mighty silly, I
think.

I'm proud to say that I've never needed to take advantage of the
extended warranty. I have, however, dropped enough HTs to know how
much it costs to repair one, so the price seemed fair to me.

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****

so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
June 16th, 1996
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Message-ID: <JzPubN8.unclesteve@delphi.com>
Source record: 223279

Here's a tip for figuring out when Field Day will fall each year. Since Fathers' Day is ALWAYS the 3rd Sunday in June, Field Day usually falls the following weekend (but not always!).

The ARRL did not move Field Day up a weekend. It is ALWAYS the fourth full weekend in June. Therefore, it can be as early as the 22-23 to as late as the 28-29. Hope this clears up the mystery!

>
>1) Who will limit the amount of power that one can use? A 40 to 100 watt
>"linear" can be bought for less than $60.00 on the amateur radio market.
>How many days will it take before they (the users) will figure that out?
>Who will regulate and enforce it? Will amateurs be prohibited from
>purchasing them for ham operation because of the potential abuse? Try and
>buy a 10 meter linear nowadays.

As you should know, a linear doesn't make much difference on UHF. A
half watt can reach out to the line of sight limit. FM capture
will allow the strongest station to dominate a local area, but that
could be a half watt station that's nearby rather than one running
a "linear" further away. Our friend the inverse square law really
works for us at UHF when it has FM capture as its assistant.

>2) 1/2 watt at the top of a mountain can easily reach 20 miles. What kind
>of interference to others on the band will be tolerated? Just think of
>the
>network of "mountain toppers" that will pop up.

Yep, they don't need power, just height. If they want to scale mountains,
they can work "Dx". Sounds similar to what amateurs do. Dxers are a
nuisance, but FM capture can let nearby stations override the Dxers,
unlike at HF where AM (including SSB) doesn't allow capture to work
and thus allows the Dxers to be a serious nuisance over a very wide
area.

>3) How long will it take for those using this service to change the
>crystals and QSY to the GMRS service? Or even into the public service
>band
>where the police, fire, and rescue services reside? Once they figure out
>the
>vast potential of frequencies and coverage, the whole band will be in
>jeopardy.

Like the amateurs who just *have* to modify their HTs for out of band
transmit? It seems the FCC is getting wise to this, and has put the
manufacturers on notice to start making their equipment difficult to
modify for out of band use. No doubt Type Acceptance for the new service
will have a similar requirement. This is the most serious concern

you've raised, but hard coded synthesizers can be used that would require redesign of the radio to move it to other services. (Nobody is going to build a 10 channel radio with 10 crystals anymore, it costs too much.)

>4) What ever happened to the 40 channels in the 11 meter band? Wasn't
>that
>supposed to be used for short range personal communications?

Yep, but the FCC stupidly tried to control that with regulations instead of natural law. Regulations can be broken, natural law cannot. UHF is where CB started, and where it should have stayed. This new service is just a return to what CB was meant to be, a short range communications service for the general public. And this time natural law will ensure it stays that way.

(Sure the ocasional duct will allow a bit of Dxing, and a really well equipped station could work forward scatter, but how many CBers are going to be able to put together that sort of UHF station? What's really needed at UHF is repeaters, and they aren't allowed here, and it will be easy to enforce that particular prohibition. Besides, if people want the advantage of repeaters, nothing stops them from going to the GMRS service instead of this one. It's not like either requires a test or anything.)

This new service isn't really significantly different from the 49 MHz license free band for kiddie HTs, except that the HTs will look a bit more grown up, like ham HTs. There hasn't been a rash of linear equipped 49 MHz equipment, and there's unlikely to be much in this new service either, and for the same reason. If you can't "shoot skip", there's little reason to have a big gun. Probably most of the people who will be attracted to this service are people who have been misusing land mobile itenerant channel HTs to accomplish similar ends by using them as defacto unlicensed radios, IE hunters, hikers, etc.

Wait for the facts. Maybe he was the lookout in a bank robbery and
the firearms and conspiracy to robbery charges still stand. Maybe
he was drunk and ran down a crowd of school kids. Is everyone
who is charged being persecuted or just amateur license holders? I
guess OJ needed a ham ticket to get more support around here.

Wow! It's been awhile since I heard 10 open this strong, across this wide of an area, and for this length of time. Turned the scanner on about 1:00pm local time and it stopped on THREE separate FM repeaters that I had programmed into it! Time to get to the radio! Band was open until 11:00pm here...from 28.3-28.5, there was a station (or two, or three, or more) every 5Khz. All 10-FM repeater frequencies were active with S-9+20 peaks on the 29.620 (Boston) and 29.660 (Godfrey, IL) Looks like the cycle has finally "bottomed out", and we've turned the corner!

Hello! My name is Aaron and my call sign is KB3BBG!! I'm in Eastern Pennsylvania and I can't wait till Field Day comes around! Field Day is Next Saturday!
I don't use newsgroups much, but if you are in Delaware County, PA, and you are doing Field Day with a club, please email me at tservo@op.net. I want to chat with anyone who is involved. Also I'd love to hear from other hams my age. I'm 14 years old.

Now - on to this problem we had in the town I live in. The CB problem in my town esclataed to new heights - so what the mayor and council did was that they talked to the FCC. They made a law in my town where there is a CB (and CB only) antenna restriction in the city. If you were a ham, you'd have to come to the municipal building and show them your license and you'd be put on a list of antenna restriction exemptions. Also - the local council now monitors the CB channels, especially the ones with the most activity. If they hear anybody causing trouble, etc.. they track the signal down. My town does a better job with handling CB problems than the FCC does!! :-)

Thanks for reading
and 73 de Aaron KB3BBG

This is caused by excess RF getting into the radio and unlocking the PLL. It is most often encountered when operating off of 13.8V using a rubber ducky. Solution: Use an off-unit antenna when operating from automotive voltage. (Using an aftermarket 8-cell battery pack can also generate the conditions necessary for the error.)

I've been in the same sort of business for ten years and I'll echo most of what Dean writes. One of our microwave sites took a direct hit shortly after we installed it. The hit blew up an awful lot of communications equipment and computers at the local 911 facility where our station resided. But our microwave gear and its comm equipment kept on trucking along. Rumor had it that later some-one climbed the tower and found several places where substantial chunks of metal were missing --probably vaporized. I'm glad I wasn't there at the time.

As for the Static-Cat product, I always wondered if the stuff was any good. You really can't know unless you have it installed at so many sites that you can use statistics to measure the direct hit probability with some authority.

I wonder if anyone else has any experience with the stuff...

I pretty much agree. Deep down, Wayne Green is a nice guy and it seems that he'll say outrageous things sometimes just to get people stirred up and talking. I don't know whether he's doing that with some of his recent bizarre (to me anyway) ravings, but he is apparently serious about cold fusion.

From what I hear, he has invested so much in trying to keep his cold fusion newsletter alive that it is dragging 73 down. I'm also hearing that he has falling way behind in making payments to authors and he's in such deep financial trouble that 73 may be in its last days. I don't know whether that's true or not, but let's hope it isn't.

Agree with him or not, I would really hate to see Wayne loose his shirt, especially after all these years of keeping the ARRL and others on their toes. Due to an oversight, I let my subscription expire a couple of months ago, but I think I'll dig out the renewal form and send it in. Thanks for the reminder.

Nothing is wrong with requiring CW to use HF as long as that doesn't include 2 m and 70 cm (assuming they don't get taken away). Pretty much everything else is irrelevant to someone not interested in ham as a hobby. You can protect the other bands all you want...hell, raise the requirement to 30 wpm.

>While I don't have much experience in high-rise buildings, the concepts are
>about the same, just further up in the air.

Not quite. A good Earth ground isn't needed, and is often simply impossible
to obtain anyway, for site protection when the site is on top of a tall
building or on a tall tower. What is important is a site common, a "ground
window" that keeps all the electrical paths at the site at a common potential
(whatever that may be at any particular moment). That site common is at
the top of the building, or the top of the tower, and has little relation
to Earth potentials far below.

>The sites that I designed used a "ground ring" type of system. The building
>is surrounded by a large gauge (2 to 00) solid copper wire ring (buried
>about a foot). At least 4 to 8 copper clad ground rods are driven, and

>base of the tower. Then, another large gauge wire is "Cad-welded" and
>brought up and bonded to the tower as well.
>
>In poor soil, or a rocky area, chemical grounding is sometimes necessary.
>These rods are more expensive, and need to be replaced more often.
>
>Equipment inside the shack has a 6 inch copper strap, brazed to the ring, and
>attached at the base of the equpiment (transmitter). Often, these are glued
>to the floor, or placed in a cable "trench" in the concrete. A strap should be
>used on each transmitter or rack.

And they all must run *separately* to a single site common point. Bussbar or
daisy chain connections must be avoided or you'll introduce ground loops.

>Coax or waveguides are grounded to the system at the exit of the
>building, at the base of the tower, at the base of the antenna, and depending
>on the height of the tower, at least one or two places along the run up the
>tower.
>
>Naturally, the goal is to have the lowest impedance to the pulse through the
>ground system, not the equipment. Interestingly, the resistance isn't the
>real issue, it's the impedance. Lightning is a short lived event, and can be
>examined as a pulse.
>
>With this (perhaps) overkill system, a tower can take a direct hit, and not
>damage the equipment.

This is all (at least mostly) good for ground mounted equipment, but it
is all (mostly) wasted effort if the equipment is far above the ground.
As you note, lightning is RF, and it is the RF impedance of the Earth
connection that matters if you try to shunt the lightning currents around
your equipment. For long runs, this is always inductive. At the di/dt of
a lightning strike, and the usual 18,000 ampere surge, huge potentials
will develop across the run. So shunting to Earth becomes ineffective
as a protection means for the equipment. That's why you want all the
equipment, and all the cables entering and exiting the site, to be tied
to a *single point* in the site, either directly or via suitable suppressors,
so that the potential at any piece of equipment (whatever it is) will be
equalized *across* the equipment. This must be done without daisy chains
of any sort. That single point can then be tied to Earth as best you can
so that side flashes through the building structure are avoided as much as
possible. In a tall metal framed building, it is generally impossible
to prevent all side flashes.

>I still would not want to be touching any equipment inside the building though.
>Maybe I just don't trust in much.

The equipment is going to float to the potential expressed across the inductance of the Earthing strap during a strike. If you have metal flooring in the site that's tied to site common (IE the ground window), it (and you) will float to the same potential, so you can touch the equipment during a strike. If you are at a significantly different potential, however, you could suffer a side flash even if you don't touch the equipment. I wouldn't stay at a site in a storm without using a bonding strap between me and the equipment, and making sure that no part of my body got near anything at a different potential. This is the same principle used by power company linemen when working on EHT lines.

>This type of grounding has served me well for the past 15 years, and I'm sure
>that it has saved alot of money in fried gear. I know of at least 5 times one
>of my systems has taken a direct hit with no damage.

The strike counter at one of my sites has tripped over past 999 so many times I'd have to consult the logs to figure out how many direct strikes it has taken. No equipment damage has resulted.

>The latest (3 to 5 years now?) in lightning protection, is the "Static-Cat". A

>discharge the potential difference, prior to the direct hit. (bolt lightning
>starts at the ground, not the cloud)
>
>If the charge is considerable, and it is dark enough, you can see blue
>ionization "fire" surrounding the Static-Cat. With these, it is said that
>your chances of a direct hit fall considerably. I think this is true.

Almost certainly not. According to a FAA test of this sort of thing, one of two things happens. Either the static discharger doesn't have the ability to discharge enough current to neutralize the cloud-ground potential, and is thus ineffective, or it breaks into streamer formation and actually becomes a leader for the strike currents to follow down to the site. The corona you observe is an indication of streamer formation.

A point discharger can't pass more than 25 uA without breaking into streamer formation, so you need enough points so each flows less current than that while handling a total of about 20 coulombs of charge during the time of charge buildup. With good thunderstorm winds, charge aloft moves at about 40 MPH, so you have about 3/10ths of a minute (18 seconds) to pass 20 coulombs via the discharger. That's a total current flow of 1.111 amperes, so you need about 44,400 brush points to handle that without breaking into streamer formation *if the electrical field around each point is equalized*. It won't be in the brushes, and the far tips will break into streamer formation. Thus these things tend to attract strikes rather than

prevent them.

Discharge wire (sort of like barbed wire but with many more, and smaller, points), formed into an umbrella shape (hemisphere), can do better because the electrical field will be more nearly equalized, but these too usually don't have enough points to handle the required current and are largely ineffective.

At tall sites, you can't expect to prevent strikes, all you can do is try to minimize the effects strikes will have on your installation.

Hello and thanks for reading this..

I have a RF Concepts RFC 2-317 amp that I need to get some work done on.. The number I have for RF Concepts in Gilroy, Ca is no longer valid and information is unable to locate a listing. I would appreciate it if anyone with an RF Concepts Amp would kindly look in their manual for the companies phone number and post it here for me..

Thanks,
Don AE4BR

First of all, I am really astonished to find such political topics
in these newsgroups!

Whatever you feel, ethically, politically or whatsoever:
don't blame people globally in that nasty way!

> The best selling book, "Hitler's Willing Executioners" by Daniel Jonah
> Goldhagen tells the story of how ordinary Germans (like hams) allowed
> the holocaust to take place.

Ordinary people like hams?
What does political practice, murder, slaughter have in common with
a hobby like amateur radio?
Do you have statistical material about the corelation of being engaged in
a certain hobby and the partizipation in crime?

> But I refuse to respond to German "CQs" because I feel the
> mindset of Germans even today would allow a repeat of the holocaust
> [mess stripped of]

Amateur radio is the only hobby to communicate freely, worldwide and personally!
Please bear in mind that most of the hams are thinking that way.
Political aspects, ethical discussions and moral disputes have nothing
in common with our hobby.
If you cannot handle that, you MUST refuse contacts with a lot of countries.
Would you think about chinese brutality when working Spratly?

> Surely there are some caring decent German people that would resist
> another Hitler and another holocaust but there are too many Germans just
> waiting to finish what Hitler started.

Why do you think so?
Only by reading a book?
Open your eyes, you are more than 50 years too late!

>Someone I know turns on his contest keyer and blasts CQ at them, following
>them when they QSY.

Hi Jeff,

Well....

There are still a few FCC monitoring stations to remain. I would contact one of them.....I did this several years ago down south in Mississippi to get a fishing company off of ten meters in the Gulf of Mexico. It worked. Probably much better than if I had tried to jamm them off the air. It took some time...but it worked.

There is nothing in Part 97 that tells hams to harrass or interfere with unlicensed or otherwise unauthorized users of our ham bands. We as hams have no enforcement authority just as a normal everyday motorist has no authority to pull over a speeder..and many of those who try end up getting shot, killed or worse...hehehe.

You stated that the person you know turns on his contest keyer and blasts CQ at them, following them when they QSY. So, what good did it do for him to begin with? They were still on the band...I mean he chased them right? Then they probably moved again...still within the band. So his efforts did no good.

You can't scare people off the bands so the best thing to do is to let the FCC do it. They still work albeit in shorter numbers but you still read and hear of people getting busted. That's because those responsible took the correct measures and did not respond emotionally (as many of us seem to do nowadays). It may take time to catch the culprits...if they are stupid enough to use our bands once, they're stupid enough to do it again and again and again. Just ask the ones who have already been caught, prosecuted, and fined.

Jamming or interfering with any communications is illegal...show me where it's not.

It's okay for you to disagree, I don't mind. You asked and I told you.

You lot clearly have never worked a weak signal in a VHF contest. The
end of TX short beep does allow you to copy the end of a marginal SSB
signal, especially when there is a lot of QSB and QRM.

> extra taking them to 0.8 volts.

I have seen the Duracell MN1500B4 quoted as 2700 mAh without test conditions given and also at 2600 mAh when connected to a 10 ohm drain for 20.2 hours per day to a terminal voltage of 0.8v. No information was given on the ambient temperature, but I would guess this spec would not be achieved below 20 deg. C. This is essentially a chemical reaction, and you must de-rate these capacities by 10% at 10 deg C and by 40% at zero (32 deg F).

My definition is objectively derived from socialism's primary
mandate - economic control and regulation. Socialist governments
take earnings and other property without permission of the owners.
That's theft. Compliance is achieved through the threat of force.
That's extortion.

If my definition is idiosyncratic, Webster's Dictionary isn't
as truthful as I thought. ;)

***** U.S.A. QSL BUREAU ******
****ANNOUNCES NEW LOW FLAT RATE OF $0.05 PER CARD****

A QSL BUREAU FOR DOMESTIC U.S.A. QSL CARDS, ALL 10
DISTRICTS, TERRITORIES AND TRUSTEESHIPS OF THE U.S.A.
A NOT FOR PROFIT ORGANIZATION BY HAMS FOR HAMS!

SEND ALL YOUR OUTGOING DOMESTIC QSL CARDS
VIA THE USA QSL BUREAU

NEW LOW RATE FOR YOUR OUTGOING CARDS;
JUST $0.05 EACH REGUARDLESS OF QUANTITY,
THAT'S JUST $5.00 PER 100 CARDS, A REAL BARGIN!!

PRESORT ALL CARDS BY DISTRICT AND SUFFIX
(IE: W1A, W1B, W4A, W4F, W4G, W4H, W5A, W5C, ETC.)

PLEASE PUT CALLSIGN OF STATION YOU ARE SENDING CARD TO IN
THE ADDRESS SECTION (BACK OF CARD) IN 3/4 INCH LETTERS!!

NO CHARGE FOR CARDS SENT TO YOU BY THE BUREAU - PLEASE KEEP AT LEAST
ONE SASE ON FILE - BUREAU WILL NOTIFY STATIONS THAT HAVE CARDS WAITING
BUT DO NOT HAVE SASE'S ON FILE - ALL CARDS GET DELIVERED!!!

START ENJOYING THE SAVINGS AND BENEFITS TODAY!!
SEND US UP TO -4- #6-3/4 (3-5/8 X 6-1/2) SASE'S (ONE STAMP EACH)
PLEASE PUT YOUR CALLSIGN IN THE UPPER LEFTHAND CORNER -OR-
YOU MAY SEND US $5.00, & YOUR CORRECT RETURN ADDRESS,
AND WE SUPPLY 10 SASE'S FOR YOU

SEND YOUR CHECK & OUTGOING QSL CARDS ALONG WITH YOUR SASE'S TO:
USA QSL BUREAU
P.O. BOX 814

==========response GM0CSZ / KN6WH
Mark, If you switch on the tx ,do you receive a carrier on a receiver ?
If so you can place a freq counter with a simple pick up antenna near
the tx antenna in the hope the freq counter's sensitivity is good
enough to receive the signal.
If you connect the output of the tx directly to the freq counter the
tx might no longer work due to its simple circuit . A second (buffer)
stage following the simple oscillator will be very helpful.
Have fun with your homebrew circuit !

mr. martin, your answer is a disgrace to the ham community. Mr.
Dunstan asked a legitimate question because he had a legitimate desire
for info. Your answer it childish and not humorous in the least.
While I am not, and will not be a 10-10 member, I accept their
activities as proper and within the law and spirit of amateur radio.

Your rudeness is uncalled for and I am sorry that someone might
believe that you represent the ham community. Heaven help us all BUT
maybe it does explain Kenwood's recent proclamations. Ham radio is
indeed dead!

3342. 2M mobile freqs

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: bob93@delphi.com
Message-ID: <RBLu8GE.bob93@delphi.com>
Source record: 223155

I know this has probably been discussed ad infinitum in the past, but
I missed it. I'm sorry. I apologize in advance for my ignorance and
stupidity in missing the discussion. I request your humble indulgence.

Here goes.....does anyone really use 144.90/145.00/145.10 simplex when
mobile? I've tried it.....got nothing.

XYL and I are headed on a little trip next week, so my question is, should
I set up those freqs in the 2 meter rig, just leave in .52 and leave it
at that, or monitor every repeater along the way...(not my idea of the best
bet...I know how a "outsider" feels when he reports that "W5 something some
thing listening seven three....to be greeted by the kerchunk of the
repeater and 40 miles of silence"

Anyway, what's the opinion of the traveling 2 meter crowd this summer..
five-two, or the other combination of "mobile simplex freqs" I've
been told about?

Thanks/73 es c u agn WX3Y

I doubt if the FCC will send any of their San Francisco staff to Hawaii
to deal with bootleg CBers. They certainly don't have that kind of money
anymore.

>There is nothing in Part 97 that tells hams to harrass or interfere
>with unlicensed or otherwise unauthorized users of our ham bands.
>We as hams have no enforcement authority just as a normal everyday
>motorist has no authority to pull over a speeder..and many of those
>who try end up getting shot, killed or worse...hehehe.

Harrass? Sending legitimate CQs over an interfereing unlicensed station
is not harrassment as I see it. Them being on 10m unlicensed could be
considered harrassment on their part.

And yes, a motorist can make a "citizen's arrest" and detain a person
suspected of commiting a crime until the authorities arrive.

>You stated that the person you know turns on his contest keyer and
>blasts CQ at them, following them when they QSY. So, what good did it
>do for him to begin with? They were still on the band...I mean he
>chased them right? Then they probably moved again...still within the
>band. So his efforts did no good.

Lots of speculation there, Jim. At this time, 10m sounds deserted -
unused frequencies are like an invitation to bootlegging. Yet if they
suspect someone might be out there listening, then common sense dictates
to stay out of that region. The CQs make the band sound as if it's in
use no matter what 10m frequency they park on.

>You can't scare people off the bands so the best thing to do is to let
>the FCC do it. They still work albeit in shorter numbers but you
>still read and hear of people getting busted. That's because those

>responsible took the correct measures and did not respond emotionally

>culprits...if they are stupid enough to use our bands once, they're
>stupid enough to do it again and again and again. Just ask the ones
>who have already been caught, prosecuted, and fined.

Look at where Hawaii is situated, Jim. We're isolated from the enforcement you speak of. Our FCC monitoring staff is gone. They left a recorded message on their Honolulu telephone that we're to call San Francisco to report any cases of interference. The "long arm of the law" isn't 2000 miles long!

>Jamming or interfering with any communications is illegal...show me
>where it's not.

You're burdened in showing *me* where sending a legitimate CQ (with call letters) over the top of interfering and illegal comms is itself illegal.

Let me ask you the following: When a jammer pops up on your local 2m repeater, do you give him a clear frequency to do his jamming? Seems to me that if someone keyed over him you would see it as "jamming or interfering." How about if two bootleggers appeared on the repeater? Would you QSY to another rptr? Or would you continue to carry on your QSO over them? Isn't the policy on most machines that of ignoring the jammer and continue normal use of the rptr as if the criminal isn't even there? Is that policy wrong?

Well Jeff... I don't have an answer for you that you'll like. But your
example is certainly a wrong answer. "Keying down" on the bootleggers,
and following them around the band to do it, is just as illegal as
bootlegging itself.

Didn't your mom ever tell you that "two wrongs don't make a right"?

(but three rights make a left...:)

3348. Controlled Substance?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <834687317.AA06615@hamlink.mn.org>
Source record: 223161

Before I begin:
-- This is not a specific commentary on the recent announcement by one manufacturer regarding their expanded sales channels.
-- The FCC (not the amateur community) is responsible for what happens OUTSIDE the amateur bands. (I don't agree with the behavior of the freebanders, etc., but it ain't my job to fix it either.)

With that disclaimer out of the way. . .

. . .I find myself in disagreement with many well-meaning folks who advocate placing restrictions on the wide availability of amateur radio equipment and supplies. These are the folks who suggest it be a crime to own amateur equipment without a license, and who are not thrilled about the fact that one national retail chain sells a line of UHF/VHF amateur equipment.

. . .While it is easy, on the surface, to agree with their goal (keeping amateur equipment out of the hands of bootleggers), I feel the attitude that amateur equipment should be treated as some sort of controlled substance is short-sighted and in fact damaging to our service.

. . .I live in a large metropolitan area. We have one full line amateur store in town. There are no other similar stores in the whole state. In the four states which border us, there are 2 more amateur radio stores. THAT'S IT! In 5 states, there are only 3 stores! In the whole country, my guess is that there are less than four dozen stores selling amateur radio equipment, antennas, and supplies! It is as though we were some secret society, bent on concealing our presence from the world.

. . .Not all that many years ago, there were at least 6 electronic stores here in town which sold amateur equipment (not exclusively, but they all had a good selection). Add to that two Heathkit stores, and even the Sears stores sold amateur transceivers for awhile. (Yes, Virginia, right there along with the Craftsman sockets and Silvertone TV sets.) In the same era, Radio Row in NYC was blocks of wall-to-wall storefronts catering to electronics experimenters. Popular Science magazine had a regular column about amateur radio, and occasional construction articles. Every second little town had an amateur radio club. Amateur Radio was a populist, Joe SixPack kind of hobby.

. . .During those years it was easy for a person to get interested in being an amateur, to shop around for the best

deal on equipment, and to meet an Elmer. We were visible to the public, and well regarded.

. . .Then somewhere along the line came the magic of 1-800 shopping, amateur radio marketing became streamlined, and radio stores disappeared from Hometown America. With the demise of the local radio store, all the Elmers disappeared into their shacks and newcomers flounder around in fancy four-color ads in back of CQ and QST magazine, trying to decide how to be a ham.

. . .Rather than continuing to restrict the availability of amateur equipment, as though we were selling assault weapons, I vote for opening up the market. Let's have radios for sale in the strip malls alongside the video games, Lionel trains, and mountain bikes. And it won't hurt if a few of us put on our Elmer-suits and lurk around to spot the likely recruits.

73, de Hans, K0HB

PS: There were less bootleggers back then, with a more open market, than there are today with our "secret handshake -- call the right 800-number and take your chances" marketing.

Photons travel at the speed of light. :-) Radio signals are photons.
The speed of light in "empty" quantum ether is approximately 186,000
miles per second. The speed of light in an atmosphere or in water
or in a conductor is considerably less than in "empty" quantum ether.
The speed of photons has nothing to do with the associated
frequency.

The mod sheet I got from Yaesu has a note following the mod that says:

"NOTE: If programming with the ADMS-1 software, read the radio first,
then put frequencies back into radio."

I believe that the ADMS-1 software assumes a certain jumper configuration (frequency range) for the FT-51. After the mod, the configuration is different, therefore the software won't work. You must read data from the radio first to tell it the software about the new configuration. Then downloading back to the radio should work ok.

>they as good as the advertisements say?

I can't speak from use-experience, but...

If you add up the total amount you need to get an all-band radio, with the noise blanker and power supply (if you don't already have one), you're already looking at the same price as a low-end YaeComWood HF radio. If all you want is 10m, there are some 10m dedicated rigs out there, too. (Ranger? if I remember correctly.) There's also always the used-rig path.

That having been said, it's supposed to be a nice rig overall.

Ten-Tec has very good service (and some say with good reason!). Plus, they're an American company, if that type of thing is a deciding factor for you.

Please respect the Followup-to: line.

======= comments GM0CSZ / KN6WH
Tony , I do enjoy manual telegraphy operating very much . However the

current arguments are not just whether 'CW is good for the hobby' but whether it is any longer necessary. Up to recently a Ham radio operator needed to have a minimal capability to receive/operate morse in order to understand that he/she caused interference to other services on a shared HF band.
Since (manual) telegraphy is being abandoned by Coastguard , merchant navy ,the military etc ,the need is no longer there and those not interested in CW see the continued requirement as an artificial way to restrict access to the HF bands and as pure elitism fiercely supported by the 'Old Guard'.
Again , CW is a most enjoyable and efficient mode of radio operating and I sincerely hope that some parts of the spectrum allocated for Ham Radio will always be available for CW operation .
But with the millenium in sight and new technology continuously being developed ,the world is moving on and so should we Ham radio operators.

Thanks Gary. Excellent points. I'd just add that even if the FCC could do everything it wished it could do, this would have no effect on piracy outside the United States. Just try getting those radios away from the Third World cab drivers! In Spanish a "lio" is a kind of a messy problem. It seems to me that LEOS on 2 meters would be a big LIO!

Source record: 223202

I've got this Ramsey Frequency Counter, good up to 600 Mhz. I use it with my MFJ SWR analyzer, and it works pretty good.

How can I (or rather, Can I) use the Freq Counter to display the transmitting freq of my transmitter? I've built a little FM transmitter with a Coil and Trimmer, but I'm having a real time figuring out what freq it's broadcasting on. And yes, I've done the math on the Cap/Coil, so I'm in the right range.

Thanks. I hope the answer isn't so simple as "Connect the Freq Ctr to the antenna output.

Hi Linda

The previous poster was correct about making contact with Ten
different 10-10 members, they can all be right next door also, when I
first joined I thought each had to be in a different state.

The fee to join is 10 dollars, however, where you send it depends upon
which state you live in.

If you e-mail me your state, I will send you the address listed in the
booklet where you should send your list.

3364. Re: HTX-202 ERROR MESSAGE

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: 72527.01012@compuserve.com
Message-ID: <4pp88p$dkv@dub-news-svc-5.compuserve.com>
Source record: 223207

The most common cause of the "ERR 2" message is using external power
with the rubber duck antenna. Most HTX-202s will put out 8 watts with 13.8
volts DC. That is too much power for a hand held with a rubber duck antenna!
RF enters into the unit through the power cord and causes the PLL to unlock,
causing the "ERR 2" condition. Try using an outside antenna, or try
an RF choke on the DC power cord. If you are handy enough, you may be
able to install a by-pass capacitor (maybe .1 uf or so) across the positive
and negative terminals of the DC jack inside the unit.

I have written and posted an article on this Usenet Group before. I have
not updated it for a while, but I am getting ready to. I have received some
new information on the HTX-202 which will be included in the updated
version, which I expect to complete in the next week or two. If you
missed the last article, you can access it at:

>that many hams on the net are not.

> Jerry

Well, Jerry, let's clarify a few things. 'Drew posts the type of
stuff you would like him to post' is _*honk*_ wrong. How the hell do
you know what *I* would 'like Drew to post' ? Unless I tell you.
So I will. I would like Drew to post nada/nil/nothing/zipshit. Now
you know, so that's straightened out.

Second, on breaks. I don't give anybody a break. Anybody who
wants a break has to ask nicely for one and *earn* it. No free
breaks in this world. Nobody ever gave me a break, I earned all mine.
Spew got up one morning and decided to be a human being. WoW. That
cancels all the things that he has ever spewed from his keyboard ? Did
I miss his apology to LAMDA ? Did I miss his apology to Japanese
Americans ? McDonalds may think that 'Spew deserves a break today',
but I don't think so.

Next. Over the weekend 'you met a bunch of QCWA and OOTC
folks'. Good for you. I hope you said hi to Cecil for me. You are
'happy to report'. Gee, I'm so glad you are happy. '(I) am not
typical of the more experienced hams'. Well, if you consider QCWA and
OOTC 'experience hams', that's correct. I don't use Geritol. I don't
walk with a cane. I don't suffer from memory loss. I don't drool. I
still have all my hair. I don't discuss my hemoroids with anyone on
75 meters, because I don't have any, and I don't use 75 meters. I can
still make the girls smile. I haven't been to the doctor in 3 years.
So you are right, I am not like a 'typical QCWA / OOTC ham'. I am
not a member of either of those organizations, but I am *the* charter
member of the NAOACC. Which is a very private club, so there is
no need to explain it to you.

Age is not synonomous with experience. Some old people (like Cecil) are very experienced. Cecil doesn't fit all the criteria I mentioned above, although he is a member of the OOTC. Cecil is an outstanding example of how a ham can be a combination of old, nice, experienced, and still not drool.

On the other hand, some old people (like Burt) are just flat out bozo's. As far as 'reporting' anything about me, you wouldn't know who I was if you tripped over me in a bar, so what the hell makes you think you are qualified to report *anything* about me ??? Do you base all the decisions you make about me on my age ? Don't tell me, you looked up my birthdate on your Callbook CD Rom. I'm impressed. Don't forget to send me a birthday card.

And finally 'Hams are pretty nice it's too bad that many hams on the net are not'. Now that's pretty astute, Jerry. But by who's standards ? Yours ? Horse pucky. Cecil is nice. Jack is nice. Jeffrey is nice. They are all on 'the net'.

You insinuate that I am 'not nice'. And you state that 'many hams on the net are not (nice)'. By reading what is posted here , you can determine which ham is 'nice' and which ham is 'not nice' ? What do you do for a living Jerry, answer the phone at the Psycho Hotline ? 1-900-CALL-JERRY ? I'm probably one of the nicest people you could ever meet. Trouble is, you would have to meet me and spend some time around me to figure that out, which you haven't. How do you define 'nice' ? The other day I came out of the club house of the golf course, and saw a little puppy who was very intent on watching everyone who came out of the snack bar with food in their hand. I watched ten or twenty people with hot dogs, candy bars, etc. walk by the puppy like he wasn't there, two guys almost ran over him with a golf cart. I called him over, petted him for a few minutes, and then I went back in the club house and bought a plate of food and brought it out and fed it to him. By your definition, if that makes me 'nice', does it make the other twenty people who ignored the puppy 'not nice' ? And because I wouldn't do the same if Spew was hungry, does that make me 'not nice' ??

You see Jerry, the puppy never did anything to deserve me to be 'not nice' to him. While Spew, on the other hand, never did anything to deserve me to be 'nice' to him. You haven't either. But if you were hungry, I would probably feed you because you are just like the puppy.

So there you have it. Keep hanging out with those QCWA and OOTC guys. Stay happy. Life's more fun that way.

We have been hearing so much about what the FCC is NOT doing.
What about what they HAVE done or what they ARE doing?

I have sought their assistance at least TWICE for interference
problems to amateur frequencies from non-amateur sources. TWICE
the FCC helped to resolve the problems.

Maybe they aren't working to the satisfaction of all those who
need things done INSTANTLY! It's kind of hard to do things
YESTERDAY when resources are being depleted but with
proper assistance, information, and time...things can and will
be resolved. I am not being naive...I am speaking from
my own experience.

And, quit expecting so much so soon!

Gary, even a trivial scrambling system would have been better than a law. Even speech inversion, for pete's sake! Anything would have been better than an unenforcable law, which isn't quite nothing, but is so close to be indistiguishable.

Sure, 800 MHz cellular bands are blocked out on scanners now. And the scanners can still receive cellphones perfectly well on the image frequencies. Anyone tried receiving them on an old TV with the 70-88 UHF channels? People can easily violate this law without ever knowing what's going on in that way.

This is what happens when politicians are asked to make technical decisions.

Garden City Amateur Radio Clubs Special Event Station

The Special Event will be held during the weekend of June 15 & 16

From 1400 to 2000 UTC (9am - 5pm EDT) each day

Operating on SSB 7.225, 14.255, 21.330 and 28.380

The station will be on the Greenfield Village grounds in Dearborn, Michigan. This special event station is in conjunction with the 100 year anniversary of the automobile and the Motor Muster Road Rally. They will be making a stop in the Detroit area.

A Special Event Station certificate that resembles a auto license plate with the club's call sign will be available to those who wish to QSL with a SASE 9x12 envelope.

QSL to:
GCARC
P.O. BOX 482
Garden City, Michigan 48136-0482

Thanks, and best wishes.

>of HF to those who wish to exercise their expertise a certain way?

Whether a Morse test is or is not a way of delimiting access to spectrum set aside for Morse usage is irrelevant (and not true anyway in the US). The purpose of a licensing exam is to satisfy certain government concerns that you'll be able to operate safely, in an orderly manner, and without causing harm to others, especially other services like life safety.

Once upon a time when life safety, military, and commercial services only had the capability to operate Morse, it was necessary for amateurs to be able to copy Morse so that they could be told to cease interfering with critical communications. That is no longer the case. In fact, life safety services have abandoned Morse usage completely, the military restricts it to certain intercept chores, and there are only a handful of commercial users left, and they will be phasing out Morse over the next two years as the international maritime requirement for digital systems comes into full force. So the Morse exam no longer serves its legitimate regulatory purpose.

Now offering Morse users protected areas in which to operate is a separate issue that is best addressed by bandplanning, not by licensing. If we wish to set aside portions of bands as Morse sanctuaries, we can do so without resorting to building such things into a licensing scheme. At present in the US, only 50.0-50.1 MHz and 144.0-144.1 MHz are set aside for exclusive Morse usage, but we can certainly petition to change that to include certain portions of HF bands as well if that appears to be necessary.

I think voluntary bandplanning is the better way to go, however, because it gives us flexibility to adjust things as usage patterns change without having to go through a lengthy rulemaking proceeding. If Morse usage increases, we can expand the Morse sanctuaries, if it declines, we can shrink them by voluntary agreements among ourselves. We don't need Big Brother to micro-manage our activities.

>two HF rigs hooked up to two different antennas, and I'm ready to
>go on this spread out stuff. When we gonna get together and talk
>shop about this project you got me working on ???

Hope those aren't narrow band HF rigs. If you're serious, get a
copy of the ARRL book on spread spectrum. HF spread spectrum is
a little tricky because of the spectrum limitations. A new approach
is probably needed. We can do a pretty good job of compressing voice
into a 4800 baud data rate. Direct sequence SS coding rate needs to be
at least four times that rate. The bandwidth needed is about double that
rate. So we should be able to squeeze something into 50KHz. Course, the
interference to narrow band signals is reduced the more you spread.
With only three direct sequence codes allowed by the FCC, that limits us
to 3 Direct Sequence SS QSOs per band if the whole HF band is used for
spreading.

For a start, I would suggest the chirp method of generating SS. How about
(are you ready for this?) a chirp SS Morse code transceiver?

I don't think you can single out Europeans as Dxers with a bad image.
Certainly the US has its share of ugly Dxers too. There are ugly Dxers
in every country with a large Dxer population. There is something about
Dxing that brings out the very worst in some people, regardless of their
nationality. Whether that is a need to dominate others by bullying in a
pileup, or a monomania for a QSL that drives them to interrupt QSOs just
for a card, some Dxers just can't put the activity in perspective. It
isn't confined to Europeans, or even Americans, but because there are
so many of them, those two groups do tend to stand out statistically.

Rich McAllister <rfm@urth.eng.sun.com> wrote:

> When I explain the situation, they lose interest since it's clear to
> them that hams are still using Morse as an artificial barrier to keep
> people like them out.

Morse testing isn't intended as a "barrier", artificial or otherwise. It tests an ability to participate in a significant part of the hobby that has been enjoyed by hams ever since there was an Amateur Radio that turns out to be also the simplest, most efficient and least expensive modes of all.

The qualification process requires demonstrating a level of expertise to meet the definitions set forth in S1.56 and other sections of the international regulations and in the United States, in sections 97.1 and 97.3(4) of the FCC Rules. In meeting those requirements, by design it doesn't provide for applicants to pick and choose which parts of the Amateur Service will be tested.

If someone sees any part of the process as a barrier, whether it's the Morse portion or any other, they apparently are not considering the hobby as a whole. Instead these people seem to believe that the Service should be tailored to fit just what interests them, so anything they don't like or have no interest in will be perceived as an "artificial barrier."

This code argument has always been around, but the debate has never been as heated as it is now. That's probably because never before have there been so many selfish people around who want to destroy a mode because they think that Amateur Radio should be turned into a single-dimensioned personal radio service, not much different from what the Citizen's Band was originally supposed to be.

Very sadly, the manufacturers and publishers agree, but probably because they believe they'll reap huge profits, so there's a lot of backing from them. As a result, we see a lot of magazine column space devoted to telling us what a wonderful thing it will be to dispense with the code, but they apparently run out of ink when they get to the part where they might otherwise be telling us that they think it'll also make them rich.

Whenever you hear an advocate strongly supporting one topic or another, whether it's this or anything else, ask yourself what's motivating them. Of course for the individuals who have only an entry level license, it's easy to see that they are very likely just looking for the instant gratification of a free privilege upgrade, but particularly because the

manufacturers and publishers literally don't advertise it, their reasons aren't likely to be as obvious. However, I believe if you look through the pages of your favorite ham magazine, the answer should be blatantly apparent.

I don't know what other publishers rates are, but the ARRL's display advertising rates are on their web page and they get around $3000 per page and much more for the gatefold covers. Add the dollar amount up for a single issue and you'll see what I mean. Of course, if the advertisers weren't making a profit from placing those ads, they wouldn't be doing it. Money, money, money... That's what it's all about and that my friends, is the probably only reason we have a no-code license in the US today.

I've had my Amateur license since I was 14 years old. With only what I saved from my school lunch money change and stuffing advertising circulars door-to-door for a neighborhood supermarket, all I could afford was a simple CW rig with a low-power transmitter built from a kit, but with that and a piece of wire hanging in a tree, I was able to get the Worked All Continents award in short order. I had a lot of fun and all these years later, I still do about the same thing and it's just as much fun.

The same can be just as true today. For $200 or so, someone of modest means can put together a kit QRP rig that puts out 5 watts (and on CW, that's all you need) and work the world with that same kind of "piece of wire" antenna. That's what the debate is all about. Whether Amateur Radio is going to be something where the average self-motivated person can enhance their personal skills and expertise and apply them to radiocommunications, have a lot of fun and at the same time contribute to being that national technical resource mentioned in 97.1(d) of the FCC Rules, or it is going to be a Service of store-bought Japanese radios that are used to entertain urban commuters and order pizza over the autopatch remains to be seen.

I still work CW, but I also operate SSB and occasionally AM. I do have a 2 meter FM transceiver, but it's quite ancillary to what I consider important in the hobby. It all still as much fun as it ever was and unless the selfish and the greedy are successful in their quest to redefine what has been the greatest and perhaps the most diversified hobby anywhere, I'm certain that it will continue to be.

I will always defend building and enhancing the hobby, but I'll never support forfeiting spectrum space or displacing one segment's enjoyment in favor of another's.

>better job with handling CB problems than the FCC does!! :-)

Just what do they do in any case.
What do they consider Causing Trouble?
They can't outlaw CB antennas and only allow ham, or satellite,
or TV antennas.
What do they do when they track someone down?
What if the person is operating a CB in their vehicle?

Just a few questions. Not in defense ofthe fringe
CB element, but just on general principle. If they
ban CB antennas today, just be careful that ham antennas
aren't next. You can't have it half way.

Exactly! And reverse patches are illegal unless a designated licensed
control operator is present at a control point to manage the third party
traffic. And if that operator is using remote radio control, that control
is auxillary operation and must take place above 222 MHz.

3381. Vibroplex Parts Source?

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: nd2k@hogph.ho.att.com
Message-ID: <4ppie3$2v8@nntpa.cb.att.com>
Source record: 223224

Is Vibroplex still in business and if so, does anyone know their tel. number and address? I do not see them in QST anymore. I need to order some parts for my old paddle.

Thanks...

Chris,

Since this is obviously addressed to me but publicly posted I will
respond publicly.

Drew got a job and is happy about it is it asking so much to be just a
little nice once in while. A lot of what Drew gets he asks for but
these groups seem to be a lot of his social life. The guy was telling
the folks he communicates with that he achieved a long sought goal. He
was sharing nitwit. Jeff Hermann who certainly represents the other end
of the code nocode spectrum could find it in his heart to congratulate
him, give it a try yourself, you and Steve. Hermann and I have
certainly had our differences but I expressed my respect for his
character in this matter publicly and privately. Instead of spewing
hate toward anyone who disagrees with you try acting on the net as you
would face to face. If we all did this these news groups would be a
more pleasant environment. If you can't repress the urge to appear a
twirp blast away.

Hani,

Try the International Morse Code Processor v3.1 at Keith Peterson's
SimTel.Net. The address is

http://www.simtel.net/simtel.net/win3/ham.html

The file is IMCPW31.ZIP and is shareware. This Windows-based program
allows you to train at speeds from 3-50 wpm. It also allows you to
customize the various code attributes. A sound card is not required.

Best regards,
Lindsay

3384. Re: Code Quick, Any Good?

Code Quik is a very good tool if you are starting CW from scratch.
I don't know what technique you used to get up to 5 WPM, but if
you still do mental conversion from sounds (Dah-dit) to visual (-.)
then you'll find Code Quik very helpful. If, on the other hand,
you already associate the sounds directly with letters, Code Quik
may not be that useful to you.

Personally, I couldn't get up to 5 WPM until I got Code Quik. Worked
wonders for me.

Source record: 223229

Should hamfest and ham swapmeets limit the items sold to only ham radio related products? A number of hams made this point when they responed to last month's question concerning "How can hamfest be improved". So I thought I'd ask the question directly this month.

The results so far show a slightly more support for "no equipment limitations"at hamfests. Visit the ham poll and cast your vote also feel free to write me your opinion on this issue and I'll post it on the ham opinion page.

3387. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4ppnmb$50n@lyra.csx.cam.ac.uk>
Source record: 223230
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

Following discussions last year the full collection is not
now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
13 June 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe

Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

The main posting is also available at:

3390. GB2RS News 16th June 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-13 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <834724008snx@llondel.demon.co.uk>
Source record: 223233
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 16th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with a request for help, which could provide the opportunity of a lifetime for a radio amateur. Raleigh International is a youth development charity which urgently requires a volunteer communications officer to join the staff team of an expedition to Uganda. The communications officer will be required to set up and maintain radio communications between project sites around the country and the expedition headquarters in Kampala, and train all members of the expedition in the use of the communications equipment. For this post applicants should be available immediately, but there is also a requirement for communications officers for other expeditions to Uganda and elsewhere throughout the year. Most postings are for three months. If you are interested, contact Mark Gregory or Harriet Wynne-Fynch at Raleigh International on 0171 371 8585 as soon as possible.

Now news of more spectacular VHF openings. On the 28th of May, Eric McWhinnie, GM0GLV, made his first 6 metre transatlantic contacts by working WA1OUB, FP5EK on Saint Pierre et Miquelon, and several Canadian stations. GM7NZI and GM7ONU also joined in the opening. On the same day, Geoff Brown, GJ4ICD, worked N4HSM/VP5 and W6JKV/VP5 on the Turks and Caicos Islands followed on the 9th by C6AIE on the Bahamas, and many American stations.

And on 2 metres, GB2RS newsreader Pat Allely, GW3KJW, was called by EB1BVO in La Coruna, Spain, after reading the news last Sunday, the 9th, on channel S21.

A group of American amateurs are attempting to win the Brendan Trophies during the ARRL Field Day next weekend, the 22nd and 23rd of June. The Brendan Trophies will be awarded to the first amateurs who can prove a two-way transatlantic contact in the 2 metre band. Full details were given in the June 1995 RadCom. The Americans' station will be set up at Kitty Hawk, North Carolina, in grid square FM26. They plan to operate a beacon on 144.175MHz from Thursday the 20th of June. They will also be operating on 6 metre SSB during the Field Day weekend. For further details, contact Peter Underhill, KD4RGD. His E-mail address is kd4rgd@vnet.net.

STELAR - Science and Technology through Educational Links with Amateur Radio - is holding its activity days on Thursday and Friday of this week, the 20th and 21st of June. Operation will be from 1600UTC on Thursday for 24 hours. It is hoped that a number of schools and colleges

will be active over this period. GB2HC, a control station at Harrogate Ladies' College, will be on the air around 3770, 7048 and 14165kHz SSB, whilst G0HCA will operate on satellite. For packet operation, GX7XWH at GB7CYM is the address. Skeds with GB2HC can be arranged by dialling the shack direct on 01423 522 285 over the period of operation.

G8ALO's 70 centimetre GB2RS news broadcast, provided in the Birmingham area, is proving very satisfactory. The plan is to make it permanent, but before this can be done at least one reserve reader is needed. He or she should be in the Birmingham area and preferably not too far from the station of G8ALO. Anyone wishing to volunteer should contact either G8ALO or GB2RS Manager Ian Kyle, GI8AYZ. Their addresses are both correct in the RSGB Call Book.

From today, Sunday the 16th of June, the Tyne/Tees area GB2RS 2 metre FM broadcast is at 9am instead of 10am. This broadcast, from the station of G0IID, has G4OLK as the first reserve newsreader, and is on channel S21, 145.525MHz.

Because of continuing difficulties with interference, the 0900, 80 metre GB2RS broadcast from G4ARZ will move to 3640kHz next month. The last broadcast on 3650kHz will be on Sunday the 30th of June. We wish to express our thanks to the newsreaders who have attempted to provide the service on the original frequency in the face of severe difficulties. It is at their request that this change has been made.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

In Uganda, Peter, ON6TT, received his licence on the 30th of May and is now active as 5X1T. He will be off the air for two weeks from Friday the 21st of June whilst on holiday in Belgium. Another new licensee in Uganda is Ake SM4ARJ, who will soon be active as 5X1AR or 5X1ARJ.

From Sable Island, CY0AA will be active from Tuesday the 18th of June until the 3rd of July on all bands from 160 metres to 70 centimetres. One station will concentrate on 6 metres: check 50.110 and 50.225MHz.

And from American Samoa, N5OLS is now active as KH8/N5OLS during his three-year posting. Check 14218 or 14224kHz SSB and around 14030kHz on CW.

Next the Rally News:

The Newbury and District Amateur Radio Society boot sale takes place today, Sunday the 16th of June, at Acland Hall and Recreation Field in Cold Ash, near Newbury. Talk-in is on 2 metres channel S22.

The Newport Amateur Radio Society junk sale takes place today, the 16th, at Brynglas Community Education Centre, Brynglas Road in Newport, Gwent. Doors open at 10.30am and talk-in by GW4EZW is on 2 metres channel S22.

The Denby Dale Amateur Radio Society annual rally also takes place today at Shelley High School, Huddersfield Road, Skelmanthorpe in West

Yorkshire.

The Southend and District Radio Society is holding a radio and computer boot sale at its club headquarters in Southend on Sunday the 7th of July. For further details contact Alan Radley, G0TTM, whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The All-Asian DX CW Contest is taking place this weekend, the 15th and 16th. The contest is of 48 hours duration, from Zero Hours UTC on Saturday. Brief rules are on page 25 of the June RadCom.

Next weekend the RSGB Summer 1.8MHz Contest takes place. The contest runs for three hours from 2100UTC on Saturday the 22nd of June, on CW only. The rules are in the September 1995 RadCom.

Next some VHF contest news:

The Second 144MHz "Backpackers" Contest takes place today, Sunday the 16th, from 0900 to 1300 UTC. The rules are in the September 1995 RadCom.

Next Sunday, the 30th of June, the RSGB 432MHz FM Contest takes place for four hours from 1800UTC. This is an ideal first contest for Novice operators, and the rules can be found in last September's RadCom.

And now the solar factual data for the period from the 3rd to the 9th of June, compiled by Neil Clarke, G0CAS:

Solar flux levels varied from 69 to 73 units and averaged 71. The 90-day solar flux average on the 9th was 70 units, the same as last week. X-Ray flux levels remained at A1 until the 7th, when they increased to A4.1 units with several sub-flares taking place. Levels then declined and averaged A1.4. Geomagnetic activity was mostly "quiet", but increased to "unsettled" with an Ap index of 18 units on the 6th. The average was Ap 7 units.

Now the ionospheric data for Central France for the period from the 31st of May to the 6th of June. The daytime highs averaged 6.6MHz whilst the darkness hour lows averaged 3.1MHz. The daytime highs took place between 2000 and 2100 hours every day, except on the 3rd when they were at 0800. The darkness hour lows took place between 0300 and 0400 hours. Over the period 12 hours of blanketing E took place, with six hours recorded on the 4th.

And lastly the solar forecast. The quiet side of the sun is expected to be looking our way and solar activity is expected to be at very low levels. Solar flux levels are expected to be in the mid to high 60s. Geomagnetic activity is expected to start the week at "unsettled" levels but decline to "quiet" levels from midweek. Ionospheric MUFs during daylight hours are expected to be about 19MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 11MHz. Sporadic E can be expected on any day.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Echo and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

How does your town handle the CB problems?

They may be able to tell someone they cannot put up an antenna (one
that can be seen anyway) but they have no jurisdiction when it comes
to telling someone they cannot transmit....that is the FCC's area. Of
course there are some local courts in Southern California who believe
they have, what I'll call, eminant jurisdiction.

DX Bulletin 29 ARLD029
From ARRL Headquarters
Newington CT June 13, 1996
To all radio amateurs

SB DX ARL ARLD029
ARLD029 DX news

This bulletin was made possible with info provided by the Yankee Clipper Contest Club PacketCluster network Tedd, KB8NW, the OPDX Bulletin, Floyd, N5FG, and Contest Corral from QST. Thanks to all.

TOGO, 5V. Roy, DL7UBA, and Lars, DL7ALM, have been busy as 5V7HR and 5V7ML, respectively, mainly on CW and a little SSB. Operations should continue until June 18. QSL 5V7HR via DL7UBA. QSL 5V7ML via DL7ALM.

SABLE ISLAND, CY0AA. Preparations continue on schedule with on the air action starting June 18. A total of three stations will eventually be up and running through the early morning hours of July 3. 432 MHz has been added to the band line-up. Look for them on the standard HF split frequencies. 6 meter operations will be on 50.110 MHz, and 50.225 MHz with a second rig if conditions warrant. QSL contacts made on 160 through 10 meters via WD8SDL. QSL VHF/UHF/satellite contacts via VE9AA. Cards sent direct including SASE, or SAE and postage, as appropriate, will be handled first. Bureau cards will be the last to be done.

MALTA, 9H. Listen for the holiday/DXpedition by PA0BEA as 9H3IE, PA3BIZ as 9H3ON, PA0TPM as 9H3TD, PE1NZA as 9H3TE, PA3CRA as 9H3UJ, PA3DES as 9H3UK, PA3EPV as 9H3WA, and PA0JR as 9H3WH from June 23 to July 6. They will active on 80 through 2 meters, 70 cm and satellites. For VHF types, their grid square will be JM75fv and for IOTA types, the designator is EU-023. QSL direct, home CBA, Dutch QSL Bureau or via their club PI4KGL.

MINAMI TORISHIMA, JD1. JG8NQJ/JD1 will return to the airwaves starting July 15 for a 3 month period. QSL via JA8CJY.

SCARBOROUGH REEF, BS7. Though starting date and other particulars vary according to the source, there is supposed to be a DXpedition

to this rare one after typhoon season ends, sometime this fall.

PALMYRA/JARVIS ISLAND, KH5, AND KINGMAN REEF, KH5K. The Northern Portugal DX Group reports rumblings from Hawaii of a possible DXpedition being in the works for Palmyra or Jarvis Island, KH5, and Kingman Reef, KH5K. Early planning stages involve a very difficult obstacle in obtaining landing permission for Kingman Reef.

CAYMAN ISLANDS, ZF. Mike, W5ZPA, and friends will operate ZF2PA, ZF2KR and ZF2MP, all signing /ZF8, as they will be on Little Cayman Island. Plans are for CW, SSB and RTTY, with CW 30 kHz up from the band edges.

BERMUDA, VP9. Paul, N1LJA, is active as N1LJA/VP9 until June 15. Try 7260, 14260, 21360, 24960 and 28460 kHz. QSL via N1LJA.

IRISH BEACON ON THE AIR. EI3DP/P was put on the air Sunday, June 9, for a transatlantic VHF propagation study to last approximately 3 months. Listen on 144.480 MHz CW for TEST DE EI3DP/P EI3DP/P EI3DP/P QTH IO41xp. The beacon, located on the southwest coast of Ireland, runs 25 watts to an 8 element quagi at 20 feet beamed at the United States and Canada, with transmissions every 60 seconds. Station op Jim Ryan, EI3DP, solicites reports from stations who may monitor his beacon. Contact him at home at 353 21 632365, work at 353 21 504744, or for attempting a two way QSO when the band is open at 353 1 2032371, which is a pager number.

PREFIX HUNTERS. To celebrate the 400th anniversary of the transfer of capital city status from Cracow to Warsaw, 3Z0WAW has been on most bands daily, both CW and SSB. QSL via SP6PBE.

The 80th anniversary of the World War One battle of Verdun is marked by the operation of stations TM1V and TM8OV through June 16. QSL TM1V via F5NPS. QSL TM8OV via F5REQ.

IOTA NOTES. Vitto, I3BQC, will be on the air from Samos Island, EU-049, and possibly others in the Aegean Island group of Greece, June 20 through July 5. Listen for SV8/I3BQC. QSL via I3BQC.

16 Venezuelan ops will activate Los Roques Island, SA-35, as 4M5LR July 18 to 21 to celebrate Venezuelan Navy Day. They will operate CW, SSB and RTTY on HF, as well as some VHF packet, 6 and 2 meter work and satellite. QSL via WS4E.

John, N6JM, will be active from several Canadian islands on 80 through 10 meters. Listen for him on Anticosti, NA-077, July 1, 2 and 3, from the Newfoundlands Coast Group, NA-198, July 9 and 10, and La Madeleine Island, NA-038, July 20 and 21.

GOOD THINGS IN A SMALL PACKAGE. A recent DXpedition provided important field, or perhaps more appropriately stated, island testing of a new amplifier design. The brainchild of two amateur radio operators, the amplifier uses two MRF154 power MOSFETs and

requires only 12 watts drive for 1KW output. A standard airline cabin case, which is carry-on luggage size, housed the whopping 16 pounds of equipment comprised of an FT-900 transceiver, the custom amp and advanced switching power supply.

THIS WEEKEND ON THE RADIO. Take your pick from the All Asian DX Contest on CW, the SMIRK and West Virginia QSO Parties. Rules for these on the air events appear in June QST on page 99.

>
>--Mark KB2els

The answer is kind of like your last sentence.
Simply capacitively couple the RF to the frequency counter. Depending on power output from your transmitter, a cheap and dirty trick is to hold the freq counter probe out a little from the transmit antenna. If the transmit power is 25 watts or so, try 3-inches. You could also hold the probe way out, like a foot or so, transmit and move probe towards (BUT DO NOT TOUCH) the antenna until you see the frequency. Alternatively, you could sample the frequency at the low power stages.

A mall store has to do $40 per square foot a month just to pay the
rent. You don't make that kind of money selling onesy twosy resistors
to the few ham builders. That's why they're taking more and more of
the parts space for higher ticket items. We should be grateful that
they still carry parts at all. If it weren't for the fact that several
of the top management team are hams, I doubt they would still be
carrying what has to be at best a breakeven product line.

I didn't, but I think we should start swinging our beams and find the
general direction in which they are coming from, and go from there.
It is time we Amateurs have to take a stand since the FCC doesn't have
the money to help us out.

What about the web site:

http://www.ualr.edu/doc/hamualr/hamualr.html

?
Included in this site is a callsign lookup. The callsign lookup data
base has up to the minute data from the FCC about (I know, only US) call
signs. We have been using this to figure out exactly when we can use
our upgraded/renewed licenses, and it has a pretty good search engine
to find names as well as call signs (and zip codes, etc.).

You are confusing wavelength/frequency and the speed of light.
If you would look at the situation of ripples of water on a pond,
you are talking about the number of ripples per foot (let us say)
and NOT how fast those ripples are moving.

So you see the speed is independant of the frequency.
Hope that helps.

Gary,
Thanks for the discourse but I respectfully submit that you've missed the
point.

1. What is used to determine access to the full Amateur Bands?
I say CW is ok, technical aptitude too. (in Ontario Canada
anyone can get driver's temporary, but they can't go on
Hiways or at dark.

You also make a point about big brother micro managing. The fact is,
Gary, that without the "state" (not yours but 'state') sanctioning amateur
radio by the coercive effect of law, amateur radio would quickly
deteriorate to the same fate as CB.

The level of state involvement is questionable, but they do have to
regulate this service.

Just a few thoughts.

What was the nature of your town's CB "problem"? TVI? Dirty words?

One could build a "stealth" antenna anyway. Wire dipole in the trees. Wire verticals. Load up a rain gutter downspout. Using a transmatch (legal) that should be no problem. Someone could make some side money installing "stealth" antennas for the CB community. AFAIK, there is no FCC reg on CB antennas other than it can't be higher than 60 feet above the house (or somesuch).

ah, go there are do what?! Last time i checked 29.75-29.80 was outside the amateur band. Assuming they are bootleggers, i doubt you'll generate much interest on the part of the FCC. Unless they are interfering with a 'paying' customer.

At least they are not ON 10 meters! FYI: I've heard quiet a few bootleggers right on the 10mtr band. Paramilitary type operations, 29.4 - 29.995+++ freebanders and even some broadcast stuff. Seems like we have enough problems right on our own bands to worry about.

Speaking of broadcasts on 10mts. Anyone ever heard the broadcasts coming over the pole? It seems that somewhere (maybe in Russia?) there are 'local-coverage' commercial radio services within the 10mtr band. I'd sure like to know where these stations are located. It would be interesting to know where the band is open to when i hear them.

Probably because, so far, the FCC hasn't pre-empted local ordinances on CB antennas the way they have (to a certain extent) for amateurs, satellite dish owners and most recently users of conventional and MMDS TV antennas.

Besides, the FCC really won't care if you interfere with illigal transmitions. I'm not saying it is right or wrong, it is the facts!

186,000 miles per second. It's not only a good idea, it's the law.

>Is this correct for every frequency, every
>wavelength? I would guess that the wavelength of a signal would have an
>effect on how fast that signal travels, but I'm obviously not sure since I'm
>posting this question. Any ideas?

Federal law sets 186,000 miles per second as the "maximum speed limit".
But just as the maximum speed limit on roads applies only under ideal driving
conditions and may be lowered depending on road or visibility conditions,
the federal radio speed limit of 186,000 miles per second only applies
in pure vacuum. In matter (defined under current law as consisting
of one or more of the 4 fundamental elements of air, water, dirt, and
fire) the speed limit is
set at slightly below the speed of light. And due to a piece of
legislature called the "dispersion bill", radio signals of different
frequencies may have *very* slightly different speeds when traveling through
air or other matter. This "dispersion bill" also is the bill that requires
that local officials place the signs you see by the side
of the highway that say "Maximum speed 65 MPH, Trucks and Cars with
Trailers 55 MPH."

Violating the 186,000 mile per second speed limit in most states will
result in a FCC ticket for a "causality violation". This is not the case
in Montana, where causality is not enforced due to a misunderstanding
of the very technical supreme court decision "Bell vs. Causality"
(often known in the pro-secular humanism press as "Bell's Inequality"
because they felt that the ruling violated Bell's basic human rights.)

If you disagree with the current limits, feel welcome to write your
senator or congressperson. And tell them I sent you!

>clint.bradford@atdbbs.com
>---

I must say, I rather enjoyed the RS exetnded warranty , on my "202".

In a brief moment of thoughtlessness, my grip upon the "202" lessenned.
I was on a roof, near the edge. (just one story).
Naturally, Newton's research was well documented, and prevailed.

The radio met the oncoming obstacle (a driveway) in inverted flight position.
The antenna was quickly removed from the unit, without first consulting the
"bayonet" style restrictions of the BNC connector.

The Tuning knob was also affected, now turning freely, as if it were a
carousel in the park, on a Sunday afternoon.

Interestingly, it _did_ power up, and operate.

This all occurred several months
after the standard warranty expired, but the sales person simply punched in
the serial number, noted that there was an extended warranty, and handed me a
brand new "202".

Only problem is that, around here anyway, the hams would have a difficult time making it over the CB'ers! 1KW mobile stations are not uncommon (with their thick steel antennas and the "big coil" in the middle) In fact, I have seen mobiles up to 2KW, complete with multiple batteries, alternators, etc. My little 10m mobile...an HR2510 with a 1/4-wave loaded whip and a measly 200 watt amp...is small stuff by comparison.

>73 de N4JVP
>Fritz

And who do you suppose is going to train them? The managers know only slightly more than the salesperson he just hired for minimum wage. A person who has the technical knowledge that customers expect Radio Shack salespeople to have can easily make $60,000 a year, so why would he/she want to work for Radio Shack?

I used to work for Radio Shack and left for one reason: The money was not there! I would gladly go back if they were hiring technically qualified people for $20 an hour, but that is never going to happen. I'll bet that if the minimum wage was dropped that they would actually try to lower the wages that they pay!

Radio Shack will defend itself by saying, "Yeah, but we pay commission!". What they don't tell you is that they don't give you commission until your commission dollars pay back the minimum wage dollars that you make during those hours that you are lucky enough to sell big-ticket items. If there is anything left, then you get it.

Unfortunately, most customers that walk into Radio Shack have a silly fuse, battery, light bulb, patch cord or phonograph needle problem.

These customers think they will get free technical advice by bugging
the local Radio Shack employee, but are shocked to find out that
most of them know little more than they do. These same customers
will go to a mall or local discount electronics chain store when it is
time to buy a big-ticket item, and they forget the guy in Radio Shack
who helped them with their last silly patch cord problem. You can't
make money at Radio Shack from commission on 19 cent resistors
or 99 cent fuses and light bulbs!

Source record: 223054

Extended warranties (service plans) are insurance policies. "You pays your money and you takes your chances" as whoever said.

I work for RS, but this isn't propaganda. For the company, see: http://www.tandy.com

Frankly, I think the svc plan on the HTX-202 is a good deal, relatively speaking. For a cellular hand-held, the service plan costs nearly ninety bucks for three years, and we sell it most of the time with new phones.

The Tandy Service Plan (or TSP as we call it) for an Amateur transceiver is about forty bucks for five years protection. It is transferable, if you sell the radio.

The plan does more than extend the manufacturer's warranty against factory defects. How many times will you drop your HT in the next five years? Current policy calls for repair or replacement if not obviously deliberately damaged, as I recall it. Company policy also calls for replacing the battery pack if it won't hold a charge any more. Know any other NiCad packs warranted for five years?

No sermon. It's your money. Glad to discuss further details by email.

Gee...Since you posted your "flame" publically I will too.

I knew some self-rightous, let's stick up for the original poster type
would come in with something like this. Please read the last message
I posted after my Walmart remark. YOU are exactly the one I wrote my
follow-up to.

And, I said in my follow-up.......#1. Mind your own business....
#2. Stick it in your ear!

>mr. martin, your answer is a disgrace to the ham community.

No....just to your response to it.

>Mr. Dunstan asked a legitimate question because he had a legitimate desire
>for info.

To which I replied privately to him and even received a reply from
Fred who is well on his way to receiving his 10-X number.

>Your answer it childish and not humorous in the least.

Only to you because if you ever cracked a smile your face would break.

>While I am not, and will not be a 10-10 member, I accept their
>activities as proper and within the law and spirit of amateur radio.

Then keep your nose out of it.

>Your rudeness is uncalled for and I am sorry that someone might
>believe that you represent the ham community. Heaven help us all BUT
>maybe it does explain Kenwood's recent proclamations.

Your interpretation. And, I only represent myself in this matter.
If you interpret mine as rudeness, I guess you are one who fights fire
with fire. I bet you even chase "Freebanders" by jamming them don't
you. Your univited response says much about you.

>Ham radio is indeed dead!

No...only your sense of humor.

Ya know, I've never eaten Cheerios with urine in them before but if
you try something different for breakfast sometime you'd feel a lot
better......Really! :)

Lighten up!

A local jurasdiction has the authority to enact an anti-antenna ordinance ONLY if it covers ALL antennas, regardless of their purpose. A ban which targets only CB antennas, and not others of the same size and height, would clearly be thrown out in court.

Soooo.... if anyone with an entry level license suggests the Morse
requirement be removed or replaced, they're just looking for a free ride.
The publishers of amateur literature and manufacturers of amateur
equipment just want a larger market.

What about folks like me, that hold a higher class of license (in my
case, the highest), have no pecuniary interest in amateur radio, and
still suggest the Morse requirement be removed or replaced?

Consider for a moment that someone who really supports amateur radio can
also believe that the Morse requirement needs to be replaced or removed.

take care!

Yes, and actually, it only appears that those ripples are moving when in
fact they are only going up and down in a circular manner.

Without clouding the issue too too much, 186,000 m/s2 is the UNIVERSAL
CONSTANT. All forms of energy travel at this speed. DC electricity has
no frequency and it travels at this speed too. The only effect on this
constant is the medium in which it travels. IE: travelling thru a vacuum,
through copper, thru air, etc.

One can really get cosmic (excuse the pun) on this subject but I hope it
answers a few of your questions.

bye.

Hi all!

The following is what Tandy has to say about the HTX-202's "ERR 2" message.
Do not listen to previous posts that say to send your radio back for
service!! The following document can be viewed directly at:

http://www.tandy.com/support/doc15/15564.txt

Other on-line help is available for most Radio Shack products at:

http://www.tandy.com/support/cb.html

It's better to get the information "straight from the horse's mouth"!!

73 de WA3RVT, Steve

---

also check out:

http://ourworld.compuserve.com/homepages/wa3rvt

For more information on the HTX-202

The following is from from Radio Shack's
http://www.tandy.com/support/doc15/15564.txt

HTX-202 (190-1120) Hints and Tips Faxback Doc. # 15564

This radio is likely to get an ERR2 when running off a cigarette lighter.
This is due to RF feedback which travels from radio to rubber duck to
power cord and back to radio. The best way to fix the ERR2 is to use an
external antenna.

When pressing f/3, it only comes up with a negative offset. In order to
come up with a positive offset, check the offset by entering VFO mode and
pressing function/8. The display reads os and a number. That number is
normally 600. It will not give any offset that puts it out of the legal
limits of 144-148 MHz.

This radio cannot be modified for expanded frequencies.

(IR/ir-09/19/95)

3432. Unlicensed Buyers

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-14 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <834757141.AA06620@hamlink.mn.org>
Source record: 223068

The DNR, in order to eliminate unlicensed fishing, has adopted
the following rules which are effective immediately.
-
Sales of fishing equipment and supplies will be restricted
to only those persons who can show a valid fishing license.
Ownership of fishing equipment by unlicensed persons is
prohibited.
-
This restriction applies to all the following:
..fishing rods and reels
..string which could be modified to use as fishing line
..fishing line which could be modified to use as string
..fishing lures
..minnows, night-crawlers, and chicken livers
..garden forks which might be used for clandestine
collection of worms by unlicensed persons
-
In addition, manufacturers of the above items can market them
only through DNR approved outlets. (The DNR will NOT approve
retail outlets, such as K-Mart, Radio Shack, or other locations
where the equipment and supplies might be viewed by the
general public in an uncontrolled manner.) Approved outlets
will normally be located distant from the intended market, and
will be limited in number.
-
If the number of licensed fishermen declines, further
restrictions on equipment sales will be considered, including
consideration of selling all the lakes and rivers to
commercial enterprises, making fishing by private individuals
illegal. Funds raised by the sale of these public assets will
be used for more deserving DNR projects, such as price
supports for mink farmers.

The DNR did not explain how these actions would eliminate
unlicensed fishers, who typically purchase equipment from
1-800 operations which advertise "habla espanol".

3433. Cell Phone Number Reprograming

Group:
Did not know if this is the proper newsgroup to post this question but here goes. I have a Motorola unit that I need to reprogram with an existing phone service number. According to AT&T Wireless Services you cannot have two cell phones with the same number as each unit sends out it's serial number with each call transaction. If anyone has information that will confirm or rebutt this, along with the number reprogramming sequence to change the cell phone number it would be greatly appreciated.
If I have posted to the wrong Newsgroup, please advise with name of the correct group.
Thanks, Jeff

>>My definition is objectively derived from socialism's primary
>>mandate - economic control and regulation. Socialist governments
>>take earnings and other property without permission of the owners.
>>That's theft. Compliance is achieved through the threat of force.
>>That's extortion.

>No. Socialism's primary mandate is the nationalization of the
>means of production.

Focusing on "means of production" is the method by which the
socialist prevents politically ignorant followers from
detecting his true motives. In fact, his platform is one
that promotes the control and enslavement of all citizens,
producers and consumers alike.

In contradiction to this trickery, Webster's clearly states
that socialism is "a theory of social organization based on
government ownership, management, and control of the means of
production AND the distribution AND exchange of goods. This
definition not only covers every aspect of the economy, but
also of the very means by which individuals sustain life.

>ALL states that produce currency participate in economic
>control and regulation.

Economic control through manipulation of the money supply
and other means is merely one tool by which socialism
empowers itself at the expense of the individual. As a case
in point, by printing currency for its own unproductive use,
and by refusing to pay its debts in a manner consistent with
economic morality, the socialist government exacts payment
for its sins through devaluation of existing currency. In so
doing, it steals from evey citizen, including the precious
"worker" which it otherwise claims to exhalt above all else.

>Socialists accept a labor theory of value. This states that
>the only value in any commodity is based on the labor that
>went into it.

Such theories are demonstrably false and serve only to bring
the socialist to power. Their promotion creates resentment
and greed within the population, uniting the masses against
an invisible and nonexistent enemy.

That said, in your example of the production of the chair, no amount of labor will render it of value if it only has two legs. It should be evident to any rational person that labor alone is not the determinant of its value.

>In exchange for this the workers receive a wage. Since
>ALL of the value that went into the object is the product
>of labor, the wage should equal the total of that labor.

No, the value of the chair is determined solely by its perceived desirability to those able to buy it. In a free society (which is NOT the goal of socialism), the buyer is allowed to determine its worth through his decision to purchase it. Government intervention in this process, through regulation of the availability and price of all chairs, denies the purchaser the right to determine the value of such products for himself. Considering that the purchaser is also a worker, governemnt has thereby forced all workers to buy necessities of life which may have a value far less than what could otherwise be justified, and has rendered those workers captive to a single source. In this way, socialism supports those in power through theft of the workers' earnings.

> Does it? No. Why not?

The Big Lie of socialism is coming up.

>Because this equation has failed to factor in profit. The
>business owners (let's posit a large number of stock holders
>for the sake of argument) do absolutely nothing for society.
>They have not had a hand in transforming the valueless
>into the valuable, yet they are still getting paid. How?
>Because, via profit, they are STEALING value from the workers.

The business owner(s) are entitled to whatever profit results from the sale of the chair by virtue of the fact that they have paid everyone concerned for the right to own it. Because they own it, they are morally entitled to sell it, scrap it, or use it themselves. They are obligated to no one.

By pitting workers against business owners (who are workers themselves), socialism grants itself absolute control over all citizens. It denies the right of the business owners to do as they wish with the products they have paid to produce, and in so doing, it denies the right of all citizens to the sovereign ownership of property.

>Thus PROFIT equals theft, not taxation.

This is ludicrous. The laborers' hours and wages are the result of entering into a VOLUNTARY agreement with the owners. Taxes demand payment from workers under THREAT OF FORCE.

>People with your mindset have fallen for the great con--the
>real thieves have deceived you into believing that the so-called
>government (which is really the collective will of the people)
>is the enemy when, in fact, it is the business owners.

What exactly is the collective will, Arden? Is it the will of 50% of the people? More? Less? Who compiles the individual opinions necessary to determine collective will? Which topics is the collective will based on? Economics? Politics? Favorite color toilet paper? Who determines the topics to be considered and their relative importance?

The summary answer to all the above may be stated in one sentence: COLLECTIVE WILL is constituted solely by opinions that are formed of, by and for the government. It is falsely claimed to represent the wishes of people who not only don't agree, but who are incapable of being homogeneously defined. It further assumes that those in government, in their infinite wisdom, know what is best for their subjects and are incapable of being seduced by the availability of unearned (and nearly unlimited) money and power. The irony to this is that creation of unearned money and power is the sole basis by which socialism survives.

In any event, there is NO such thing as COLLECTIVE WILL. It is merely a tool used to empower government at the expense of the freedoms of its citizens, and it has been used by every tyranny on the planet to subdue individual citizens for purposes of extorting their labor, property and earnings. COLLECTIVE WILL is, in fact, the will of the GOVERNMENT, not the will of the individuals which such governments claim to represent. There are NO exceptions to this in the entire history of man.

>Unless of course you ARE a business owner, in which case you
>are a thief yourself.

You certainly haven't proved it, nor will you.

Before leaving this topic, I want to mention one other thing to U.S. readers. Arden's post presents socialist views that are overtly recognizable as such to many people. However, socialism is an instrument of government that can manifest itself in many forms. Arden's view of a world in which a classless society is governed by an omnipotent government is much nearer, and considerably more likely to evolve in full, than the free society desired by our forefathers. It is the product of those who seek power over others, and our continued refusal to recognize it for what it is will lead to its certain implementation.

I will reply to the section of this post relating to spectrum and Amateur Radio in a second article.

73,
Jack WB3U

3436. Re: Radio Shack-You've got questions?-We've got BLANK STARES!

Newsgroup: rec.radio.amateur.misc

When I worked for Radio Shack (after a layoff & while job hunting)
I had a new store manager 8 times in six months (and they were ALL
quality people. Yes, technical expertise in Radio Shack is actually a
detriment to the job. Mainly because if you spend the time answering
questions, like most of us Hams like to do, then you miss out on sales.

The only ways to make it is a manager is:
1) Work 56+ hours a week and don't charge the hours.
2) Volunteer many hours to help other stores.
3) Keep an immaculate store (including the back room)
4) Sell a lot of what the district manager has up for promotions.
5) Keep the bottom line in the plus.
6) Attend all the district managers meetings.

Sales % increase was meaningless in our district, but high priority
in the one next door. Overall turnover was above 180%, but did not
include anyone who worked less than six months.
This is an indication why you get blank stares when you ask a question.
My favorite question: Do you have any X10 compatible light switches?

In a perfect vacuum, all electromagetic signals travel at the same speed
regardless of wavelength.

In a lossy medium, electromagnetic signals typically have a
velocity which is frequency dependent. This is called
dispersion. The effect is quite small in the atmosphere, but
can be quite large in things like coax.

Why is that, because they whip you so often? Gratuitous name calling
and insults are the pervue of the defeated in debate as they indicate
an inability to address the issues. This means you been whipped boy.

Steve when you post nasty stuff and it annoys me I'll post. Your third
grade name calling and implicit threats not withstanding. This isn't
the playground so screaming and name calling don't work as well as you
would like. Nor will email with implicit and explicit threats, you have
no credibility as well as a serious lack of whit.

Just to clarify for you, since you seem comprehension challenged, you were included on the original post because you just could not resist taking a cheap shot at Drew. My point was, and still is, that this newsgroup could be a far more constructive pleasant place without the type of behavior you have so adroitly demonstrated. If you want to persist in acting the fool there is little I can do but assist you. I will not make you look like a fool but I do reserve the right to amplify what you yourself do. You use the vitriolic and I'll stick with the vocabulary.

Jerry

P.S. Drew congradulations on the new job.

> Hiways or at dark.

I suggest you missed the point. What determines access to amateur bands is a government issued license. The criteria for issuing such a license is that an applicant has addressed legitimate government concerns that he is competent to operate in those bands safely and without causing harm to others. Manual Morse speed no longer addresses these legitimate government concerns, as I noted above, so use of such an exam element now represents illegitimate abuse of governmental power.

There are a number of exam elements which do address legitimate government concerns, however. Foremost among them is that an applicant must demonstrate knowledge of the "rules of the road", IE regulations pertaining to amateur operation. Also, an applicant needs to show sufficient technical knowledge to be able to recognize and rectify, or terminate, improper operation of transmitting equipment. Finally, an applicant must show sufficient knowledge to avoid being a hazard to himself or others in the operation, repair, or construction of his amateur station.

>
> The level of state involvement is questionable, but they do have to
>regulate this service.

Yes, the State has a role in managing a commons, whether it be a public throughfare or the radio spectrum. However, the State has no legitimate interest in details such as what gear I'm using to legally drive 40 MPH in a 45 MPH zone. If I choose 3rd gear or if I choose 5th gear is irrelevant to the government's legitimate concern that I obey traffic signals and don't weave into the path of other automobiles. My vehicle may not even have a 5th gear, and that's no concern of the government either as long as I can maintain safe and orderly progress down the road. Nor is it the government's business whether I choose to drive on a country lane or on a city street, as long as I obey the traffic laws and don't pose an undue hazard to other drivers.

Now as a radio amateur, you are both driver and mechanic. Not only are you expected to drive in your lane, but you are expected to keep your

vehicle's emissions within limits and you are expected to maintain your auto so that a wheel doesn't suddenly come off as you make your way down the expressway and hurl through the windshield of an oncoming vehicle, or so that your brakes don't fail when you come to an intersection. The government has no legitimate interest, however, in whether you shift gears manually or drive an automatic. That's irrelevant to the legitimate task of commons management we have charged the government with executing.

Remember that a commons is owned by all. We relinquish our unlimited property right to the commons to government management only so far as is necessary to assure safe and orderly usage of the commons by its multiple owners (us). When government goes beyond those bounds, its actions become illegitimate abuses of power. Manual Morse testing has become such an illegitimate abuse of power. Manual Morse may be useful, and it may even be fun for some, but that's as irrelevant as saying that because a Model T Ford could still be a useful vehicle, and might be fun for some to drive, therefore all drivers must be required to show mastery of manual spark advance and hand cranks in order to use public throughfares, even though they may be driving a late model Chevy, or even a Studebaker Starliner Coupe, which requires neither, but is far safer and better suited to the roadway.

Even if there are a bunch of Model Ts going down the road to an antique car show, our driver still doesn't have to demonstrate mastery of manual spark advance and hand cranks to coexist with them on the roadway. In fact, thanks to the better handling, brakes, and acceleration of his chosen vehicle, he can safely share the roadway with them even more mimbly than if he too were driving a Model T. No legitimate State interest is negatively impacted by whether our driver chooses to master manual spark and hand cranks or not as he progresses down the public throughfare. In fact, a case could be made that it is the Model T drivers who are having an adverse impact on the State interest in an effective, rapid, and safe transportation system.

Yah, that was the first thing I thought of when the LEO proposal hit the net. A whole lot of CBers will be getting lots of new equipment on two new bands...

I think LEO will have a hard time making use of the bands even if they manage to steal them. Ob Disclaimer: I'm not advocating jamming or anything here, just trying to be realistic. Hams have an awful lot invested in 2m and 70cm, and not all of them will just up and toss their rigs in the trash.

Alright

Some one had to say it. I was accused of causing tvi to a few people 2 miles from my house. I live on an 10 arce tract on a hile and have an antron 99 up and an 3 el beam. But becuse MY antenna's could be seen for miles everybody thought it was me.

I checked the aera and found six to seven houses with bleadsticks and antrons. Most of these people we running 350 1600 watts on 11m. also every bidy seems to think that cliping the limiter out of thier radios makes them get out much better. Wrong.

Anyway I went out of town for 2 months and when I got back my mail box was full of complaints from people saying I should take down my Antennas. After I proved to them that I had been out of town for 60 days they agree to stop bothering me.

What CBers need to know is that if everyone ran legal stations then 3 - 4 watts would be plenty enough to talk on .

.

>individuals who would like to end all frequency regulation
>whatsoever. However, this would OBVIOUSLY make the bands unusable.

Hold on there, Arden, its not obvious to me. Owning land
without government regulation doesn't make it unusable, nor
does owning a business, a house, a computer, or anything else.
Why couldn't I own, say, 70 MHz to 71 MHz? What would make
it unusable, and why is it reasonable to expect it to be
usable when the government grants it through a license, but
not when I own it outright?

>Thus, all of the good things we do in Ham radio, ARES, MARS,
>RACES, SAREX, Handi-Hams, would be wiped out. To paraphrase
>Hobbs, in such an environment, our "amateur radio experience"
>would be nasty, brutish and short.

Maybe, maybe not. Maybe we would all say the heck with
ham radio, sell our homestead frequencies and retire
to St. Bart.

>However, we as a people, through our representatives have
>determined that if we regulate the bands they will be more
>useful and more enjoyable than if they were left unregulated.

When did we do that? In the U.S., the great majority of
people had no voice whatsoever in determining the use to
which the spectrum was put. In fact, most of the U.S.
population wasn't even aware of the need to make such a
decision, and no representatives were elected on the basis
that they were qualified to do so.

Also, in the U.S., the final result was a mixture of the
desire by the U.S. military to confiscate all frequencies
for its own use, and Congress, who finally (by a narrow vote)
decided the military shouldn't be allowed to accrue that much
power in comparison to itself. Congress won this power
struggle only because of the Constitution of the U.S.

>Most hams WANT regulation of the ham bands because clearly
>such regulation is in the best interest of EVERYONE.

Bullcrap. Most hams want regulation because it provides
them with free spectrum.

>Is it really such a stretch to imagine that there might be
>other areas of life in which such regulation might be desirable?
>Today I got a notice from my city that I had to trim my tree.
<snip>

The remainder of this presentation serves only to accuse
the opponents of socialism of being anarchists. While I
believe that is not the case, it is irrelevant to this
discussion and does not represent my own beliefs.

>In contradiction to this trickery, Webster's clearly states
>that socialism is "a theory of social organization based on
>government ownership, management, and control of the means of
>production AND the distribution AND exchange of goods.

This is only true in regard to Marxist Socialism, not socialism in general. Webster's is hardly the final arbiter of what Socialism is. Using a dictionary to define a complex political term is utterly laughable. I, as one who, among other things, teaches the history of socialism at the college level, am vastly more qualified to define the term than are the editors of your dictionary.

>>Socialists accept a labor theory of value. This states that
>>the only value in any commodity is based on the labor that
>>went into it.

>Such theories are demonstrably false....

Then perhaps you could demonstrate them to be so....

>Their promotion creates resentment
>and greed within the population, ...

Unlike your view which engenders people to hate the government and withhold their taxes from funding the common good. Uh, Huh.....<grin>

>That said, in your example of the production of the chair,
>no amount of labor will render it of value if it only has two
>legs. It should be evident to any rational person that labor
>alone is not the determinant of its value.

I'm sorry, do you believe that this somehow proves your case?

>>In exchange for this the workers receive a wage. Since
>>ALL of the value that went into the object is the product
>>of labor, the wage should equal the total of that labor.

>No, the value of the chair is determined solely by its
>perceived desirability to those able to buy it.

OK, where did this desirability come from? Which do people actually desire? A hunk of raw iron or a metal chair? The latter obviously. What is the sole difference between these two commodities?...The

imposition of labor and nothing else.

>In a free
>society (which is NOT the goal of socialism), the buyer is
>allowed to determine its worth through his decision to
>purchase it.

This is certainly true in regard to democratic socialism. Take Volvo for example. This auto company is run under the umbrella of democratic socialism. The factories are controlled by the people not absentee stockholders. Yet the price of a Volvo is set by the free market. The two systems can easily co-exist to the benefit of everyone.

>Government intervention in this process,
>through regulation of the availability and price of all
>chairs, denies the purchaser the right to determine the
>value of such products for himself.

Sheer nonsense. Simply false.

>The Big Lie of socialism is coming up.

>>Because this equation has failed to factor in profit. The
>>business owners (let's posit a large number of stock holders
>>for the sake of argument) do absolutely nothing for society.
>>They have not had a hand in transforming the valueless
>>into the valuable, yet they are still getting paid. How?
>>Because, via profit, they are STEALING value from the workers.

>The business owner(s) are entitled to whatever profit
>results from the sale of the chair by virtue of the fact
>that they have paid everyone concerned for the right to
>own it.

The point is that they have paid LESS than the true value of the object. In other words, they have received value on the basis of fraud. That's the theory anyway.

>Because they own it, they are morally entitled
>to sell it, scrap it, or use it themselves. They are
>obligated to no one.

From the socialist perspective, they are not morally entitled to it AT ALL because they have not yet paid the full price.

>By pitting workers against business owners (who are
>workers themselves),

Business owners who actually work, deserve a wage commensurate with their actual labor. Those who merely collect dividend checks are obviously not working--they are sponging off the stolen value of their workers.

>socialism grants itself absolute
>control over all citizens.

Nonsense. That why we call democratic socialism, "democratic."

>It denies the right of the
>business owners to do as they wish with the products ...

It denies that business owners should exist at all, at least at the
production level.

>>Thus PROFIT equals theft, not taxation.

>This is ludicrous. The laborers' hours and wages are the
>result of entering into a VOLUNTARY agreement with the owners.

The victims of con games and other frauds also enter into "voluntary
agreements." Does that mean it's OK?

>Taxes demand payment from workers under THREAT OF FORCE.

Only because the majority agree that such is warranted for the benefit
of society. Those who don't pay their taxes are criminals. It is
they who are thieves by stealing the benefits of public services
without payment.

>>People with your mindset have fallen for the great con--the
>>real thieves have deceived you into believing that the so-called
>>government (which is really the collective will of the people)
>>is the enemy when, in fact, it is the business owners.

>What exactly is the collective will, Arden? Is it the
>will of 50% of the people? More?

50% plus one. Democracy--It's the worst system ever devised, except
for all the others.....

>Which topics is the collective will based on? Economics?
>Politics? Favorite color toilet paper? Who determines the
>topics to be considered and their relative importance?

At the state level you have the initiative process at your disposal.
Use it and see how far you get. If you are concerned about the
federal level, get involved in your party--participate in the platform
process or run for office.

>The summary answer to all the above may be stated in one
>sentence: COLLECTIVE WILL is constituted solely by
>opinions that are formed of, by and for the government.

Which, I maintain, represents US. There is no "government" except us.
At least not in the United States.

>It is falsely claimed to represent the wishes of people who
>not only don't agree, but who are incapable of being
>homogeneously defined. It further assumes that those in

>government, in their infinite wisdom, know what is best for
>their subjects and are incapable of being seduced by the
>availability of unearned (and nearly unlimited) money and
>power. The irony to this is that creation of unearned money
>and power is the sole basis by which socialism survives.

On the contrary, the money is most certainly "earned." In fact, it is only through the services of government--the stabilizing presence of law enforcement, the production of road and so on--that wealth is created at all. Your argument is completely irrational. It seems to be based purely on emotion.

>In any event, there is NO such thing as COLLECTIVE WILL.

Only in your imagination.

>It
>is merely a tool used to empower government at the expense
>of the freedoms of its citizens, and it has been used by
>every tyranny on the planet to subdue individual citizens
>for purposes of extorting their labor, property and earnings.
>COLLECTIVE WILL is, in fact, the will of the GOVERNMENT, not
>the will of the individuals which such governments claim to
>represent. There are NO exceptions to this in the entire
>history of man.

Really. Do you suggest that the hoards of Genghis Khan or the states of the Borgia popes used the concept of "collective will?" How about Louis XIV who said "L'etat c'est moi!" (The state is me...)? Did he use the concept of collective will to "to subdue individual citizens." I don't think so. I love America and the American system. I really get tired of selfish short-sighted individuals constantly trying to tear it down.

>Before leaving this topic, I want to mention one other
>thing to U.S. readers. Arden's post presents socialist
>views that are overtly recognizable as such to many people.

Of course. I said in the note you deleted that was intentionally playing the devil's advocate. I clearly stated that the post represented the position of Social-democracy.

>Arden's view of a world in
>which a classless society is governed by an omnipotent
>government is much nearer,

This is emphatically NOT "Arden's view" even within the post above. Among other things, I strongly support checks and balances within the government as exercised within American democracy as we know it.

>I will reply to the section of this post relating to
>spectrum and Amateur Radio in a second article.

OK, but since this is an amateur radio newsgroup, I intentionally
tried to tie the conversation to that subject, separating it out this
way takes us far off topic.

> Money can do amazing things.

If you ask KW why they are making products available through any one who cares to market their radios, Their answer is that the hobby is declining and this will somehow introduce ham radio to newcomers.

There was a time when being a dealer implied a committment and level of knowledge about the product. One opinion is that this is a one-time sale of a million or so dollars worth of equipment that looks good on KW's books. Dealers on the other hand see their slice of the pie decreased by the equipment sold by ersatz dealers who will probably discount the stock they have on hand to clear the shelves. What do you want to bet the same slob that sells x rated CDs at the local hamfest will have a KW or two on the shelf at 5 dollars over his cost.... And you wonder why there are fewer and fewer dealers at the hamfest or advertising in Cq etc....

Most radio sales require some level of technical expertise on the part of the seller. and is where will questions about packet, connection to linears or phone patches, AFSK versas FSK systems get answered? Not by Norma's Stormdoor and radio company..... How many TS-50's will adorn 27 Mhz?

If Kenwood and the other Manufacturers really want to help the hobby, How about some deep discounts for school clubs... lets get some real materials into the hands of science teachers. Lets see a Manufacturers Association that with the ARRL's help devotes some resources to growing the hobby...

How about a mobile van that travels from school to school with a full OSCAR and HF setup, with a demo team that really sells the hobby?

One guy's opinion... Whats yours?

Hi C; Well, let's clear things up here. My friend does not throw a
book on the key - he sends legitimate CQs with his callsign. Now,
what is your local repeater's policy regarding jammers? Ignore them
and carry on as if they weren't there, correct? Hmmmm, that seems
no different than what my friend does with the 10m bootleggers.

Hi!

I recently purchased a commercial Fijitsu Ten FTM40-3092H mobile and got the Service Manual and Pro-U Programming Chip. Noe, how do you (if you can) get this thing programmed into the amateur band (443.00 Mhz)????? I was able to easily tune it to 450.00 Mhz, and Fijitsu Ten service department was able to help me purchase the service manual and programming chip, but they don't know anything else. I would really appreciate it if anyone knows if I can program this rig into the amateur band.

Last I recall, the speed is the same regardless of frequency.
The speed
does change when RF is transmitted via different materials other
than free space. eg. copper wire, alumnum, etc.

I had heard that Bill Gates has a large interest in the Leo industry, although I don't know for sure that is true.

But if it is.
I wonder if the state department plans or has agreed to push hard for his choice of freq. allocations for the Leo industry. In exchange for his backing down a bit on pressing for sanctions and such agents China. For allowing or not actively cracking down on the piracy of Microsoft Software in that country. Thereby easing tense US-China relations, While helping to please the richest man in America by aiding his corporate interests, all by pushing threw a measure that will only effect a few hundred thousand US Citizens, and a handful of smaller companies that manufacture goods for them.

Scary thought! especially if there is any truth in it..

Think I might just send out another round of letters to all the elected officials in Washington DC as well as those in my state. To let them know I really don't want to see them standby and allow the reallocation of the two Bands now or in the future, Just in case they didn't get the Idea from my previous two letters.

There has been alot of bantering back and forth on this issue amongst some Hams here on the net that this might be good. The reasons are varied and support there individual concept as to what this hobby is all about. Reasoning like that because there have been no significant developments made by the amateurs lately, our technology has stagnated and the bandwidh should be put to a better and more profitable/productive use. Others look at it as a way to get rid of all those no code, FM CB'ers who call themselves Hams that are eyeing there coveted HF privileges, and want access to them with out having to learn Morse Code.

The way I see it, we all stand to loose, If they can just give away or even consider giving away the most popular and active Ham band 2M. What will go next? If the activity level and amount of personal and public investment in the band doesn't for much. How many people and companies will pump big money into buying or developing new technology and products for Freqs that can be reallocated by pressure from big money at the governments whims. Granted some of them are protected by short term treaties set up by international agreement. We all know that they can't be bought, right?.

Beyond the immediate threat of the possible loss of bandwith the threat continues. Until a more permanent solution is found, the remaining question is not if but when will we lose all access? I feel we should

press further to see that at least our current sections of the frequency spectrum as well as others are set aside perminatly by law for use by the Amateur Radio service. Sort of like the system of national Parks. When they were set up I don't think many of those of the time, would even consider the idea that a day would come that even half of all the forests that stood across the US would have been cut down. Look how much remains standing today. We may not all agree on how it is used or the test processes needed to get access to it , but at least it will be set aside for us to argue and complain about safe from accusation by corporate greed.

Just a crazy idea I had.

3470. Kenwood's new marketing plan

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-14 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4pqhh8$3s9@news.interlog.com>
Source record: 223176

Just received this message from a friend. It's very interesting
to say the least.

KENWOOD ANNOUNCES NEW DISTRIBUTION CHANNELS

Longing for a new Kenwood TS-870S or maybe a TM-733? Soon, you might find them in your local CB shop or truck stop. Citing concerns about the future of Amateur Radio and a changing business climate, Kenwood Communications Corp announced to its dealers on May 21 it's taking "some bold steps" to turn things around. Kenwood has appointed three new companies (as yet unnamed) to wholesale Kenwood Amateur Radio products "to CB radio stores, truck stops, 2-way radio stores, and electronic re-sellers," according to a letter to its dealer network.

Kenwood says it believes its new distribution strategy will benefit the hobby by increasing the visibility of its Amateur Radio line through small dealers to help draw newcomers into the hobby.

The company also says it plans to offer a new pamphlet or "primer" about Amateur Radio to introduce people to the hobby. The primer will be free. In addition, Kenwood will start selling Amateur Radio study guides and has urged its authorized dealer network to help distribute the new materials. In conjunction with its Kenwood Report--distributed to ham radio clubs--the company also plans to offer "incentives for local clubs to gain new members using the Kenwood Amateur Radio primer and licensing materials." In a May 28 letter to authorized dealers, Kenwood described the moves as "our first stage of activities to promote Amateur Radio."

Kenwood says the extra step in the new distribution chain will guarantee that existing authorized dealers always have a price advantage over the smaller resellers. The company also denied rumors that it plans to exit the Amateur Radio market.

>That's theft. Compliance is achieved through the threat of force.
>That's extortion.

[NOTE: Most of my response is simply designed to keep the discussion interesting and, ultimately, relate it back to amateur radio. While I agree with all of the below in regard to individual cases, my personal economic opinions vary pragmatically according to circumstances. I am a proud member of the Democratic party who leans toward social-democracy, but on individual issues, I can also be quite conservative.]

No. Socialism's primary mandate is the nationalization of the means of production. ALL states that produce currency participate in economic control and regulation.

Socialists accept a labor theory of value. This states that the only value in any commodity is based on the labor that went into it. Take, for example, a metal chair. When the metal it was made from was in the ground it was worthless. You might argue that even then it had value. However, the value of the land as a mine is based both on the anticipation that labor will commence there as well as the labor that went into discovering the metal in the first place. The raw material proceeds to finished product by virtue of labor. This labor, and nothing else, transforms something that is valueless into something valuable. In exchange for this the workers receive a wage. Since ALL of the value that went into the object is the product of labor, the wage should equal the total of that labor. Does it? No. Why not? Because this equation has failed to factor in profit. The business owners (let's posit a large number of stock holders for the sake of argument) do absolutely nothing for society. They have not had a hand in transforming the valueless into the valuable, yet they are still getting paid. How? Because, via profit, they are STEALING value from the workers. Thus PROFIT equals theft, not taxation.

You might argue that the business owners have taken "risk." The Socialist answers that this is utter nonsense. Their risk is essentially nil--only paper, or worse, clicks in an account register. The workers on the other hand risk their lives, the time and value.

People with your mindset have fallen for the great con--the real thieves have deceived you into believing that the so-called government (which is really the collective will of the people) is the enemy when, in fact, it is the business owners. Unless of course you ARE a business owner, in which case you are a thief yourself.

Now, getting away from economics per se, what about "regulation?" Let's use amateur radio as an example. There are no doubt individuals who would like to end all frequency regulation whatsoever. However, this would OBVIOUSLY make the bands unusable. Thus, all of the good things we do in Ham radio, ARES, MARS, RACES, SAREX, Handi-Hams, would be wiped out. To paraphrase Hobbs, in such an environment, our "amateur radio experience" would be nasty, brutish and short. However, we as a people, through our representatives have determined that if we regulate the bands they will be more useful and more enjoyable than if they were left unregulated. Most hams WANT regulation of the ham bands because clearly such regulation is in the best interest of EVERYONE.

Is it really such a stretch to imagine that there might be other areas of life in which such regulation might be desirable? Today I got a notice from my city that I had to trim my tree. The city has an ordinance that states that no tree may have branches hanging lower than ten feet into the street. I was annoyed when I first opened the letter. I don't really have time to go out an trim my tree this weekend. However, on second thought, I imagined one of my neighbors running into the tree and changed my mind. I appreciate the reminder. You might say, "well, your neighbors should look out for the tree," or ""If your neighbors don't like your tree they should move to another neighborhood." Perhaps. But if we extend this logic to every facet of life, your proposal would lead us back to a state of nature something rather similar to that of the Neanderthal in which the physically strong had the RIGHT to oppress the weak. This is the irony of the so-called "freemen." The broad application of their definition of "freedom" would make us all slaves.

After doing the modification on the radio it is no longer a stock radio as the ADMS software expects. You will need to read the radio (best to reset the radio first) and save this file as MOD.rdf. Then open the file you want to download to the radio. Go to RADIO|SEND DATA TO and click USE TEMPLATE so that it is CHECKED. Then BROWSE_TEMPLATES and select the MOD.rdf file. Now you should be able to download the file.

I have this happen several times but turning the HT off then on again has
always reset it. I think it is caused by using external power on high power
with an inadequate antenna (the rubber duck)

These are the same people who bitch, moan, and complain when the
government places other restrictions on their other hobbies and/or
lifestyle. In short, they are hypocrites.

>and who are not thrilled about the fact that one
>national retail chain sells a line of UHF/VHF amateur equipment.

I don't think many people object to Radio Shack selling amateur radio
equipment per se, I think what we object to is totally clueless morons
at Radio Shack selling amateur radio equipment without a clue as to
what they are selling. I've walked in to 3 different Radio Shacks,
asked to see the 2 meter HT, and been handed it without so much as a
"Oh, by the way, you need a valid amateur radio license to operate
that radio. We have study guides in the books section."

That is what he was saying. That he would take walks and such and use
his 2m handy as a remote to iphone. Now to me with no control operator
at the point of origin then how is he going to control the link on
simplex. He would have to control on 220 and up then.

Well for one thing you are on the freqs that packet radio usually
resides on. 145.010 is a well known packet freq used just about
everywhere in the states. The ARRL bandplan lists 144.900 to 145.100
as packet radio freqs. Most use 144.91, 145.01, 145.03, 145.05, 145.07
and 145.09 as packet freqs. Hope this helps you out.

I've heard they're a bit of a "clic" but any activity that keeps 10M looking active will help keep the bootleggers away, so we should be thankful 10-10 exists.
The name though... I believe it means "10 contacts on 10M" makes you a member - but it sure looks like something from the CB 10-code. I think that's what Jim was refering to.

With your Tech (no CW) license, you can operate above 30 MHz,
250W max power.

> If I upgrade to a Tech Plus could i operate
>also on 10m, 15m, 40m and 80m from Canada?

Assuming Tech+ means 5WPM CW, this would let you operate on
160m and 80m only. 40m through 10m require at least 12 WPM CW.
(Subject to the 250W power limit.)

>i still need guam on any band

>your 59 plus plus

>where's my card???????

You're not in the log. And even if you were, you didn't send me a dollar and an SASE. Since you aren't in the log, better send twenty.

Which reminds me of a good story, if you have a minute.

Few years back some of the more active HF guys here in Guam decided to go to KH4 for a contest weekend. Peak of the last cycle, bands wide open into Europe. So many people calling them they could hardly work anybody. The didn't do well in the contest because of the confusion, but they were there for about 10 days altogether. By the time they got back, the mail was already starting to arrive, in a week or two it started pouring in.

They got one card from a guy in Italy, and enclosed was a note and a brand new U.S. fifty dollar bill. The note said:

"I heard your station in KH4 but I couldn't work you because too many people calling you. But I still need your QSL for my DXCC".

The guy who was answering cards was a very active HF DX'er and very meticulous about answering every QSL card he ever received. So he sat down and wrote a note back to the guy in Italy which said:

"Thank you very much for the fifty dollar contribution to our DX trip to KH4. Enclosed is your QSL card. I hope next time we can work you. 73"

He then filled out a card for the Italian station and with a red magic marker he wrote across the mode entry, in big letters, "SWL".

I haven't been real active on HF lately Steve, I have a heard a few west coast stations on 20, but I think it's gonna be a while until I can hear the east coast again. Anyway, if you ever hear Japan on any band you should be able to hear me, so drop me an email with a sked and we'll give it a shot. That is, if you'd rather not send me the 20 bucks..... 8-)

>-Drew in Sunny Central Florida-
> KF4DDM

The town council in Collingdale, PA is trying to do the same thing due
to an interference complaint from a hostile woman who is running
$9.95 junk Conair telephones and other cheap electronics. She refuses
to allow high pass filters to be installed on her TV set and will not let
anybody do anything to her equipment to try to eliminate the problems.
Even though the FCC acknowledges that the problems originate in the
cheaply manufactured electronics, this woman feels that her rights are
being violated by the interference.

The person who the complaint is about is a sister of a friend of mine, so
I offered to inspect the station to see if it is running legal. She was using
a Cobra 19+ radio which put out 3.8 watts and got 50% modulation when
you screamed into the microphone! She is running a low-pass filter with
the radio and is using a Maco Alpha V5/8 antenna. Hardly a threat to
anybody!

She gave my report to the town Council and the FCC. I spoke with the
FCC directly on the phone regarding the matter. The FCC representative
said that since they did not have the manpower to inspect every station
involved in a complaint, he would accept my report as accurate, and write
a letter to the Collingdale town Council stating that any attempt to pass
laws forbidding CB antennas will not stand up in Federal Court and will
be over-turned.

The FCC agent also thanked me for volunteering my time to inspect this
station and said that he wished there were more amateur operators who
will get involved to help them out. He said that amateur operators used
to do this for them back in the 1970's but now they are few and far

between.

Come on guys! Even if you do not like or agree with CB, you may be helping your own cause by getting involved to strike down any local ordinances prohibiting antennas, no matter what service they cover. Most non-technical people will not be able to tell a CB antenna from a Ringo Ranger, and what is to stop them from banning all transmitting antennas? It is easier to squash an ordinance before it is passed than it is to go to court to get them over turned. It is also a lot cheaper too! Let's try to use our talents to help educate our CB neighbors to run clean and to educate our local officials as to what they can and can't do legally when it comes to services that are under the jurisdiction of a Federal agency!

73 de WA3RVT, Steve

3493. Not Just 2m & 70cm

jmlowman@ix.netcom.com(Jim Lowman) just cast this into the Electronic Void:

>>One of the only reasons I would go into any of the area's RS stores -
>>and only that one - was that the manager was a ham, and a member of our
>>local club. He got demoted back to salesman and reassigned to a store
>>with probably fewer customers, then was dismissed.

This is, unfortunately, quite typical.

>>This leads me to believe that RS could care less about the technical
>>background of its employees. Being a retail outlet, sales is the
>>bottom line.

You are absolutely correct. Rat Shack pays its employees lousy wages,
and is even worse to its managers. You want to make commission? OK,
but sorry, you'll have to do a day of inventory at minimum wage at least
once a week, which knocks your dollar-per-hour back to nothing. You are
a manager and want a vacation? Sure, but... gee, now that you're back,
we're transferring you to a store 2 hrs. from your house. By the way: now
that it's Christmas, we're knocking your commission *down* by 1 1/4 %.

Even if Rat Shack *did* want good, knowledgeable folks, they don't treat
them well enough to keem 'em.

Lisa KC7PSZ
(Whose spouse used to work for RS)

Most any comm program wiill work. ProComm seems to be the favorite
for DOS users. The PK-232 firmware does the RTTY, you just talk to
the box with any old comm program in plain old ASCII to make it go.
You'll find RTTY on 20m around 14.090 MHz. Many hams have switched
to PACTOR, GTOR, or Clover, and you'll find them down the band a
bit, but there's still some RTTY activity.

May had several periods of spotless days, where no sunspots were visible. Late April and early May had ten days with no spots, save for one day with a sunspot number of 13. Following this was a four day period of no spots, then an eight day period after a two day respite. Now we may be headed into another spotless period.

As we reach the bottom of this solar cycle it is interesting to look at the rise in the number of spotless days per month. An early period of no spots was April, 1995 which had over ten spotless days. After this the spotless days per month declined, and then had a fairly steady rise since August of last year. Since January of this year every month has had over ten spotless days, and May had over 15. There is a good chance that the next ten days or so could be mostly spotless, since the predicted solar flux is headed toward the mid-sixties, and is not expected to go over seventy until the end of the month.

During this period of inactivity the geomagnetic field is quiet, meaning that there is less absorption over high latitude paths.

During May some new sunspots appeared which seem to be from the upcoming solar cycle. Region 7963 appeared in the North on May 10, followed by a couple of unnumbered regions in the south on May 17 and 19. Region 7965 showed up on May 22, and 7967 on May 31.

Sunspot Numbers for June 6 through 13 were 32, 38, 29, 34, 17, 11 and 11, with a mean of 24.6. 10.7 cm flux was 72, 73, 70, 70, 69, 68, and 67.4, with a mean of 69.9.

Taking a stand will do nothing when you don't have any enforcement
powers. The FCC has reserved that for themselves.

Who needs to call anyone? :) Just look at 97.101(d)...

"No amateur operator shall willfully or maliciously interfere with or
cause interference to any radio communication or signal."

So if you are following bootleggers around the band, and making calls
(whether you think they are legitimate or not), for the purpose of
intentionally interfering with them, you are in fact in violation of
97.101(d). There is nothing in part 97 that authorizes a ham to cause
interference to any communication because he has "determined" that
communication to be illegal.

> >even there? Is that policy wrong?

Yep...ignore him. If it's an illegal station (as in unlicensed) you're
not supposed to communicate with it anyway. SOP around here (on the
machines I have a control op interest in) is to ignore the jamming
station if possible. If this is not possible, the repeater gets shut
down for while and we QSY to another (the other). But we do not start
"jamming wars". It's quite effective...we have very little trouble with
jammers on our repeaters.

> If a jammer pops up on my local 2m repeater I go out and look for him.
> I have the equipment and the experience to locate and stop jammers.

Fine idea. I support tracking down jammers. But I wonder what most people do when they find the responsible party.

In article <4pss6u$mva@newsbf02.news.aol.com>,
Daren349 <daren349@aol.com> wrote:

> I am looking for a good source for frequencies....

From the rec.radio.scanner FAQ article:

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

RadioMap has been favorably reviewed:

"... one of the most interesting reference products I've seen... ... an excellent reference tool." - RCMA Scanner Journal

"... truly an innovative product." - USSN

"...a Must Have!" - American Scannergram

Notes:

1) RadioMap is a trademark of Robert Parnass.

2) I cannot respond to electronic mail inquiries about RadioMap, so please call me some evening at the telephone number above if you have questions.

Many of your fellow cw-test-supporters would beg to differ.

>It tests an ability to participate in a significant part of the hobby that
>has been enjoyed by hams ever since there was an Amateur Radio that turns
>out to be also the simplest, most efficient and least expensive modes of
>all.

It is elegant in its simplicity, which is why I continue to struggle with it.

>The qualification process requires demonstrating a level of expertise to
>meet the definitions set forth in S1.56 and other sections of the
>international regulations and in the United States, in sections 97.1 and
>97.3(4) of the FCC Rules. In meeting those requirements, by design it
>doesn't provide for applicants to pick and choose which parts of the
>Amateur Service will be tested.

The tests in the US go far, far beyond anything required there. Also,
part of the reason the debate is so heated now is that there some possibility
of changing said international regulations in the not-too-distant future.

>If someone sees any part of the process as a barrier, whether it's the
>Morse portion or any other, they apparently are not considering the hobby
>as a whole. Instead these people seem to believe that the Service should
>be tailored to fit just what interests them, so anything they don't like
>or have no interest in will be perceived as an "artificial barrier."

It was not possible for me to see it as anything but a barrier back when my
Novice expired and I still could not do the then-required solid copy to
upgrade. It is true that I hadn't had much chance to consider the hobby as a
whole, as I was not permitted to participate in the hobby as a whole, all I
could operate as a Novice was CW, and I never could get any better at it.
After my Novice ticket expired I could no longer participate at all as long
as the solid-copy requirement remained. If that is not a barrier I don't know
what is. (The more recent comprehension test is also a barrier, albeit a
somewhat lower one -- lower enough so I could just pass the 13 wpm test).

>This code argument has always been around, but the debate has never been
>as heated as it is now. That's probably because never before have there
>been so many selfish people around who want to destroy a mode

You seem to be suggesting that nobody will learn and use morse code unless they are forced to. Hardly a good advertisement for the mode is it?

Accusations of selfishness could as easily be leveled against those who insist on retaining such artifical barriers.

> because they
>think that Amateur Radio should be turned into a single-dimensioned
>personal radio service, not much different from what the Citizen's Band
>was originally supposed to be.

That is what you claim will happen. Most of us would disagree.
If you are claiming that as our goal you should provide some evidence.

>Of course for the individuals who have only an entry level license

I've seen all license classes on the anti-code-testing side of the issue.

..
>The same can be just as true today. For $200 or so, someone of modest
>means can put together a kit QRP rig that puts out 5 watts (and on CW,
>that's all you need) and work the world with that same kind of "piece of
>wire" antenna. That's what the debate is all about. Whether Amateur Radio

>being that national technical resource mentioned in 97.1(d) of the FCC
>Rules, or it is going to be a Service of store-bought Japanese radios that
>are used to entertain urban commuters and order pizza over the autopatch
>remains to be seen.

Nothing has been proposed by anyone that would diminish your ability to do this. Why do you equate the removal of morse code testing with the demise of morse code. Can't the mode stand on its merits?

>unless the selfish and the greedy are successful in their quest to
>redefine what has been the greatest and perhaps the most diversified hobby
>anywhere, I'm certain that it will continue to be.

Neither selfish nor greedy, I would like to make ham radio more diversified still. Wouldn't you?

>I will always defend building and enhancing the hobby,

I think we are both trying to do this. We obviously differ in our views on how best to do it.

> but I'll never
>support forfeiting spectrum space or displacing one segment's enjoyment in
>favor of another's.

Yet you would keep everyone who can't do CW permanently displaced from HF. Why?

I disagree. Removing CW requirement would only strengthen the HAM
communities ability to hang on to the frequencies. There is power
in numbers, and removing the CW requirement would certainly increase
the number of active hams dramatically.

>
>Eventually, although regrettably, I also feel that hams will feel the
>pinch of technology sueeezing them ever higher in search of usable
>spectrum. However, I also feel that existing spectrum resources can
>be more efficiently utilized by projects such as LEO.
>
>-Jay Boyer N4RLL

The LEO band-grab seems very reminiscent of the way General Motors bought out community rail systems in the 40's to make way for a maximum number of GM products. (To say it's "technology" pushing hams is wrong. It's good old "politics" pushing us. Goverment is applying it's powers of imminent domain to current occupants so the "property" can be given to massive companies and/or powerful individuals such as Bill Gates and McCaw Cellular d/b/a Teledesic USA.)

The LEO systems are no different, They are a way to make all individuals pay for access to the radio spectrum on a minute by minute basis. To portray LEOs as an improvement of spectrum usage is doublethink. While we hams haven't been the best example of spectrum efficency, commercial usage has been much worse. (Unless you _really_ think satellite TV programming has no duplication and represents quality usage.)

I suspect the LEOs application to supplant/replace wireline and terrestrial telco systems will be a poor usage of our 2m and 70cm bands. Since the eventual application of this technology is to allow distribution of entertainment programming (the main use of internet accesses and the main claim to fame of LEOs) hams will have been eliminated so mom and dad could use the computer to babysit their little darlings.

Pretty ironic for ham bands to be eliminated by a technology that hams pioneered. Especially for such as useless service.

The real mistake we made was to remain (relatively) silent when 220MHz was taken, or when the spectrum sales started. We should have aggressively pushed the idea that spectrum access was more like water rights rather than private property ovnership. The die has been cast. I predict the loss of one of the two bands this go 'round. The process will eventually continue from our lowest kHz to our highest MHz as we hams can't justify free access to such valuable "property". We're obstructing _someone else's_ earning a living.

One thing I've wondered about: when these companies "buy" a slice of spectrum, how do they write off the purchase on their taxes? Is it by the ACARS method or lump sum? Is it considered "real" property or just an intangible assett? (I don't really believe that all the purchase money goes and _stays_ in the treasury. I bet it's written off and we're not really getting _anything_ in real compensation for our losses.)

I don't have the instructions right here in front of me, but as I remember
the first time of using the ADMS software it required uploading from the
radio a .def file. It uses that file to identify the hardware in the radio.
Since you changed the hardware you have to upload a new file.

>>That's theft. Compliance is achieved through the threat of force.
>>That's extortion.

>What is wrong with some economic control and regulation?
>I don't see anything about stealing there.....

Hi Enno,

The answer to your question is not simple, but it can probably
be answered reasonably well by the following:

[What is wrong with some economic control and regulation?]

First, economic control as I believe you mean it is legislated
in the name of "the public interest." Variations include the
"national interest," "public good," "society" etc.

The problem with this is that there is no such entity as
"the public." "The public" is actually only a number of
individuals. Therefore, any law that purports to place the
"public good" above the interests (rights) of private
individuals can do so in only one way - by giving the
rights of some individuals precedence over those of others.
In so doing, the government grants itself the power to deny
the rights of individuals of its choosing, in effect
reducing the rights of all to merely privelages.

If you're still not certain why this is wrong, let me know
and I will attempt to explain a few of the concepts that
differentiate moral from amoral society.

[I don't see anything about stealing there.....]

Irrespective of government-recognized paperwork such as
deeds and titles, ownership is evidenced in part by one's
ability and right to control the possession and use to
which property is put, said property having come into the
owner's possession by moral means. As such, no other
entity can exert control over the property without denying
the rights of the legitimate owner, and without ascribing

the rights of ownership to itself.

Because of this, it is not possible for government to dictate any aspect of the possession or use of earnings or property (assuming such use does not infringe upon the rights of others) without seizing the right of ownership. Further, as most citizens will naturally resist such attacks on property they own, compliance is usually achieved not by purchase or other moral means, but by threat of force.

So, in direct response to your statement, the government must deny the rights of private individuals in order to control their property. Unless such control is exercised to enforce payment of legitimate debt, it is theft. This principle applies to all forms of economic control.

>If you mean confiscating property I think you are a bit
>confused with communism or some lowlife dictatorship.

Labeling various philosophies as fascist, Marxist, communist, etc. is merely a means of describing the extent to which socialism is employed, and the exact methods by which it is enforced. All these governments share certain brutal similarities regarding confiscation of property and earnings. The underlying philosophy in every case is socialism, and the U.S. has succumbed to it as well.

As a side note, socialism may also be rightly called a form of collectivism, statism or authoritarianism. All are substantially contradictory to the efforts of our founding fathers, and it is important to realize that the U.S. was the FIRST nation in history to ever put them aside in favor of a moral society based on individual rights.

Unfortunately, the U.S. has since managed to screw this up. We are now much like the rest of the world, which has never fully grasped these concepts, let alone put them into action.

Anyway, if you are interested, I will be glad to post an example or two of socialist-sponsored confiscation and extortion in America.

73,
Jack WB3U

: >We as hams have no enforcement authority just as a normal everyday
: >motorist has no authority to pull over a speeder..and many of those
: >who try end up getting shot, killed or worse...hehehe.

: Harrass? Sending legitimate CQs over an interfereing unlicensed station
: is not harrassment as I see it. Them being on 10m unlicensed could be
: considered harrassment on their part.

As you see it. However, by unemotional examination, it comes out to
malicious interference with another station. It is irrelevant whether
that station is legal, or not.

: >Jamming or interfering with any communications is illegal...show me
: >where it's not.

: You're burdened in showing *me* where sending a legitimate CQ (with call
: letters) over the top of interfering and illegal comms is itself illegal.

It failed to be legitimate when it was repeatedly transmitted over the top
of a station that moved to get out of the way.

: Let me ask you the following: When a jammer pops up on your local 2m
: repeater, do you give him a clear frequency to do his jamming? Seems
: to me that if someone keyed over him you would see it as "jamming or
: interfering." How about if two bootleggers appeared on the repeater?

If you only did it when the jammer was on the repeater, it certainly
would be "jamming and interfering".

: Would you QSY to another rptr? Or would you continue to carry on your
: QSO over them? Isn't the policy on most machines that of ignoring the
: jammer and continue normal use of the rptr as if the criminal isn't
: even there? Is that policy wrong?

Ignoring a jammer, and continuing normal use, is fine. Abnormal use is
not.

RS's HTX-202 is a great radio, with a bad battery pack, in my case.
I'm on pack #3, all covered by the extended warranty, all shipped to
my QTH, no muss, no fuss, no blank looks. Worth it to me.

>
>I had heard that Bill Gates has a large interest in the Leo industry,
>although I don't know for sure that is true.

Gates and McCaw have formed a venture to exploit LEO satellites for digital networks. However, it appears that they are interested in what are called "Big LEOs" rather than Little LEOs. And they want *lots* more bandwidth than they can get at VHF/UHF, so they're looking at spectrum in the microwave region (Ka band). Gates and company may be eyeing our microwave allocations, but he doesn't appear interested in our VHF/UHF bands.

The US companies interested in little LEOs appear to be; Orbcomm, Starsys, VITA, CTA, E-SAT, Final Analysis Communications, GE Americom, and LEO One USA. VITA is an old friend of amateurs and doesn't appear to want our bands, but the others are another matter. E-SAT has been pushing hard for more little LEO spectrum. It appears that FAC has as well, and it was Mary Kay Williams of Final Analysis who presented the notorious paper proposing 2m and 70cm for little LEOs. GE Americom is the big money player of this bunch, and is in the process of buying Starsys, but Orbcomm has little LEO satellites in orbit (2 launched in April) already using the 148-149.9 MHz little LEO spectrum. VITA lost their first satellite (also slated to use this spectrum) due to a launch failure, and is planning a combined launch with FAC in the near future.

WRC-95 gave the little LEOs additional worldwide allocations at 399.9-401 MHz, 455-456 MHz, and 459-460 MHz in addition to the 148-149.9 MHz and 136-138 MHz allocations. FAC and Starsys want much more, and Ms. Leslie Taylor of LTA has a "vision paper" that similarly wants much more, even though only Orbcomm is currently using any of this spectrum (in the 148-149.9 MHz segment).

E-SAT has built up a potentially large customer base among electric utilities with their system for remote meter reading. And they demand new spectrum as well. (This one could be a sharing nightmare as you can imagine.) One chunk that they want is 430-440 MHz.

In other news, JPL wants to put a very high power synthetic aperture radar satellite in the 430-440 MHz spectrum as well. This would put a field strength of -87 dbW at the Earth's surface. This would likely adversely impact links and ATV operations in this band, and do really bad things to weak

signal and satellite operations. And of course the wind profiler radars are moving into the 449 MHz spectrum, impacting repeater inputs. Little LEOs aren't the only thing we need to be watching.

On another front, HF broadcasting is on the WRC-97 agenda as well. Currently, HF broadcasting is scheduled to move from AM to SSB transmission around the turn of the century, but pressure is now on for them to move to digital broadcast instead. Systems have been demonstrated which allow high quality *stereo* digital transmission in the same bandwidth occupied by an AM signal. This system is robust in the face of multipath fading and interference. It also can operate with much lower signal levels. For example, in a test I witnessed, a 50 watt DCB signal broadcast on channel with a 5,000 watt AM signal performed significantly better than the 5 kW AM signal.

This could be a mixed bag for amateurs on 40m if it is adopted. The scheduled move to SSB could have removed the hetrodyne interference suffered by amateurs, but it could also have meant a doubling of the number of international broadcast stations transmitting in our band. Given propagation, that could have resulted in much worse interference since one of the two stations occupying the spectrum currently occupied by only one station would likely always be strong at a given location. With DCB (digital compatible broadcast), the number of stations would not increase, and average power levels could go down, but the nature of the interference would change markedly. The DCB signal has a uniform spectrum throughout its occupied bandwidth. It would be a constant interference source, and one that might be more annoying to amateur ears. However, it would also be much easier to completely remove by DSP means than interfering analog speech waveforms. We could live with this, but it would mean upgrading our equipment.

Note that WRC-99 is scheduled to look at separating the 40 and 41 meter bands, but the chances are slim that we would come out of that without a net loss of spectrum. It might be better to continue to share spectrum with the international broadcasters if systems are employed that reduce the mutual interference we currently suffer. DCB may be such a system. This warrants watching closely.

Domestic AM broadcasters are also closely examining DCB, it offers the potential to put them back on a more than equal footing with FM broadcasters. I witnessed a demonstration of this technology a year ago, and it is generally *superior* to FM stereo in noise immunity and freedom from multipath fading. In fact, it could be adopted on the current FM broadcast band too, with a significant savings in occupied spectrum, IE 10 kHz per channel instead of 200 kHz per channel. If it becomes a consumer item, amateurs might consider adopting it as well. We could double the available

voice channels on 2m by using this technology, and do it without sacrificing the audio quality that we would if we went to ACSSB.

A final note on DCB, the system demonstrated can operate on the *same* channel with the existing AM service through some spectral tricks involving locking between the two signals at the transmission site. This means that, unlike the move to HDTV, DCB could be phased in without disrupting consumers. This makes the broadcasters very happy. It appears the FCC may put this one on a fast track to approval.

3520. This Week in Amateur Radio #168 (for air through 6/21/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-06-15 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <B5Lv8sZ.sanderman@delphi.com>
Source record: 223015

Here is a summary of news items covered on edition #168 of
"This Week in Amateur Radio", North America's most up-to-the-minute
audio bulletin service, for the week ending 21-Jun:
-
1. RAC Takes Action Against Threat to US Amateur Allocations
2. NASA's JPL and the Netherlands Eye 420 MHz for Satellites
3. Investigation of Ariane 501 Launch Failure Continues
4. FCC's Haller to Retire (not "resign" per errrant release)
5. STS-78 Columbia to Launch Thursday, Field Day Contacts Possible
6. Special Event Station Calendar with George Bowen, N2LQS
7. Police Officer Suspended after Bust of Young Kentucky Ham
8. Controllers Continue Efforts on Dove-OSCAR-17
9. "Amateur Radio Newsline" - Edition #983 from Los Angeles
10. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
11. Weekly Propagation Forecast
